After years of Atari abstinence I though it might by cool reentering the matter by "real mens hardware". So I got myself a nice Hades060...

that's the good part.

The bad part is: No picture :-((Tried a CRT and a TFT)

Here's the config (as far I can see):
It came with a PCI ET4000W32 card but I also tried a ET6000 I had lying around and even an ISA ET4000. There are 2 32MB SIMMs in the 1st RAM bank. All CPLD/FPGAs have heat sinks on them, so I can't tell any revision of those.
The board looks very original aka un-modded, eg. there's a 15MHz osc. fitted etc.
Just to be sure, I connected a Keyboard and an original ATARI mouse.
The power supply is checked OK.
Using a POST-card I checked the PCI voltages - they're all there. Also the bus clock is available.
An IDE harddrive's fitted but it does not matter if it's connected at power-on or not - same behaviour. No Floppy connected.

Any hints you could provide to help me reviving this beast? Is there any way to tell it's health by not having a screen output? I wish Fredi had spent the extra 6 cents for an LED or two :-/

Thanks for your help in advance!

Cheers, Axel

Hello all,

Well, I did it... I unpacked the whole archive onto my FalCT60, on an
unused partition, and copied some files from my working 2.04 version,
the most important being MROS_345.
Then I launched it under MagiC! first - it would have been nice if it
could have been patched so as to be MiNT and MagiC! friendly! - but,
unfortunately, it just caused the computer to reboot :-(
I then switched to plain TOS, 1024x768x256, connected my SC-55 to the
FalCT60, ran cafcrack, and got the display.
Loaded some MID files, they played fine. Even some that made v2.04
crash when remix with optimize display.
I had very few crashes for all the time I tested it (about 4 hours),
only 2 or 3, nothing that couldn't have happened with my 2.04.
I didn't try audio section, since my FalCT60 has no SCSI HD, but so
far as MIDI is concerned, all seems to work fine.
If someone can try the audio section and tell us what's up...

Regards,

J.-Luc

I have tried audio and midi with the complete Cubase package provided with the crack on my basic Falcon 030. I didn't find any bug, no crash when move or copy parts ! All seems to work perfect !

Do you remember when your 2 or 3 crashs occur ?
Maybe it's your custom package or the CT60 ?
Did you think to replace the SCORES35.MOD file ?

Yvan Doyeux

Did anyone scan it with virus-killer or something else?

Sorry for being paranoid, and I will give all credit and thanks to the
OP if this thing checks out, I just wanna be sure it's not some nasty
April fool's joke...

I also remember that loading songs made with a cracked version on a legal version could result in a crash.
So I think that the old cracked version saved uncorrect informations in the song file.

Is this much different from SatanDisk?

am i right in saying this is the same but plugs into the cartridge
port?

I'm not saying this to start a 'this is better' thread just for a
general comparison.

Saying that i would still be interested for around the 50GBP mark -
can't have too many gadgets!! :)

Did anyone try to measure the time it takes to boot a simple ST or Falcon
with plain TOS and not too many (or no) AUTO folder programs and desktop
accessories ? I really love(d) that TOS-in-ROM concept !

But things like FreeMiNT and NVDI slow down the boot process.

Yes : when I clicked too fast on "Close" after I loaded a midifile, when
I try to load my CueTrax, Studio and StyleTrax modules, or when I tried
and copied the Studio module I found on Atari Music french site.

> Maybe it's your custom package or the CT60 ?

I click onto "Ignore" when it asks about caches, at start, because
clicking either "5 sec." or "No" might result in hang when displaying
the start window.

> Did you think to replace the SCORES35.MOD file ?

I left the one found in the archive.

Hi, Axel!

A> Just to be sure, I connected a Keyboard and an original ATARI mouse.
[...]
A> An IDE harddrive's fitted but it does not matter if it's connected at
A> power-on or not - same behaviour. No Floppy connected.

Well, for Ataris it's usually helpful to have a floppy inserted - its presence/boot sector is checked when booting and at least without floppy in the drive the Atari will take very long to boot. Never tried without floppy drive...

Is there a keyboard-click? If yes, then at least some minimal initialisation has been successful.

Where do you live? Maybe there is someone close to you with another Hades to do some "exchange the parts" tests...

Regards,

Alexander

> so do I. Please let us know if you're lucky or not...

I got the printer yesterday, and once I figured out that it didn't like the printer sharing device that I had been using to have two computers connected via the parallel port, it worked straightaway with my Hades.

I can print from Papyrus fine (using MintNet/N_AES) without any need to change any printer drivers etc, and I can also print from Cubase running in single TOS.

The quality is excellent, and the printer is much faster than the HP deskjet 600 which is replaces.

I have been able to connect the other computer via the USB port which this printer also has.

It was not a cheap option as printers go these days, (130 UK pounds) but it is designed to be used by a small business, so I hope it will give several years of service.

Thanks to all for the helpful suggestions while I was choosing which printer to get.

Cheers

Paul (W)

Hi Paul,

I'm sorry I didn't get into the thread (my CT60 is down, and I don't log on to CSAST as often as I used to). Anyhow, PCL3 was the primary printer language HP used in the 300 dpi days, and selecting a HP 500 or 600 series driver will generally give you PCL3. Laser printers extended the command set through PCL4 and PCL5 before the invention of PCL6, which has nothing whatever to do with PCL1 - 5.

I am glad to glad to hear that a PCL3e printer understands the stock PCL3 generated by the Hades. This makes logical sense, but what is sensible is not always what is true.

Galen

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at

http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

First of all: Thanks for helping, Alexander! (Daaaaankeeeesch=F6=F6=F6=F6n!)

Ok, so I've connected a floppy and it did some sort of minimal
seeking. So it might check for something bootable (which I don't
have).
Just for the fun of it, I've inserted a random DOS floppy, just so the
Hades has something to chew on. No change...

To be really, really sure, I've ripped the poor Hades out of its case
and let it run "naked" to prevent any shortings.
This brought me a bit further in the way that the connected monitor
now syncs (i.e. detects a signal) to 76Hz, but still no picture. Just
black.

> Is there a keyboard-click? If yes, then at least some minimal initialisat=
ion has been successful.

Good idea... need to find a "victim-pc" to rip out his speaker... give
me some time after eastern.

What I can tell is that the keyboard LEDs do work (Caps, Numlock) but I guess that's handled by the keyboard controller, so no real sign of life.

> Where do you live? Maybe there is someone close to you with another Hades
> to do some "exchange the parts" tests...

Hamburg, Germany. Any takers?

Cheers & happy Eastern, Axel

The Hades should give you at least the black and white Medusa logo at

boottime. That doesn't depend on the graphic card as far as I know.
Can't tell you now as my Hades is dead too. :-(

Long time ago when I recieved my Hades I had exactly the same. No display at all. It ended up in a new motherboard. At that time there were new boards available but now ...

CU,
Martin

Hello,

Can't access the server :-(
I found a program named Karatos within my own archive, and wanted to check if it's already available, but couldn't connect :-(

Regards,

J.-Luc

When I restarted the DarkForce! BBS, it was for the same reason that I first started it up in the early 90's. Namely, to contribute to, participate in, and give back to, the Atari community, all that I've gotten from it.

With that in mind, here is what DarkForce! did in the year 2006:

January 2006
1. $25.00 - Slor
2. ST Mag - Doc Rotcod

February 2006
1. $25.00 - Morden
2. ST Mag - Showa

March 2006
1. $25.00 - Mark Chitti
2. ST Mag - Arch Mage
3. DGS 8Bit CDROM - Stephen

April 2006
1. $25.00 - Slor
2. ST Mag - Sthelir

May 2006

1. $25.00 - None (rolled over to next month)
2. ST Mag - J_D
3. PEST   - Zeptari
4. USBcart - almostrice

June 2006
1. $50.00 - None (rolled over to next month)
2. ST Mag - DocClu

July 2006
1. $75.00 - AlmostRice
2. ST Mag - Pantera

August 2006
1. ST Mag - Gemini8

September 2006
1. ST Mag - Wulfie

October 2006
1. ST Mag - Dew_it

November 2006
1. ST Mag - Sauron

December 2006
1. ST Mag - Callaghan
2. Mega STe motherboard - Doc Clue
3. Guderian (8bit game) - JeLLe

Glad to be of service, folks! :)

Hello,

This problem only occurs under plain TOS, on my FalCT60, but I noticed it on my old MegaST-4 with Crazy-Dots : when in high resolutions, 1024x768x256 for instance, the amount of files displayed into an opened directory window differs from the one it really contains.
The problem can be seen (in french only, sorry) here :
http://site.voila.fr/cejiel/Copies_ecran.htm
The 1st screen shows what is displayed under MagiC!, 1024x768, but it has no importance, and, moreover, I opened D: partition instead of E: :-(
The 2nd one is more relevant : it shows that only 20 objects are displayed into C:, while the status bar states there should be 39, and D: displays only 6 objects instead of the 11 stated.
If I could increase the resolution, there would be even less objects displayed.
Did someone ever notice this strange behaviour ?

Regards, and merry Eastern,

J.-Luc

The server is certainly not down. I went there just a minute ago.

Karatos is not on the server, at least not under that name.

HTH,
Martin

Some HP printers are fine working this way, others get upset. There used to
be a document on the web listing which were OK and which were not, but I
don't have the link handy or the time to search... I know the BusinessJet
1100's we have at work are OK like this, but I also know we had issues with
some older printers....

>

If its like the 1100 it ships with "standard life" print heads (not
cartridges) which I think are good for about 10,000 sheets. They are not
cheap to replace, but on the 1100 you can get an extended life version....

OK, then I'll give it another try and upload the zip file.
It contains docs in both german and english.
It's a TTP karaoke program for TOS.

Regards,
```

I found what was wrong : there was garbage at the end of my aFTP host
file, where the new adress of the server was recorded, that prevented
the connection to achieve :-(
I edited it and cleaned it, and could upload the zip.

My understanding is that it will plug to the ACSI port, whereas the
satandisk will plug into the cart port. So you can have the cart port
free for an ethernec/netusbee :)

I'll put you in the 'maybe' list then!

Hi Folks,

Seems I'm cursed this week. Been meaning to repost my atari stuff, for
posterity etc. Finally get round to it: dead raid. No matter, then dead
windoze box. Both backup cd's unreadable. Anyone got a mirror of my old
site?

[pissed off]
Swampdog

Anyone who said cd's will last 80 years is a t*ss*r!

Hello,

wow, this is really funny ;-) It happens probably only at higher resolutions since I use 800x608 for ages on my falcon and no similar behaviour.

Maybe trying Teradesk would be a good idea and if here is ok too, it's definitely bug in TOS.. Btw what TOS version did you use?

Know what ? this is a really sensible suggestion! I'll try it asap :-)
It's TOS 4.04, but it happened too on my MegaST-4, with TOS 2.06 (it
was bi-TOS).

Thanks,

J.-Luc

Hello again,

To make it short : it was a problem with TOS altering NEWDESK.INF
when saving it :-(
Editing the file and cleaning it made the 2nd part of the files
accessable with horizontal slider (when, previously, date and time
was displayed, as I set them to be displayed).

Regards,

J.-Luc

Just a change, if I may?

Cheshunt Computer Club should be the URL listed in my sig. The direct one may change in the future, which would could lead to people floundering :-)

Any space on your list for DDP Translations? http://ddp.atari.org

I know it hasn't been updated for some time.

Thanks for this resource!

That should have been 'partitioned', sorry.

Never format a direct access medium, unless it is so full of
read/write errors that it would be useless anyway.

Folks,

I am considering getting some Eiffel boards etched and drilled. At present I don't have enough interest to justify commercial production, but if there was enough interest I could be tempted. So assuming I could get bare PCBs drilled and etched would anyone be interested in:-

1. Etched and Drilled boards, original design no temp sensor => you to supply all parts and build.
2. Boards with a pre-programmed PIC chips => you supply other components
3. Complete kits of parts.=> You build
4. Built and Test boards => you need to connect in to PC.

I hope to have some costs soon and I will update when available. Please e-mail the adress in the header with any expression of interest,

Dave

OK, I have Old World ROM machines. Currently setup is my Mac 9600-200
in which I installed MagiCMac for OS9 under. So if i run MagiCMac for
OS9 on my 9600 I already have everything I need? If so how do I
configure it, IConnect, or whatever is required to get it to work?

I do remember years ago on the MagiC Support Site http://magic-sides.de
that people had access to the Mac OS9 TCP on 2nd and 3rd generation
iMacs so there was some software or feature to allow them on New World
Machines to use the Mac OS TCP.

As Henk already pointed out, your device is 6.0, as displayed by the ID
check, not 1.7.

> 1.1.1 - There should be no HDDRIVER.PRG in the auto folder?

Right.

> 1.2 - This states that the program is installed to the root (boot)
> drive as hddriver.sys but then says if run from a floppy it needs to
> be .prg.   Are .sys and .prg mutually exclusive?

.sys is used when booting from hard disk, .prg when booting from floppy
(AUTO folder).

Hi David,

> Did you mean boards to build, or completed boards?

I meant complete boards.

In the meantime someone contacted me so hopefully I'll get the ordered
Eiffel boards soon.

Nevertheless thank you very much for your help.

Regards,

Frank

Hi,

>In your previous post it was bus 1 unit 6 :-)

Yes I twigged that after re-reading my post. Not sure how that
happend as it is now being shown as 1.7.

>Use HDRUTIL and perform a autoconfigure (rightmost menu title)
>
>reset

Ok, success! It all works now and I can see the ZIP drive in all it's
glory.   Thanks for your advice!

>If you dont use TOS, I dont know, unless you use Mint/XaAES/Teradesk.

Well funny you should mention that. Now I have a backup of the C:\
drive I'm going to install one of the MiNT distributions along with
the free AES. What are people suggestions?

Also does anyone know where I can find an English install doc for the
EasyMiNT or one of the simpler distributions?

Thanks
Dave

Hi Paul,

PW>Does anyone know if an hp business inkjet 1200d printer will work on
PW>an Atari ? I need to replace the printer on my Hades, which I use in
PW>single TOS to print from Cubase Score, and also in MintNet to print
PW>from Papyrus.
I'm not really sure, but I suppose very strongly that the mentioned
printer will *not* work with any - not emulated - Atari.

For last year I had to make some bad experience with a recent HP laser
printer:

Trying to put out one single character (even ESC...) stopped my TT's
TOS at once. Ok, inkjet is unequal to laser, but HP printers used to
be compatible to one another.

Sorry! But please do tell me if I'm wrong!

Peter

Hi,

I have an Eizo flexscan 6550 monitor that has been bubble wrapped up
in my garage for ages. I bought this with a TT a year or so ago and
dont have the room for it.

Last time it was connected to the TT it worked fine and the quality
was great. This thing must have cost a few thousand when new.

I'm located in Bedfordshire in the United Kingdom and so anyone wants
it and who can pick it up is welcome to it.

As the subject line say this monitor is free to a good home!!!

Please don't ask if I can ship this because...

a) it weighs a ton and would cost a fortune
b) it would be a bit of a chore for me finding boxes and packing it up.

I will re-test this prior to collection.

Dave

Hi,

Does anyone have a version of Highsoft BASIC later than 2.02 that
they want to sell?

Is anyone running this under MiNT?

Thanks
Dave

It says it supports:-

"HP High Performance Architecture PCL3"

If this is the same as PCL3 then it should work fine....

Some recent HP Laser only support PCL6 which is not backwards compatible with PCL5

http://www.csgnetwork.com/hppclhist.html

has some info but a google search on PCL6 and compatability will yield many more.

Thanks for the information. I will be quite pleased if I can print
300 x 300. I suspect that is what I get at the moment using my
HP Deskjet 600. My printer is also connected to a Linux PC, so I can use
the higher resolutions from that for photo printing etc. It is mostly my
music printing from Cubase that I really have to use the Atari for, and
that looks fine in 300 x 300.

Cheers

Paul

That is not hopeful news. I'm told that the 1200d uses PCL3
(Printer Command Language level 3). Do you know if your laser uses that
or some other language ?

Cheers

Paul

Thanks for the information. It crossed in the post with my reply to
Peter's post, and has answered several of my questions.  (Although there
still remaind the "If" at the start of your sentence above ...)

Cheers

Paul

> OS9 under

Mac OS 9? Why? I've a PowerMac G3-MT@399MHz (overclocked) too and it
still works fine under Mac OS 8.6...
```

> So if i run MagiCMac for OS9 on my 9600 I already have everything I
> need?

Yoh! But for your machine IMHO Mac OS 7.6.1 would be enough (small and beautiful) if you don't have HDs bigger than 4 GB and Mac OS 8.6 (not so small but much more beautiful) has simply all you need - Mac OS 9 is just overkill! BTW: You properly would need FPUPATCH.TOS...

> If so how do I configure it

First of all: Configure your Mac TCP/IP connections - you need a working Mac TCP/IP network! Than copy from the Mac OS folder inside MacTCP-Connect-Disk MacSTip somewhere you can find it; now change into MM and run SETUP.PRG from the MAGIC folder - therefore you need BTW a serial, but you can simply use your CrAB 2.8 serial!

SETUP.PRG will install a very old PPP-Connect, so be careful and make before running it a buckup of your PPP folder and from SOCKETS.PRG inside your AUTO folder! After running SETUP.PRG restore your PPP folder by overwriting it with your backup and SOCKETS.PRG - now you should've STIP.PRG inside your PPP folder and AUTOSTIP.PRG inside AUTO folder and a new CAB.OVL - that's all you need!

> IConnect, or whatever is required to get it to work?

Yoh! With ICONF.PRG you configure now ICONNECT to work /via Mac-OS/ and that's normally all - but you also can tune it a littel bit using the Pro mode: Increase eg the DNS-Cache at 256 KByte and adjust the MTU at 1492 and TTL at ~ 117... and don't forget to store it!

After that change to Mac OS and start MacSTip manually - it will open the Mac TCP/IP network for ICONNECT! Now change to MM run ICONNECT and enjoy speed with CrAB or HIGHWIRE (with iconnect.ovl as network.ovl)...

> I do remember years ago on the MagiC Support Site http://magic-sides.de

I never used Mac OS 9 - I change after G3-MT to Win32 and use w2k now; therefore I've M_PC too but normally don't used it... my 68k-Macs under MM are fast enough for me!

Ups! If you've also iFusion (STiK/STinG over IConnect) than you really
should've everything you (properly ever) need... ;-)

BTW: And don't forget to add AUTOSTIP.PRG into AUTOEXEC.BAT!

To be honest I would expect it to work. I don't have one to test, which is
why I can't be certain. On the other hand the modern lasers that only
support PCL6 definitley won't work. Its not backward compatible....

Good to hear that everything works now as it should!
Just in case you are not aware of it: You can use the ZIPCTRL tool on
the HDDRIVER driver disk to control certain features of your ZIP, in
particular password protection and motor sleep time.

Hi Paul,

This program just may be of interest..

http://www.printcapture.com/

It basically turns your PC into a serial printer. Captures the data from an ST or whatever, and turns it into a bitmap on the PC. I use it as it's easy. :-)

Aly

Hello,

I have been using a LaserJet 4+ with both my FalCT60 and TT, and now
I'm using a Lexmark Optra S1250.
I can print from Calamus, QED, straight from desktop, and never had
my machines stopped.
I hooked an Epson Stylus 800 too, to print a 80x80 cm page (tiled,
of course!) using DA's Layout and Calamus. It gave me far better
colours than a DeskJet 560 and Canon I-don't-remember-what...
Also, my old Canon BJ-130e did work fine - better than the BJ-10e ;-)
BJ-130e, Stylus 800, DA's Layout : that was under TOS, long ago,
now I use MagiC! and all works (nearly) fine ;-)

Regards,

J.-Luc

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap

Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Thanks for the link. It looks an interesting way to do things, but I've
ordered the printer now - and I'm keeping my fingers crossed in the hope
it will work.

Cheers

Paul

Hi Paul,

PW>That is not hopeful news. I'm told that the 1200d uses PCL3 (Printer
PW>Command Language level 3). Do you know if your laser uses that or some
PW>other language ?
I tried to help a friend and was disappointed that I was not able to output a single character for I'd hoped I could maybe use ESC sequences for or to put the driver into a different PCL or make it compatible to a printer suitable to an Atari's parallel port.

My TOS (I think it's 3.06 or so) stopped immediately. Having hooked both printers (the 13xx laser and my 5L) to a switchbox, I was able to "reanimate" my TT by turning over to the 5L.

The only chance I saw for my friend was to print into a file, bring this file to his PC (by floppy or CD, problem: he had no burner with his ST, and maybe no floppy drive with his PC, sorry but I don't like Mr Gates) and then print from DOS or Windows to the LPT1: port.

But how to explain this to a real "user" (no expert)?

As my 5L prints fine, I don't know when to face the same problem as yours.

But I appreciate any hint to a laser or deskjet printer (probably not HP) that is capable to print from an Atari's parallel port as we have been doing for so many years...

Last remark for now: I asked in thae German Atari forum, if it's maybe possible to configure that HP printer on a PC, save the configuration, and use it further on the Atari. But Michael Ruge, one of the experts answered: No chance.

Paul, I'm so sorry for the bad news, and still I hope to be proved wrong, but perhaps I can save you some money (if you don't buy a HP).

Und TTsch�

I'm pleased to report that Roger Burrows has wrapped this code up in a
nice patcher program. It's for MagiC versions 5.xx and 6.xx, is
reversable, and is available for download from the MISC section of my
web site, URL in sig.

April Fools' Day 2007,

More than ten years after Steinberg's withdrawal from the Atari Market,
here is a new crack called CAFCRACK for Cubase Audio Falcon 2.06.
Of course with this crack, you needn't the 128 bits key dongle plugged
on your Falcon. (OKI japan M7H007-024 SYNS0 E 3432351)
This crack is better than other existing Cubase Audio cracks on Atari.
This cute hack is the result of months of tough research.

Attention was turned to Cubase stability and data integrity which were the lack of the other previous cracks.

You must understand that it's impossible to know if this crack is perfect. If you encounter any bugs you can report them on Atari newsgroups or forums.

There are only 2 drawbacks (I think they are minor):
- Cubase takes up more memory (+25%).
- Each part or track data needs twice more memory size (192 bytes instead of 96) but no influence on MIDI events.

But one thing is sure: this is the BEST crack ever made for Cubase Audio Falcon!

You must put in the same folder CAFCRACK.PRG and CAF_206.PRG of your current Cubase folder. CAF_206.PRG needs to be unpacked. If you are using the cubase score editor, you must put a specific patched SCORES35.MOD file in the MODULES folder. Be sure that the files attributes are not in read-only mode.
Data is written in SCORES35.MOD for each cubase launch with CAFCRACK.

You will find in CAFCRACK.ZIP:
- Unpacked CAF_206.PRG
- Patched SCORES35.MOD
- CAFCRACK.PRG
- CAFCRACK.TXT

http://jeanpatatari.site.voila.fr/cafcrack/v1/CAFCRACK.ZIP

I've just finished my latest project, Windows Vista for ATARI ST.

Now you can play all the latest PC games on your ST - without any additional hardware. Because of my superb program code, all Windows Vista compatible programs will work in all the ST's resolutions.

Windows Vista ST will be available on disk, CD or punchcards.

Here's the website :

Well I was able to acquire MacSTip last week but the file was corrupt in some way as no OS9 or OSX utility was able to with the file. So I am still out of luck but have learned quite a bit the past month about the topic.

I received a Falcon and almost everything seems in order except Im
missing a few pieces. I was wondering if anybody happen to have a
spare floppy disk mount (mine is just sitting in the case loose), and
a "." key (the one on the numeric keypad between the "0" and "ENTER"

key)? I can pay somebody for these, just let me know.

Thanks,
Chris Ryan

I have no idea what is supposed to be in there to begin with. I assume it was mounted to the case via something. If they are standoffs then that would be great! I would love to get them.

Thanks,
-Chris

"Mark Bedingfield" <mark@nomorespamplease.computercom.com.au> >
> Besides, your Atari ST will be faster than a Vista PC now;-) Jeeeeezzzz
> it is crap.

>
> Mark

Yes, Vista is absolutely terrible. I sorted out the next door's wireless a few weeks back and they have a new Vista laptop. Always I reboot the machines a few times to make sure they retain the WPA/WEP stuff in their profile.

Talk about sloooooowww. It's like 5-minutes odd to boot up on a brand new laptop with so much anti-virus shit and gizmo crap on it. My IBM 486 laptop running 95 is faster than theirs. And mine is 15-years old!!

Glad I was there in the 80's.... No really, I am so glad.

This machine I'm typing this on is an AMD Athlon 2600+ running 98SE, 512MBytes of RAM, a 3COM 54b adapter. It boots in 10-seconds flat.

FamilyNet International Newsgate

I asked for 50 users, we now have 56. ;)

This will be my last message on this for quite some time. However, a while back there was said there would be no CT60 for the TT030. The developer stated (looking back) that there was no interest in the TT030, getting only 30 people to sign up. We now have nearly 60. And that is just for individual users. I'm sure once this is a viable product that more would definately want this product.

While 60 users might still not be the size of a the Falcon base of users, there is definately a lot more than 30 out there.

Final message to Rodolphe, the developer of the CT60, is that there is potential business to be had in the TT030 market. If you can find a way to adapt the CT60/CT63 for the TT030, you have potentially sixty known users that will buy the new developments as well.

On a personal note, in your face Rodolphe and your rude attitude a year ago about there only being 30 TT users that cared. That statement no longer holds water.

Be well all,

Doc Clu

My Mac boots in 0.000 seconds. Well of course it doesn't, but the fact
is - that it seldom gets rebooted. It stays on 24/7, eats only 20W of
power when idle (30W at full tilt), and never crashes.

My other half's is a PII-400 dell laptop running XP SP1 (before the
nightmare of SP2), and that's also plenty quick enough for daily email/
internet/word/excel for the wife.

Vista - Just Say No.

Well the only way to find out is to try it. I personally wouldn't
though, unless I had a backup, and a desire to format my hard disk
afterwards.

I'm sure someone else will enlighten us soon enough ;-)

BTW, what was wrong with the old crack? I used it for a long time with
my CAF because I wanted to use the cartridge port for something else,
and I don't recall having any problems.

Herr Seimet, you should read my posts little more carefully. I never said that I will not make it XHDI compatible. You know well that I said that I will not make HDDRIVER plugin.

And on what base you say that I have problems with implementing anything?

Hello,

On my page, the last version of M_Player with dialogs in windows. While the video is being played, the AES is blocked, but when loading large sounds, searching for files or creating an animation, the GEM is now available for other applications! (M_Player in PRG or ACC).
I also uploaded the source code.

http://perso.orange.fr/gtello/ download section!

Guillaume.

ppera@ppest.org wrote:

> Herr Seimet, you should read my posts little more carefully. I never said that I will not make it XHDI compatible.   You know well that I said that I will not make HDDRIVER plugin.

There is no such thing like a HDDRIVER plugin. SCSIDRV is a modular approach, and if somebody provides such a module drivers like CBHD and HDDRIVER will automatically use it. The Milan PCI SCSI driver is a good example for that. There is nothing that is based on or specific to HDDRIVER.
Re re-inventing the wheel: Those who provide a SCSIDRV plugin do not have to provide anything else: No XHDI, no partitioning software etc. So if you write XHDI code of your own, partitioning code of your own etc. you are going to write much more code than actually needed and the more code you write, the more bugs it will have, the more time it will take you, and the more compatibility problems with other drivers will arise.
That's why I said that your approach is outdated, more outdated than the approach used by the old driver you mentioned.

> And on what base you say that I have problems with implementing anything?

Well, just do it.

Let's put the driver-specific issues besides for a moment and let's look at an example from the past, which in my opinion is a good example of problems caused by ignoring standards and investing too much time in coding things that had better been spent on other things.
Do you know the TEMPUS editor? It was a well-known editor in the early days of the Atari, and it was blazingly fast. So fast that the author provided settings so that you could slow down the speed with which TEMPUS was scrolling, because TEMPUS was scrolling so fast you could not read any text while scrolling. (Being this fast is useless.)
As long as there were only SM124 monitors (resolution ST high) and old versions of TOS everything was fine with TEMPUS. But this changed with each new Atari models and new version of TOS. With any change TEMPUS was causing more troubles. The author was so keen in writing a software as fast as possible and in going his own way that he disregarded many APIs.
Other editors were closer to the APIs and did not have these problems, and these editors are the ones mostly used today. They were slower than TEMPUS when scrolling, but still fast enough.
In the end the users choosing the slightly slower editors were the winners: They can still use their editors today, even though they are not actively maintained anymore. The users of TEMPUS can be considered the losers: Usability and compatibility was sacrificed for a gain of speed useless in practice. I doubt that these users were satisfied with their choice.

All in all, writing software not based on existing standards, as far as they are available, is usually not a good idea. It is more time-consuming, has a big potential for incompatibilities, and one has to write more code. It has been shown that the number of bugs in a software is roughly proportional to the number of lines of code.

Ever heard of Contiki?  Or The Wave?  We have ethernet carts, IDE carts, =
just about everything!

Uwe Seimet wrote:

"....if you write XHDI code of your own, partitioning code of your
own etc.
you are going to write much more code than actually needed and the
more
code you write, the more bugs it will have, the more time it will take
you, and the more compatibility problems with other drivers will
arise.
That's why I said that your approach is outdated, more outdated than
the

approach used by the old driver you mentioned."

As I said IF is intended for ST(e) machines. They are pretty old now.
Even last TOS for them is 16 years old. Forcing modern programming systems as modular programming, Object oriented programming etc is not suitable for those slow machines with not much RAM. Most efficient is still straight programming, in assembler. With lot of branches, jumps.Must it have many bug? No.
Bug amount depends mostly from careful testing, not how program is written.
I prefer 'outdated programming' for outdated machines.
There are some other things: driver must be in ROM of cartridge.
Combining it with other software, intended for RAM will just cause lot of complications, more RAM usage.
And code is 90% finished, why should I now change it?
Partitioning: I asked on some forums about partitioning SW for ST machines, and result is that we have very little choice.
There is some unfinished open-source project, pretty massive. I don't think that partitioning must be so complicated. Even Microsoft did it simpIe. I don't know about what 'SCSIDRV partitioner' you talk.
Why not to make something new?

Uwe Seimet wrote:
" Let's put the driver-specific issues besides for a moment and let's look
at an example from the past, which in my opinion is a good example of problems caused by ignoring standards and investing too much time in coding things that had better been spent on other things.
Do you know the TEMPUS editor? It was a well-known editor in the early days of the Atari, and it was blazingly fast. So fast that the author provided settings so that you could slow down the speed with which TEMPUS was scrolling, because TEMPUS was scrolling so fast you could not
read any text while scrolling. (Being this fast is useless.)
As long as there were only SM124 monitors (resolution ST high) and old versions of TOS everything was fine with TEMPUS. But this changed with each new Atari models and new version of TOS. With any change TEMPUS was
causing more troubles. The author was so keen in writing a software as fast as possible and in going his own way that he disregarded many APIs.
Other editors were closer to the APIs and did not have these problems, and these editors are the ones mostly used today. They were slower than
TEMPUS when scrolling, but still fast enough.
In the end the users choosing the slightly slower editors were the winners: They can still use their editors today, even though they are not actively maintained anymore. The users of TEMPUS can be considered the losers: Usability and compatibility was sacrificed for a gain of speed useless in practice. I doubt that these users were satisfied with
their choice.

All in all, writing software not based on existing standards, as far
as
they are available, is usually not a good idea. It is more
time-consuming, has a big potential for incompatibilities, and one has
to write more code. It has been shown that the number of bugs in a
software is roughly proportional to the number of lines of code."

Your whole example with Tempus has 2 big problems:

1: Atari ST is discontinued machine. No changes will happen in TOS and
hardware.
So, no danger that something will become incompatible

2. I do not plan any 'dirty tricks' in driver. All is with regular
BIOS and GEMDOS system calls and relative simple MC68000 assembler
code.

Smaller problem is constant assuming that program will be buggy.

I have time for such programming. Now have. Maybe after couple months,
years it will be not so. So, why not programming? Maybe it is more fun
for me than playing Dungeon Master for 199-th time...

  One thing more:

"Using SCSIDRV does have its shortcomings. For example, if the SCSIDRV
driver does not support a particular device type, you will not be able
to use it." - it is quote from Roger Burrows description.

  It stays of course for device types - as SCSI, ATA, ATAPI...
However, because IDE port is tricky addressed by writing on cartridge
port it is very likely that whole idea about SCSIDRV will simple not
work...
  Other thing what I don't like is that it is in C. I don't want to
mix assembler with C.
Case closed from my side.

Did you mean boards to build, or completed boards?

I had a couple of boards etched ages ago, but I have not tested them yet so I can't be sure the layout is right. It uses SIL resistors that I had to order. I am supposed to be picking theses up on Monday so perhaps by the end of the week I will know if they are OK.

If they are OK I could possibly get you a couple etched, depending on how busy my etcher is. Would bare, undrilled, boards be OK. Or I could send you the layouts and you could etch your own.If you want ready built I may even be able to make those, but my soldering is not great. How keen are you to get them?

However if you can etch your own arn't they layouts on Lyndons site?

> Unfortunately Lyndon doesn't produce them any longer.
>

A great pity. Didn't the chap in Canada who bought Lyndons stock produce any more? I think he was FujiMan on e-bay...

Nobody was talking about object oriented programming, and object
oriented programming is no prerequisite for modular programming. There
is no problem in implementing the standards already mentioned using
assembler programming. Any child can do it, even I could :-)

Sure, and that's why one writes a plugin for the specific devices. This plugin consists of the same code you have to write for any new hardware, but since nothing more than the hardware-specific code is needed (i.e. no code for partitioning and other administrative stuff) the SCSIDRV approach is the one with minimal effort.

Of course it will work. The same approach works for all current

operating systems and for TOS as well.
Can you please elaborate on the part of the SCSIDRV specification you
think will cause problems?

> Other thing what I don't like is that it is in C. I don't want to
> mix assembler with C.

Why mix assembler with C? You can easily implement SCSIDRV support in
assembler. I also did so.

OK.
Thanx for advices.
This leads nowhere, and we started to repeat things.

For me is simpler to do it on my way. Users will have no benefit from SCSIDRV, except if we count as benefit longer code and less RAM and slower work. Partitioning in CBSD is rather primitive - almost 200KB, for something what can be done in less than 10KB. Just waste of space because of C and unnecessary components as driver install...

I'm done here...

Hi,
This site has a converter. That will allow extractions, but a lot of MSA DISKS have encryption (i.e) ICE, and will not run with out being decrypted.
Anyway the site is :
http://msaconverter.free.fr/index-uk.html

I would like to find a Windows based program that will decrypt ICE encryption..

RoyE

The thing I find funny, is Jay Miner, the guy who invented the AMIGA, is the same Jay Miner that invented the Atari 400/800 line.

Jack Tramiel and his people who was responsible for the C-64 are the same ones who created the Atari ST. If you were a *real* fan of the earlier machine, you should have switched companies, and stayed with the people who designed your beloved machine. What would have been funny, is if Commodore did not sneak in at the 11th hour, and steal Amiga from under Atari's nose, and it would have been the Atari Amiga and the Commodore ST.

There is no choice as long as you spread wrong information.

> For me is simpler to do it on my way. Users will have no benefit from
> SCSIDRV, except if we count as benefit longer code and less RAM and

SCSIDRV plugins are only a small subset of a complete driver, so they
are natrually much smaller. It's a pity that you do not even try to
understand the concept.

Yet another 'misinformation' :

I checked CBHD, ver. 5.02 with 40GB Maxtor, 128MB Transcend IDE-Flash
and one CF card.
It recognised none of them. (While all work fine with some other
drivers - Not 100% with HDDRIVER, which sees one of the partitions,
but opens not files (no, it is not FAT32, just simple BGM
partition)).

And this is really my last word here:
This thread was just a huge waste of time. I did not get anything
really helpful.
Just a theory. Facts show different things. Amen.

There must be something wrong with your partitioning software :-)

> Just a theory. Facts show different things. Amen.

For 20 years nobody has noticed that the current driver concepts only
work in theory, not in practice. It's amazing how many users are having
hallucinations. Thank you for trying to cure us :).

It did not recognise drives. Has nothing with how is partitioned.
Btw. it is not partitioned with my 'non-existing yet' program.
1 drive is partitioned on PC, 1 is partitoned with AHDI and one with
HDDRIVER.
And I don't talk about concept, but CBHD itself.

And I know what will be your reply on this....

Hello,

IIRC, CBHD doesn't install any driver on to the disc. You have to
manually copy (I don't remember what) on the partition before you
can boot from it.
For PC partitioned discs, it's another thing. I remember I had
problems with earlier versions of HDDriver, but Uwe must have
fixed this now, as all works fine for me at least since 8.17 ;-)

Regards,

J.-Luc

Hello,

As it isn't into Erik's habits not to answear mails, I hope
he isn't into trouble :-/
Anyone knows ?

Regards,

Jean-Luc

Hi All,

I got my brand new PlayStation 3 yesterday. I use it for the moment as a media centre, because it requires a HD display to install Linux (YDL 5.0 <http://www.terrasoftsolutions.com/>) and that my 20" 16/10 DELL screen has no HDCP decoding chip to handle High Definition. I'll probably have to get a VGA-Box to connect it, but all this is so fresh !

Looking at this for Linux :

<http://www.terrasoftsolutions.com/support/installation/ydl5.0_ps3_guide.=
pdf>

I was wondering about great opportunity to port ARAnyM's VM on PS3.

Somebody of us is interested in that challenge ? That really looks promising to me ... My own conviction !

Feel free to comment :) The French community is not enthusiastic :(

Best regards,

Hi,

Can anyone tell me how I can get a Iomega SCSI 100mb ZIP drive working
with my Falcon & HdDriver v8.18? The Falcon is not running any
replacent OS or desktops.

The falcon has four partitions on the HD C, D, E & F. I've run
HDDRUTIL.APP
from the C drive and 'Intstall HDDRIVER' to the root of the E drive.
HDDRIVER.PRG is
in the AUTO folder on E and I've then rebooted to E.

How do I add an icon/shorcut to this device onto the Desktop?

From within HDDRUTIL I get the following:

```
HDDRUTIL 8.18 Device Check

Operating System: TOS 4.01

Bus 2: Atari IDE
  00.00: TOSHIBA MK1724FCV       R0.1  Direct Access
Bus 1: SCSI
  06.00: IOMEGA  ZIP 100         E.08  Direct Access
  07.00: ATARI   FALCON HDDRIVER 0818  Processor
```

The ZIP/JAZ drive menu just shows 'Atari IDE 00.00: Toshiba MK1724FCV.

Appreciate I'm probably missing the obvious here :-)

Once HDDRIVER has recongnised the ZIP drive do I just add an icon onto
the Falcon's desktop.

Thanks in advance

Dave

Well, I think we were more objecting on the price/power ratio of this machine; specially when the idea is to run a virtual machine.

If an Atari emulator was spending it's time doing floating point operations, no doubt that the PS3 would be quite an efficient machine for that. But for running an emulation core, I fear that it will be less efficient than any standard desktop pc processor.

Will see :)

I promised a bottle of champagne to Fran�ois if he managed to run Aranym on a PS3 showing benchmarks which indicate numbers superiors of what we would got on a similarly priced PC at the time of demonstration (similarly priced meaning "only the desktop unit, without counting the price of screen, keyboard, mouse, loudspeakers, etc... because they are not comming with the PS3 either).

So well, this can be interesting to see :)

    Dbug

There are some translated CBHD files in the Misc section of my we site, if anyone is interested. I don't know if they give a blow-by-blow account of installing it though!

FWIW, the file DRIVER.SYS or similar name is written to the C: drive, and the necessary code to run that driver is written to the drive's boot sector.

Yes, just like you would with any other drive. In order for HDDRIVER (and not just HDDRUTIL) to find the drive ensure that HDDRIVER is configured to check the ZIP's SCSI ID. The manual provides details on how to configure which drive IDs should be checked.

Hi all,

Does anyone know if an hp business inkjet 1200d printer will work on an
Atari ? I need to replace the printer on my Hades, which I use in single
TOS to print from Cubase Score, and also in MintNet to print from Papyrus.

The hp business inkjet 1200d has a parallel port as well as USB, but I
don't know if the NVDI HP Deskjet 1200 colour driver will work with it
(I use NVDI 5.01).

Alternatively - any other ideas for a good replacement printer with a
parallel port - preferably one with a USB port as well ?

Thanks in advance

Paul

I take it that you want to run games from a hard disc, right ? I'd love that
too (The MSA dearchiver with decryption, that is). I found "file-based"
cracked games on D-Bug's web site (which seems to be regularly updated).

The Automation disks are in .ST format. Best I can do with the utility
you linked to is to delete files from the image. That leaves their
entries in the menu screen.

Better than nothing, but there must be a utility out there, somewhere?

The old 1200 we have at office is only capable of 300 dpi, and the data
I found about the 1200d say it can 4800 dpi.
So, even if you can use it with the old 1200 drivers, I think you won't
be able to benefit its possibilities.

Right, I've enabled 1.7 in the 'Devices & Partitions' box, the device check confirms that the ZIP is on bus 1 07.00 (is that the LUN?).

Now if I go into the ZIP/JAZ drives menu all I can see si the Toshiba IDE hard drive as before. Adding further desktop icons still does not allow access to the ZIP.

Just be be sure I'm doign everyhting there are a few points in the printed manual I could do with clarification on...

1.1.1 - There should be no HDDRIVER.PRG in the auto folder?

1.2 - This states that the program is installed to the root (boot) drive as hddriver.sys but then says if run from a floppy it needs to be .prg.   Are .sys and .prg mutually exclusive?

Right, just had another scan through the manual and I think I've done everything correctly but nothing but nothing will allow this ZIP to be picked up.

Thanks,
Dave

I love the newsgroups,

Images, video, mp3 music, the real news from around the world... it's all inside waiting for you.
With some of the fastest connections around it's no wonder people love it and keep coming back.
Great prices and support await you as you travel into the beautiful world of premium nntp access.
You can find almost anything you are looking for.
They give you access to some of the best groups others may not carry.
They offer some of the best premium newsgroup access anywhere.
One thing I love about them, they don't keep log files of the news I read or files I download.
Take a look, I know you'll love it as much as I do.
Take a look at all the great features below and imagine! You'll LOVE it.

Blazing fast downloads
800 GIGS of new multimedia content each day
2,000,000 new posts each day
Very long retention
Keyword searchable
Posting allowed!
Convenient thumbnail indexes

Check out http://www.newsdude.net and you will love them too.

High
I have SCSI ZIP100 drive on a TT

blah@blah.com wrote:
> Right, I've enabled 1.7 in the 'Devices & Partitions' box, the device
> check confirms that the ZIP is on bus 1 07.00 (is that the LUN?).

In your previous post it was bus 1 unit 6 :-)

Use HDRUTIL and perform a autoconfigure (rightmost menu title)

reset

Which OS do you use?
if TOS, do Options->install devices

One of the icons should be your ZIP, probably the highest letter.

If you dont use TOS, I dont know, unless you use Mint/XaAES/Teradesk.

Factory formatted ZIP disc are not recognized by single TOS.
For those you must use MiNT.

However, you can repartition ZIP media for use with
single TOS. HDRUTIL is your friend.

That's not an original Atari keyboard. Well, it is but the buttons are not. You could buy "key caps" from a company (I forget which) that replaced the original spongy caps with clicky ones. Some people prefered clicky keys to the spongy ones.

Joshua.

> "normal" pc style discdrive?

last week I just revived my own ST after years in the attic (very clean but long storage)
the disk was not good at the beginning , could not read anything properly, seemed to run slower

then , after a few days , and several tries with non important disks , it just recovered then worked fine again ;-)

I also had it extended from 520 to 1040 but it seems that the memory extension is gone , because it works like a 520 now ...

may have a look inside ...

I liked very much the "spongy" touch of the keyboard, I was already typing very fast and lightly . It was a bit like what we have know on lots of PC keyboard or laptops ..

I remember a lot of people disliked it however ...
I hated the big extrmely cliky keyboard we often had on workstation at the university , but so many people coming to these station were afraid or reluctant to use these machine , so they needed a strong feeling upon any pounded key

some even added "bips" or "klungs" to these big KLIKeyboards , to be really sure they depressed the keys , beeeuuaaark :')

well , sometimes now, I love voice input ;-)

> ST has RGB as it is usual by computers. But I saw some DVD players
> which have RGB outputs too - probably not case in US.
>

yes, in europe, a lot of devices like dvd players or satelite receivers have RGB outputs through scarts and all TV accept it,just like a ST RGB output

some devices have RCA plugs in addition for RGB

and some low cost equipment only have RGB output , and when there is choice through a setting menu , RGB is often the default choice

(the settings menu amaze me because it s not straigthforward to reach when you are using the remote controler ... and you probably would want to change that when you can't see a picture ;-))

On the subject of Compact Flash "hard drives"....
I've heard that there's a limitation to how many times data can be written to these cards. In Atari ST terms that limitation is probably not even worth mentioning, but what worries me more is if sections of the CF card start failing and my data all of a sudden disappears!

Is this something I should be worried about, or are there safeguards against this sort of thing happening built into the CF card itself or HD-driver?

Hallvard

Hi,

I am looking for a couple of Eiffel boards (with or without display) but with the modern layout with joystick boards.

Unfortunately Lyndon doesn't produce them any longer.

Any others out there who can help?

Thanks in advance,

Frank

I heard that the card itself can detect those "bad sectors" and that data is written elsewhere safely. Just reducing the size, but not losing datas. Can anyone confirm?

Else, a flash ram can support about 100.000 clear/write cycles.

Guillaume.

Nobody showed up. so the next local meeting is going be set in

September(time and date TBD)
Until then:all the topics that was to be discussed at the march meeting(see below) will discussed
at the Atari Video Club Saturday chats at the telenet chat room(telnet://www.atarinews.org)
from 2pm to 7pm CT

> Atari Video Club will be holding thier meeting at the Westchester
> Public Library in Westchester,IL on 3-18-07 at 2:30pm.
> the meeting will be two hours long.
> the first hour of the meeting will be a meet and greet,where
> I will introduce myself and get to know you.
> we will also be discussing the following:
>
> Club matters: future meeting dates, newsletter ideas,meeting ideas
>
> ideas for future club outings: amusement park,flea markets,amusement
> places
>
> trade show or swap meet ideas VGS or smaller show
>
> The second half of the meeting will be used for trading and possible
> demoing some items.
> (please Do not bring stuff for selling,since it's at a library and I
> told them no money will be collected I don't to get in trouble)
> on the subject of bring stuff to demo please let me know first this
> way I can set you up(space is limited)
> We should be out of there by 4:30pm
> the location of the library is:
> 10700 Canterbury Street, Westchester, Illinois 60154
>
> I should be there around 2pm to set up and unlike the first time I did
> this
> I will greet you at the door of the library and direct you.
> (incase I get off work at 1:45pm I'll bether around 2:15pm)
> here is the url to library :http://www.westchesterpl.org/index.htm

I'm not saying that you are vasting your time, but when the ACSI-IDE interface will be finally finished (http://stlabs.free.fr/stdmaplus.html), it will be more flexible:
- ACSI compatible in every way
- Plug and play also
- I don't know much about the speed of it, but I think it is not a real issue with an ST (they are slow)
- Compatible with every model equipped with the ACSI port
- You can use your favorite HDD driver and other AHDI compatible softwares

(- not to mention the Ethernet interface)

I hope it will be finished soon.

By the way I found someone here in Hungary, who developed his own rom-port IDE interface back in the old days (files are dated 1989-1994). I have the schematics and all the sources of the driver and partitioner software, if you are interested I can send it to you. I'm planning to build one, just for curiosity.

That 'will be finished' is one of reasons why I did it. Several
projects are anounced for years. And nothing available at moment.
ACSI compability means nothing for me. Speed is best of all from ST
interfaces - ACSI port is actually slower than Cartridge Port. Atari
can be pretty fast - almost as new PC in PIO mode (1.7 MB/sec by read
and over 2MB/sec by write). I Agree that no real need for so big
speeds, but who knows..
Compability with every model equipped with ACSI is not true - there
is a many trouble with diferent ACSI adapters.
HDDriver is not so good as some think - and costs lot of money. For
same money you get IF and SW from me.
And when it works well, you don't need 'AHDI compatible software' -
you need to use it for what is intended - load and save files.

I'm in Hungary too :-) . And there is some Polish 'Paskud' IF too -
discontinued.

There is no todo item in the hardware section, so I'm hoping the best.
It is hard to see for me, that there are so many parallel developement
for the same problem. IDE interface is one of them. I think we
(actually you, since I can't design hardware) should organize our
resources more. We are not too many compared to the Amiga guys.

> ACSI compability means nothing for me. Speed is best of all from ST

I installed the ATSpeed emulator with Paskud's interface hoping to use
my hard drive. But it was not compatible. You could run MiNT with your
TT if your IDE interface would AHDI/ACSI compatible without further
software devlopment.

I don't know much about it. I didn't hear that there are problems with
the Link97 adapters for example.

I know it. But must have in mind that Paskud was made 15 years ago,
with own drivers. Internet was not accesible in most of Europe. So,
Paskud made driver best as he could.
Today making AHDI compatible driver is not big deal. ACSI is obsolete,
slow...
Even Falcon dropped out support for ACSI in latest TOS for him.

> I don't know much about it. I didn't hear that there are problems with
> the Link97 adapters for example.

I just said that we have some problems. Not all people has Link97.

Every chain is slow as slowest part. Today no problem to make
extremely fast ACSI IF. But you can not go over limits of DMA chip in
ST.

> I didn't speak abut HDDriver but HDD driver.

I really don't know what you mean under 'HDD driver' .

I'm not talking about only Paskud's interface. There is yours, there
is STLabs', there is SatanDISK.
There are the ethernet interfaces (STLabs', NetUSBee). And the most
sad thing is that we haven't got the informations (schematics etc) to
build old hardware though they are not produced/supported. How great
it would be, that someone could build Link97 interfaces, accelerators
like Pak, Cattamaran, VME graphics cards. Are these vaished for ever?

Link97 is just an example: a good ACSI interface can be built that is
comaptible with all models.

Any hard disk driver, like Atari's AHDI or HUSHI

Joe Iron =EDrta:

>
> I'm not talking about only Paskud's interface. There is yours, there
> is STLabs', there is SatanDISK.

I don't know what you mean. My internal IDE IF is 100% AHDI compatible. And HDD driver compatible,
It is 9 years on WEB, paid by my own money. And there is some software for it, free.
Now I offer solution for non-electronic people. But main thing is Flash memory - no need for external power supply like by ACSI.

> There are the ethernet interfaces (STLabs', NetUSBee). And the most
> sad thing is that we haven't got the informations (schematics etc) to

> like Pak, Cattamaran, VME graphics cards. Are these vaished for ever?

This is what is. And if you think that I plan to make some money with cartridge IF, you are wrong. I just want to cover my costs and time for writing software.
Before 1 month I was about to make ACSI IF for CF cards. I made rough concept of IF (very different than Satandisk and some others, and would be much faster). But situation here in Hungary with components is so bad that I need to wait 1-2 months for some components. So, I went to another solution, what I thinked out last year. It has some benefits - for instance 16 bit data bus, while ACSI is 8-bit. And that IF would cost more than Cartridge one - more parts required.

Actually, I'm sure that reason for troubles with ACSI IF is big difference in SCSI and IDE protocol.
Other reason is that people who develops it is not so good in that.
Big firms lost interest because of small market, and we are now on amateurs like me.

Beside it, most of projects is not for home-makers. If someone was unable to make internal IDE IF (what is simplest possible IF at all) he will not make cartridge or ACSI port IF. Not to mention NETUSBee.

> Any hard disk driver, like Atari's AHDI or HUSHI
>

It is that: you can give here only 3 examples. In reality: AHDI is slow. HUSHI worked not with IDE interface. So, we are on HDDRIVER only! And only AHDI is free. It is not good.... over 20 year old machine so bad supported by hard disk drivers....

Can you tell us more about these troubles? I wonder what kind of troubles I have missed and have never been reported for the last 15 years or so.
Fact is that ACSI has worked quite well for ST computers for a long time. One of the reasons is that with Link adapters even modern SCSI drives can be used.

You should check the facts more carefully: HuSHI supports IDE drives,
and there is at least one other driver, namely CBHD, which is even free.

Please, don't misunderstood me. There is no problem with your
interface. I just wanted to know why you decided to design a rom port
interface and told you my opinion on that. I also know that the money
is not your motivation.
Please forgive me if you feel I offended you.
If you leave next to Budapest or Szeged I would really like to meet
you and share our opinions.

  Hushi worked not for me. However their CD-Tool worked with same IDE
IF.... Funny.
I can not know every driver. There is certainly couple more, unknown
foor masses.

 And for troubles about ACSI interfaces - visit some forums.

For SUDOKU fans who have installed a SpareMiNT system on their Atari:
There is another Sudoku game in the sparemint repository. It does not have
a GEM interface, but uses a curses interface and is quite playable in a
Toswin2 window or even without GEM in the easymint login screen.

I just didn't succeed getting the cursor keys to work to move the cursor.
Instead you need to use the h,j,k,l keys. If someone can make the cursor
keys work that would be nice.

No, tell us. I have been reading all the relevant Atari forums for a
long time. If there would have been any particular issues I would know them.

You are quite often claiming things that to not fit in with the facts. Why?

I think that such tone leads nowhere.
If I don't know about some driver it is because it is discontinued,
has no WEBsite and similar. I did lot of search with Google and on
forums.
Actually, saying that something works is a confusion in this case.
Why - because you talk in past. Maybe those drivers worked in 1994
wirh some IDE disks of 100-200 MB, but it worked not with 40GB, 4
years old drive...

Simple said, most of drivers is obsolete. And I will not go now on
flee-market to buy some 13 year old 100MB drive to check will HUSHI
recognise it.
So, please talk considering that we are in 2007.

  I don't see any offense in your posts. Problems are as usual:
confusion about technical things.
I'm in Szeged. Drop me mail (on site is link).

  I did put together short article about Atari STs and hard disks -
may be useful for some people...

http://www.ppest.org/atari/astahds.html

This is why we have HDdriver :-)
Why reinvent the wheel?

I don't understand why you're being so hostile towards Uwe and
HDdriver. After all, how many active supporters are there left in the
Atari community. If you can come up with something better which in
addition is free be my guest.
I'd like to see you put in that amount of time and do it all for free.

Hallvard

You misanderstand what is talken here. I never said that hard disk driver must be free. No problemos that Uwe sells his program. I just say that we have not much choice.

Why think that I'm 'hostile'? Actually, I make here 'free' advertisement for HDDRIVER, by saying that other drivers are obsolete.

Uwe should just little lower his tone, and not talk as he is only who knows things and everything (see his comments about reading CDs, max BigDOS partition sizes).

I made at least 5 free programs for Atari ST users in past 10 years. Some of them are quite complex - as Floppy Imager and Drive Imager. But most of people just asks more and more. You complain that no PCB design on sites - then do it, publish it! - Don't take it 'hostile' .
Just open your eyes, see what is done...
So much about free things here from me...

PP

I'm not in those meeting things - here in East Europe no much such

event. better said no at all.
Actually, I don't see why is it in Atari ST section. What ST related
happens in Atari Video Club?

  Reply #2:

I clicked on that link: no word about IDE support on that page.
There is 2 dead link and one with directory with about 30 diskutils
for download...

So, I'm guilty because they mention not IDE support?
Should I expect that program old 10 or more years will work well with
new CF cards?
I can do better with my time...

Come on... It is just another example of discontinued software,
discontinued WEBsite.
You need some better example - this just proved what I said.

Hello,

In fact, you both are right, because :
- yes, both CHBD and HuSHI support IDE drives (I used both of them for
  some time, but due to their limitation, I had to change for your
  HDDriver), but
- they don't work with drives bigger than 8 GB (or so, I don't remember
  exactly, but what I'm sure about, is that with both of them, I could
  not use my 20 GB HD in totality).

So, nowadays, the only driver that ensures compatibility with all
devices, that is safe and reliable, and that is still supported, is
your own software - do I need to mention you ought to be proud of this ?

Regards,

J.-Luc

Well i know some of you have differing opinions on what the atari community 'needs' but we must remember that without these enthusiastic amateurs/hobbyists there would be no or a very little atari scene. I have been away from the scene for a many number of years and have recently had my interest rekindled by all the new hardware that people are trying to produce. These people are trying to make our machines connectable to technology that wasn't necessary available to the masses back in the 80's and early 90's - USB, Ethernet (internet), Flash Card reader etc.

If someone wants to develop some hardware for us and spend their spare time doing it, we should give them all the encouragement they need and not 'pick holes' in there methods or give them a 'why are you making this bob done that last week'. It's their choice, variety is nice. I have purchased a SatanDisk and will probably purchase the STlabs device when it's available, similar devices, but if i find myself using one more than the other i will put the other on ebay for someone else to use, as most of these creations are only produced for one batch the more in circulation the better.

So to all who keep on developing for the atari please keep it up and you have all our thanks that you still find time to do it aswell :)

Do you reckon anyone would ever be able to make a wireless adapter for
the 8bit atari to be able to access files wirelessly from the PC?

In the meantime I use an old Fujitsu tablet PC I got cheap to connect
up the atari in the loungeroom, but a wireless setup would be great.

> years old drive...

I think you should publish your final hardware and software and then we will see if what you deliver is better than what the other drives I referred to delivered at their time. They were (and still are) used by numerous users and in general all the old drivers are known to work reliably. And they support standardized interfaces like XHDI and/or SCSIDRV, which have gained a lot of importance and are required by various tools and file system drivers.

> So, please talk considering that we are in 2007.

That's a funny remark, considering that by refusing to support standardized interfaces like the SCSI driver or XHDI you are writing software which is not even on the technological level of 2000. Your approach is outdated from todays point of view, and if, as you say, any child can write a driver, I wonder why you have problems with implementing modern specifications.

By the way, about once a year I get an email from somebody telling me he is almost finished with his adapter for connecting IDE or SCSI drives to the Atari. Their approch is always the same: No, XHDI and SCSIDRV are not needed, their own proprietary solution, which is not compatible on the software level to anything is much better. None of these solutions has been finished, and I do not find this surprising.
And this is why rather old solutions like the Link96/97 are still the solutions people are asking about: They exist and they work.

The point I am trying to make is that one should not complain about the software of others by making wrong claims about this software. Even though some of the drivers mentioned do not support modern hardware they are modern from a conceptional point of view, supporting layers like XHDI and SCSIDRV, which are used by various of todays applications.
In order to prove that certain software is outdated one has to provide better software, not just talk about it.

  This discussion just goes in complete unnecessary talks.
I did not started it to get some comments about what we have on market
```

or what we have in promises, announces.
Did not start to read some preaching about XHDI and SCSI standards.
All it is available on WEB, and is not so hard to implement.

It looks that people has prejudices that so called 'home-programmer' can not write XHDI or/and whatever other standard driver.
Actually, I made preliminary tests yesterday, and interface + driver works well with Mint.
So, please stop with negative comments. And BS like: 'we have HDDRIVER (or ACSI port), why you want to reinvent hot water?'

If you don't have anything constructive then better don't post...

Wow,

I'm really glad for me he is in Italy and not in the States. But watch out European Atari users! I wonder if the TSA will confiscate computer mice and Commodore disk drives as potential weapons at US customs?

-Jason

Hi,

I've been going through my diskettes found this disk. I cannot read
it, so either I have a blank disk or corrupt one. If anyone has this
please email me if you can send an image of it. It is version 1.1.

This was originally purchased from SFT, but the disk says FaST Club
from Nottingham UK.

Thanks
Rory McMahon

JamesD =EDrta:

>
> Looks impressive any idea on when it might be available to the paying
> public and a very rough price?

  Currently I look for PCB manufacturer. There is yet lot of work to
do with drivers and partitioning software.
  May be available in some 3 months from now. Price would be about 40
Euro - that includes interface with 2 Eproms (with hard disk drivers
and probably couple short utils, just to fill space) + Partitioning SW
(it is not wise to put it in Eproms, even if would fit there).
 And I need to know what connector people prefer - IDE or Compact
Flash? I will put some formular on site about it..
  Personally I recommend CF...

Is there a way to plug more than one thing into the cartridge port? I
have a Cubase Audio dongle on my Falcon that's inside my recasing job,
so I'm not able to use any other cartridge port devices (like NetUSBee,
```

etc.) in any practical way. Something that allows more than one item to
be plugged in would be very helpful, if it exists.

Yes, for dongle based programs such as Cubase as you mention (and Notator SL in my case) there are cartridge expansion devices available (or were available I should say), but they only allow you to select one cartridge device at a time.
These devices were made for situations where you have several dongle based programs and you don't want to switch off the computer in order to change dongles, then power up again.

> I have a Cubase Audio dongle on my Falcon that's inside my recasing job,

The device in question really needs a "through" connector so that another cartridge device can be plugged into it and be accessed at any time.
This is what my C-Lab/Emagic hardware add-on devices have.

That's true.
I'm looking for them as well, but haven't had any success so far.
I believe Foxconn made them back in the days. I've found their website
(http://www.foxconn.com/), but unfortunately no such connector is
found there. I've tried contacting them, but haven't received any
replies. Maybe you should try as well.

Isn't necessary! STip v1.0 starts from the AUTO folder and you must
start MacSTip v0.9d manually at the Mac side - after that ICONNECT

can now connect via the Mac OS TCP/IP network... that's all!

Hello,

An update to the SUDOKU solver: it can save the puzzle as a GEM IMG file to be printed (Button SAVE, then GEM IMG).

http://perso.orange.fr/gtello/downld_e.htm#prog

With sources (it's open...). The IMG image is 1200x1320 mono. So, if you print it in 4"wide, it's close to 300 DPI.

Enjoy,

Guillaume.

Great! I never go online and use Cubase at the same time, so switching between an Ethernet device and Cubase dongle shouldn't be an issue. Do you have the name of this cartridge expansion device so I could track one down? Or, does anyone out there have one they want to get rid of?

Thanks for the info!

I don't have one for sale or know anyone else who has, but who knows
what fellow Atari users have in their closets (or ex-Atari users).
Since I use Notator I've bought C-Lab/Emagic's "Combiner":
http://www.notator.org/html/notator_faq.html#combiner
```

Then there's the Cartmaster from Wizztronics:
http://www.notator.org/html/notator_faq.html#cartmaster
(According to their website they seem to have a "low cost" (ehm.... at
US$ 80 I'm not sure if I agree) version of the above called the
Cartmaster lite, though I'm not sure if it has a "pass-through"
connector which you really should have for your Networking interface:
http://www.wizztronics.com/cartmast.htm)

>From Steinberg there's the Midex and Midex+ as far as I know. Since
you use Cubase this might be your best bet for compatibility as if
Cubase is something similar to Notator it automatically changes to the
correct dongle when within the SoftLink environment. It's M.ROS for
Cubase isn't it?
Anyway, you're in luck because there's a little over a day left for an
auctioned Midex+ at eBay Germany: http://cgi.ebay.de/ws/eBayISAPI.dll?
ViewItem&item=230102638286

If you don't get your hands on that one you could always set up an
automated search at eBay and get alerted whenever something like that
comes up. Also try to find ex-Atari users and places where people
would dump anything "worthless" (to them) meaning you might get a
bargain on stuff like this which within the Atari community is
probably worth a lot for those looking for them.

There are probably other cartridge devices around, but that's all I
can think of at the moment.

Upon further inspection I see that there are several Midex devices
available at the moment. So far only at eBay Germany:
http://search.ebay.de/midex_W0QQfkrZ1QQfromZR8

I don't know where in the world you are, but you could always try to
contact the sellers and ask them if they're willing to send to your
area as in my experience they often are even if the auction page says
they only send it within their own country.

I'd go for one of the Steinberg devices if I were you, to ensure full
compatibility. It's been a while so I don't know the details, but I'm
pretty sure the Midex+ has some advantages over the Midex. Perhaps
someone else can fill you in on that.

Good luck!

  Actually, it is PAL in Mega ST.
 So, STE integrated it... But then must have chip select pin for clock
chip on that GSTMCU. Should check schematic of STe...

Why is GAL (or PAL with same function) ? It is address decoder and
little logic - for activating clock chip on certain address, and give
some required signals to CPU - as DTACK.

I was told they were two different animals, but I would imagine an adaptor would be the easier way to go, but then, fitting in the case (FMH's concern) and the software would still need to be written.

We are up to 40 people now. :) 10 more to go.

AVC is returning to The Midwest Gaming Classic on June 9th and 10th to host
The Atari Jaguar Festival (aka "Jagfest " to long time Atari followers) section.
AVC has been involved with Jagfest since 1997 when the first Jagfest was held
in Rosemont,IL and we enjoyed being part of the festivities in some way or
form at other shows.
At last years show AVC produced a special black t-shirt to commemorate
Jagfest 10th year anniversary. This year AVC continues the trend by producing
four new items to celebrate Jagfest 10th year and they are:
Limited Edition Jagfest tour Shirt(based on tour shirts that music bands
have. Front of the shirt has the Jagfest on tour Logo below that the words
in RED "1997 to 2007" and "US To OverSeas" Back of the shirt has
a smaller version of logo below that also in RED are that all known dates
and locations of Jagfest(US and overseas)) from 1997 to current)
Black Jagfest on tour cap
White Jagfest on tour cap
Jagfest on tour trucker cap
(all caps have the jagfest on tour logo below that are the words in RED:
"1997 to 2007")

The Tour shirt (and two of three caps) is scheduled to make it's first appearance at
the Jagfest section at Midwest gaming classic, where AVC will be selling a limted
supply of the Tour shirts and take orders for it after they sell out.
(we will be taking orders for the caps as well for any other Jagfest On tour items)
AVC also announces a Tour Shirt and a selected Jagfest on tour cap will be a prize
for this years Jagfest Tourney
All above mentioned items are currently on sale until August 1st then

thier prices will go up.
The Limted Edition Tour shirt will be removed from the shop after
Novemember 7th
(the caps will however remain in the shop) orders for the Jagfest on
Tour items mentioned above can also be done online at <a href="http://
www.cafepress.com/avcnews/1338959">Jagfest Section at AVC News stand
on Cafepress.com
For more information on Jagfest at Midwest Gaming Classic click <a
href="http://www.midwestgamingclassic.com/content.php?id=jfest">here</

This sounds like a route.tab problem. Please post your route.tab file
for help or read on
(From a post of some years ago):

Let's not forget what the route means:
This is from memory, but I believe I'm correct:

First set: What addresses may be reached
Second set: Masking (0 = strip, 255 = keep)
Third set: What port to use
Fourth set: What gateway computer (router) to find

Thus, 192.168.0.0 255.255.255.0 Ethernet 0.0.0.0
would mean to send any data intended for 192.168.0.xxx out the
Ethernet
port and to use any available computer as the gateway.
Then 0.0.0.0 0.0.0.0 EtherNet 192.168.0.1
would mean to send any other data out the Ethernet port to the
computer
192.168.0.1 (assuming that's your router). If you intend to send all
data out
your Ethernet port, I think that you just need the default line, which
would be:

```
0.0.0.0  0.0.0.0  Ethernet  0.0.0.0
```

although you might also try:

```
192.168.0.0  255.255.255.0  Ethernet 192.168.0.1
0.0.0.0  0.0.0.0  Ethernet  0.0.0.0
```

One important point -- there are no spaces in this file! What appear
to be spaces MUST be double [TAB]s.

Galen

No.  It's pin compatible (RS-422?), but there are no Appletalk
drivers.  The easiest (rather slow) way to transfer a few files is to
email them to yourself.  Send on the Mac.  Receive on the STe.

So far unknown. This list is to show that there are 50 interested purchases should the developer of the Falcon CT60 reconsider development of a TT version as well. He said he couldn't find 50 interested people for the TT, I disagree. We have 40 so far, and this list has not been going all that long or circulated to all regions it could.

Cost, if convinced, I would imagine would not be much more than the Falcon version. How much was the Falcon version? (Could one of you CT60 Falcon users answer this question?) :)

Thanks for the interest.

FamilyNet International Newsgate

43 Users. Seven more to go.

Spread the word to friends with TT030 computers.   If we show there is an interest, it this could be done, it would be an incredible boost to the TT030. It's proved to work out well with the Falcon, I believe in the technical abilities of the CT60 developer, so I don't see why it wouldn't.

If you support and nothing happens, you did your part. If you support and something does happen, you can say "I helped make that happen." :)

Thanks!

Doc Clu

According to Paypal, in 2004, I paid $396.00 for my CT60. That of course,
is with Paypals fee, the conversion charge, shipping/handling, etc,...

Hi,

Just bought an old Atari ST, with a shitload of discs.
Just powered up the beast, but the beast is a bit ill, it doesn't want
to read discs.
So, first conclusion, diskdrive failure. Is it possible to just add an
"normal" pc style discdrive?

Greeting, Ross.

No. Not directly.

This topic has been done to death. You have a gmail account so you
should know about google.

Hello everyone,
   Been quite some time since I posted here on the forum.  But I
purchased the original CT60 from the first run and I got a 060 that
would run at 72 mhz which at the time was the fastest we could get.
Paid like 330 or so exchangerate was much better then.  I then purchased
a 100 mhz 060 for slightly over 100 us dollars.  Then I paid like 375
for a CT63 so I had a backup board or in case I wanted to make another
falcon scream.  I also bought 2 Ethernat boards and 1 CTPCI board.  But
hope this helps

Falcon060

Hi,

Another update, 1.03. Now the program can generate HARD puzzles.

http://perso.orange.fr/gtello/downld_e.htm#prog

In fact, each time a MEDIUM one is created, the program tries to convert it to a HARD one. Not always possible! (because there must be only one solution!). Let's say that 1 MEDIUM out of 5 is converted into HARD. It's written under the grid with the difficulty level.

Generating a HARD grid lasts between 0"98 and 1"68 on my TT and between 5"49 and 8"55 on the Mega STE (and around 0"03 with Aranym...).

That's it.

Guillaume.

(Answer in english here to match the forum, but as we're both french, I'll
post on fcsa in our native langage)
O-kay, here are statistics :
- easy-level grids generated in 0.01 second,
- generates medium-level grids within 0.12 to 0.19 second,
- hard-level ones take 0.16 to 0.18 second, and
- all levels grigs are solved in 0.00 second !

That is, on my FalCT60 running at 96 MHz and secondary clock at 50 MHz ;-)
So, maybe ought you to increase the accuracy of your count ;-)

Regards,

Jean-Luc

> That is, on my FalCT60 running at 96 MHz and secondary clock at 50 MHz ;-)
> So, maybe ought you to increase the accuracy of your count ;-)

I use the system clock at 200 Hz. So, if the solution is found in less than 0,005 s, it will be ZERO, that's what happens.

Using another Timer with interruptions (for example at 1000Hz for milliseconds) would slow down the system, most of all on a Mega STE!

Another solution would be to play a blank DMA sound with a one second buffer. Each time the end of the buffer is reached, an interruption happens and you can count the seconds. Then, when the solution is found, reading the pointer into the buffer would give a precision of 50000Hz without slowing down the system.

But is it really worth it? And what about the machines without DMA sound?

Thanks for your tests! Hope I'll have a "CTT"060 one day!

Guillaume.

Hi guys,

All these solutions should provide a decent Ethernet!

A number of years back I got my old MegaST on the net using SLIP on its serial line. Not super fast but solid! The net software used some radio call letters as its ID.

Hello. I'm interested in purchasing copies of a few items I've seen advertised in old magazines but haven't been able to locate. Given their specialized nature I imagine most were sold in fairly small quantities.

Anyone have a copy of any of these they are not using and want to sell? If so please e-mail me (lener at vt.edu) Note - the numbers in brackets after some items below is the latest version I am aware of. Will also consider earlier versions of most items. Located in the US.

El Cal Calculator [2.3], Debonair Software
Hyperlink, JMG Software, - Need manual for version 2 and/or software 2.05 or higher
Recipe Box [5.0]. Mountain Software
Spelling Sentry, 1.1 or higher [1.2], A+D Softare

Spiritware Concordance [3.1], Missionware Software
Star Base [1.3] and Big Sky, Debonair Software
WinterTree Thesaurus, A+D Software

Cyber Design Disks - City I+II, Dinosaurs, Microbot, Woodlands, Vintage
Aircraft (These were advertised in STart just before it went under, not
sure if they were ever produced.)

Speaking of old Atari magazines, I have extras of many familiar titles -
please contact me if interested.

FamilyNet International Newsgate

A long time & stable Dallas BBS has offered to provide a "Favorites page"
for
the Atari BBs users.   Basically I provided a up to date BBS list of the active
Atari sites out there, and he created a place you can go to, bring up an Atari
telnet menu, and go to an Atari BBS. :)

Ever been curious to see the online world of Atari computers? Come check
out
the Prison Board BBS:

972-329-0781 (this number good for people want to try out Atari modems,
and dialup means.)
216.62.20.217 (This IP number is great for Lantronix users, and has not
changed for a considerable time.)

Never has the online Atari world been so easy to access from your Atari
computer. Simply call up the above system, get to the main menu, X for the

internet menu, and then A for the Atari menu. From there, it is simply a matter of hitting 1 through 9 for the Atari BBS's. Atari BBS's in many cases run on real Atari computers like the one you're calling with.

And the Prison board makes a great E-mail service too. :)

Let me know here if you have any questions, and many thanks to the Prison Board BBS for this awesome service.

I have 2 TT's.  I'd buy at least 1.  I own a first gen CT60 too so it's
not all hot air :-P

Thanks,
Mark

Hello Everybody,
See something interesting:
http://homecomputer.pl/tommark/sprzet/202
Does any one see Atari 520 with strange square keyboard?
Anybody know something and can write about it?
This is my friend's computer and he can't find any information.
Best regards,
Grzegorz

The official website of Burt Young has been launched. Burt Young, the
Academy Award nominated actor and maverick artist, has launched a
wonderful display of paintings. The website is a literal library
describing milestones, film and art. He can be browsed at:
http://burtyoungartandfilm.com/

Roger Burrows =EDrta:
>
> Writing to DVD on ST(e) is already supported by our software. It
> requires a Link96/97 host adapter plus a SCSI-to-IDE converter, so it
> may not be *practical*, but it is *possible* :-).
>

Simple calculation says: 1x DVD speed requires about 1350KB/sec
datarate. It is on limit of regular interfaces. And reading from hard
disk is not included in that...
So: only if that Link 96/97 adapter can simultaneous read from hard
disk and write to DVD..
Or DVD writer will make lot of revovers from buffer underrun. Disk
will be written much slower, but will be readable.
I had such situation once when dumb XP turned off DMA. Disk is
perfectry readable, but I don't like it.
Beside it, I don't like ACSI-SCSI-IDE chain... 2 adaptor costs
certainly more than IDE DVD writer.

Uwe Seimet =EDrta:

>
> What do you mean with 32-bit compatibility?
>

  Sorry, I was not clear. I meant compability with 32-bit Ataris.
However, making FAT32 support for TOS could be useful...
Biggest problem now is how to partition large disks. I talk here
mostly in ST(e) sphere.
But FAT32 could be fine for Falcon and TT if people don't want to
bother with Mint and
other...

  I made it long time ago. It was compatible with Mega ST - same chip
on same address.
But later I used ST so rare that battery went dead. And RTC modul was
on bad place when I started to make IDE IF, so I removed it! And it
stays out of machine still. I have now Mega ST, but don't see too much
use of RTC because I develop ST code on PC.
  If you send me a beer I can post project for RTC... :-)

You mean MacTCP-Connect - this hack runs only with old Macs that has
the ROM not in a File... and definitely not with MMX!

I would imagine IF he could be talked into it he would be reasonable and the rate would be close to what the Falcon version would be.

This list is first to prove that yes, there are 50 TT users interested.

I have been told that he does not have a TT 030 to develop with. I say here and now I will work with him to ship him mine to make this happen.

Thanks for your response on this. (I'll jot you down as interested.)

IIRC Andreas Kromke mentioned that an XCMD module would have to be written to allow this.

I see that I have translations of some of the docs that came with MagicMacX - I must get these online at some point.

Besides the old 16-Bit Ataris, are there any other Ataris, which are not
32-Bit?

> However, making FAT32 support for TOS could be useful...

You mean you are going to write a TOS plugin or something like that,
which supports FAT32? I do not think this is a good idea, because MiNT
and MagiC already support this.
And a plugin might slow down the Atari 1 or 2 ms when reading data ;-).

Of course it will be slow, but does it really matter? It's still better than not being able to write DVDs at all. By the way, even the TT and (unmodified) Falcon are not able to transfer 2x1350 KB/s.

> Beside it, I don't like ACSI-SCSI-IDE chain... 2 adaptor costs
> certainly more than IDE DVD writer.

Remember that in order to connect ATAPI DVD writers to the ST one needs an IDE adapter and a driver supporting ATAPI devices. An IDE only driver will not work.

I would of course be interested, and maybe someone in my neighbourhood too,
but I must add that :
1- accelerator + FAST-RAM is good, but - except those owning a graphics card -
   most TT owners must satisfy with 640x480x16 :-(
   So, why not add the ability to plug a PCI or AGP graphics card ?
   And Ethernet / USB too...
   Why only satisfy with half the job ?
2- Rodolphe is already working on CTPCI, which I'm afraid won't be ready before
   long, so I guess a board for TT won't be done (if any day) before at least
   2 or 3 years :-(
   We are used to very long delays with H/W projects - for instance, I paid for
   2 EtherNat more than 16 months ago, that I hope I'll receive one day - but
   even if we know it's normal for small quantities production, don't forget
   our machines aren't eternal... as well as people - the man I wrote about in
   the 1st line is over 80, and though he would be very happy to use his TT
   with his LCD monitor, he might not live old enough to see the project
   achieve :-(
3- very important... the price! this ought to be sensitive...

Regards,

J.-Luc

How to put 4.7 GB on FAT16 partition?
I said that don't like that write will be interrupted zillion times.
Today every kid has burner in his PC, so I don't think that ' not

```
beeing able to write DVD'  case will happen.

.=2E

  Ahhh... Why you think that I don't know that?
Every kid can today writing Atapi driver - there is all needed
documentation on the WEB, free.

I konw that at one stage many years ago I put up my hand to indicate
interest. Eventually I bought a CT63 and a Falcon to go with it. I
don't know whether my name made it onto this particular list but I am
```

still interested so, if not, please add it.

Well today I stumbled upon this ASH sold/supplied? a program called MACSTIP that does what I am after. Google/Yahoo/favorite search engines turn up almost nothing at all about this program. I've never heard about this program before as I am sure most of you have not either unless you were a MagiCMac user when it was released and you actually used it.

Also I read bits and pieces translated from German or French about a program called ICAT that sounds like it may do the same thing. I have a web page translated on this printed out and will have to study it closer to see if in fact this will do what I am after.

Well for me 2 things are important.

1: Price.
2: Will it fit in the standard TT case?

Nobody said one would try to do that. Just use a ext2fs or FAT32 partition.

Friday, March 9th 2007,

CAF49FIX is an old patch never released (I don't remember exactly why...). I think it's always useful so good luck !

http://doyeuxyvan.free.fr/caf49fix/0.9/CAF49FIX.PRG
http://doyeuxyvan.free.fr/caf49fix/0.9/CAF49FIX.ZIP

- CAF49FIX (beta version 0.9) by DOCs (2003) -

This patch allows Cubase Audio to work with the Falcon's 49170 Hz frequency !

The 49170 Hz frequency is REALLY saved by Cubase !

The original Cubase program file is packed by the PFX packer. You must unpack the program file (with NDP for example) before using this patch !

CAUTION !
Save your original Cubase program file before using this patch !

Only Cubase Audio v1.0 & v2.06 are supported.

Thanks to THE REPLICANTS, all ATARI community.

If you need NDP to unpack your Cubase program file:
http://doyeuxyvan.free.fr/caf49fix/0.9/NDP/

I received the following message from an Atari user of yore, pertaining to emulator isses and potential for some present needs. I have suggested that she check here and ask specific questions, but for now, I told her that I would put here message out here because this is probably the best place for her to get answers and.or suggestions.
Thanks!

-Dana @ A-ONE

HI Dana-

Hope you are doing well.

It's me Jen Larkin. You may remember me. My dad (John Larkin) and I were members of SSAG a *long* time ago. For perspective, I remember talking on the BBS's and coming to the meetings at age 13, back...

I came to the Delphi forum looking to see if there were any Atari people still kicking around, because I have some emulator questions.

In modern times, I use a G4 ibook for graphics design work. I actually have my own online business - Designs by Jen L - http://www.cafepress.com/lovejml. This venture requires high resolution graphics, so I do my designing in Photoshop. However, I'm finding I need to rediscover Degas Elite, Spectrum 512 and Crackart, because they provide better relative functionality than Photoshop offers in either CYMK or index mode, and I feel I will design with more precision and attention to detail if I am forced to adhere to the very strict color management offered in the old ST programs.

Anyway, I used to have NoSTalgia running decently on an indigo ibook a few years ago, but it doesn't seem to like OS X 10.3.9. I've tried running both Hatari and Aranym (sp?) with EmuTOS, which is abysmal version of TOS by the way, to no real avail. I came by looking to see if there was anyone out there who could advise me on configuring one of these emulators, or if there is another solution that I'm missing (OpenGEM perhaps?). Unfortunately, support for the various emulators has dropped off astronomically in the last couple of years. I e-mailed the creator of Nostalgia two months ago asking how to make Nostalgia run emuTOS without bombing, and how to make it access the hard drive (easily done under OS 10.2.8). No response. Not even an auto bounce!

Unfortunately, I have none of my old hardware. Regrettably, the bulk of it was sold or given away 9 years ago, when my father passed away. The only vestiges of my ST ownership are a few old manuals (GFA basic and Tigercub!) that I found in my mother's basement, which I now keep for purely sentimental reasons.

So if you are still an Atari enthusiast, and can help me out, or at least point me in the direction of someone who can I'd greatly appreciate it.

Thanks in advance, and take care.

Emutos is in very early stage, and it may happen that will be never finished, as many of too ambitious projects around. Hatari is under active development, and you may try to use it with some of official TOS (1.62 for STE). Just look around, and you will find it on WEB. I don't know something better for MAC.Usage of hard disk inside emulator is solved pretty good - you can map some of your local directories as partition for emulated Atari and/or using image file of some drive - there is sample image for download on Hatari WEBsite. Everything is configurable via config menu.

For OSX.3.9 working version of MacAranym, you may appreciate the
usage of the preconfigured mini pack that is located on my site.

Please have a look at <http://eureka.atari.org/MacAranym.zip> that
I do my best to keep up to date. Your remarks are welcome. You can
always ask questions on ARAnyM's users list <http://aranym.org/>

I personally own a dual-G4@1.25GHz running OSX.3.9 and MacAranym.

Best regards,

Hi,

Just a thought: isn't it possible to make a simple CT60 to TT adaptor? Isn't
there a kind of compatibility beteween the signals found in the Falcon and
those in the TT ? (Ram, 68030, etc...)

    This way, no CTT to design and produce.

Guillaume.

Hi,

The current version of NoSTalgia now runs on Mac OS X.  You can get it
at http://users.skynet.be/sky39147/ and it's your best bet for running
low rez ST art programs.

MacAranym is better suited for running GEM stuff only since it uses
FreeMINT (EmuTOS is just to get MiNT going).  You can also run Hatari
using a real TOS image, though I never actually tried it.

Hope this helps...

Thanks everyone for your suggestions. I do have some regular TOS
images. If I remember correctly, "Rainbow" TOS (1.4) was the one that
seemed to be the most stable with older software - at least on my old

hardware - so that's what I will try first.

Mr Maddog:

I recently downloaded NoSTalgia 1.42. Made the HDD_C file as instructed, but I can't get it to recognize my hard drive no matter what I do. Any ideas?

Thanks again for your suggestions and help,

-Jen L.

Thanks. All this is too complicated, and too much 'if' .
But, I'm now only few steps from partitioning SW for GemDOS :

http://www.ppest.org/zx/drimus.php

I just added code for recreating partition table in case of damaged boot-sector. It works extremely fast, and will restore table always when partitions self are intact. From that is needed only: adding some dialog where partitions can be set, and code for doing it properly. It is of course not exactly what Atari people wants - but may be helpful in times of removable drives and card readers.
How autoboot will be solved depends from drivers, installers.

thanks for your reply, excuse my bad english but I'm
french; so you tall me you have Session Partner, if "profix" appears on the
screen  + one record button :  it 's the version I'm looking for . Could you
tell me how I could get it, I would be so happy !
See you later

Bernard

Update

I now have Hatari up and running, using Rainbow TOS. I have it set in
ST mode (STe mode is a bit glitchy), And as long as I use a native ST
screen resolution (no VDI mode), I can run Degas Elite fine. :) I'll
try crackart and Spectrum next.

Thanks again for all your help.

Of course it isn't the same experience. But try to imagine experience of
using some new Atari models, if Atari computers comes back to market. It
can't be the same. It wasn't the same comparaing ST to XL. Things are
changing. But, I just want to say, it's the easiest way especially for
playing old games. And Steem is really great emulator, much best then I was
think it's possible.

A freeware MintNet driver for the Daynaport SCSI/Link is now available.
This is the first public beta, so please watch out for and report any
bugs ;-) You can download it from the following URL:
     http://www.anodynesoftware.com/ethernet/main.htm

Roger Burrows
Anodyne Software

Hehe... the cost for sending you that can of beer will probably cost
far more than the beer itself ;-)
I found yet another clock project here with a schematic and data-file
for programming a GAL chip:
http://www.asamnet.de/~hilgarte/uhr.php
(the clock-board in my STe has no GAL as far as I remember, so why
this is needed is beyond me).
However, there's no ready-to-use PCB layout with that project either.

All this talk about Ethernet for the ST has gotten me curious and
wondering if I could add something like that for my recased Mega STe.
So far I've found the following:

- various VME boards made specifically for the Mega STe: either near-impossible to find, too expensive or don't work well.

- NetUSBee (http://hardware.atari.org/netusbee/netus.htm) USB and networking in one plug-in card and apparently also available! Sounds promising, but in my case I'd rather not plug anything more into my already over-filled cartridge port.

- various cartridge adapter solutions: superceeded by NetUSBee as far
as I know and no longer available

- Daynaport SCSI networking adapter (http://www.anodynesoftware.com/
ethernet/main.htm): sounds promising as well, but since I'm not sure
if I will attach any other SCSI devices permanently to my Link 97 and
this solution needs that I don't know if this is for me.

- EtherNEA
software: http://home.arcor.de/thomas.redelberger/prj/atari/etherne/index.htm
hardware: http://www.asamnet.de/~hilgarte/
This solution seems to use the ACSI port (not SCSI) which I hope has a
"thru" port which will allow me to plug my Link 97 into and get SCSI
for hard drives etc.
Apparently it's an adapter which allows for a standard PC Networking
card to be plugged in.
Doesn't seem to be readily available though.

- Ethernet adapter II (http://www.asamnet.de/~hilgarte/). Another ACSI
port adapter. But it doesn't seem to have a "thru" connector either. I
also don't know if it's available any longer

Anything else I can use?
Preferrably something that connects inside the machine (I don't mind
soldering or even making the whole card myself just as long as I don't
have to design it myself!), or to the ACSI port (with a "thru" port!)
or through an SCSI adapter such as the Link 97. As I said earlier, I
don't think using the cartridge port is suitable in my case as I
already have 4 devices there.
By the way, it has to work with TOS 2.06 as well as MagiC.

I like the look of the STlabs board.

Anyone have an idea on ETA or approx price.

I'll definitely have one. I think it can be used externally or
internally. I'd personally get the external model.

It is exactly same project as in CT. And there IS a GAL in my Mega ST
(so, likely in your too).
It can be solved without, but probably instead 1 GAL some 3-4 TTL
chips.

> However, there's no ready-to-use PCB layout with that project either.

A chance for you to make it (and publish) :-)

Looks impressive any idea on when it might be available to the paying
public and a very rough price?

Any ST will do the job, but STE is more advanced and will run SW
what bare ST can not.

Your LCD VGA monitor should display Atari's monochrome mode. Only need
very simple, passive adapter - Atari's 13-pin to 15 pin VGA. No dvi
access. of course.

For color modes regular TV card may be a cheap solution. Otherwise it
requires some not so common monitors.

SW for ST? Hmm... it requires some search, visit some Atari forums...

Huh, to me atari-users.net seems to be alive. No problem to access the
site at all. I went there just a minute ago (21:28 local time)

A few weeks ago I posted a message about the Registrar I use having
serious issues, which I also used as my DNS system. (search Slashdot
for registerfly or visit registerflies.com) This has caused me to
lose 2 domains and some outages with the DNS. I'm in the process of
moving to a new Registrar and DNS system. Things I hope will be back
to normal by the end of the week. This includes ataricq.org,
atariforums.com and atariforge.org.
Atariforge.net has already been moved. Sparemint.org and Gemcandy.org
are in limbo right now.

Almost forgot, for the HighWire site, try http://highwire.atariforge.org
(or .net)

Martin,

     Strange that you can get there, but I can't. I tried it just before
posting, and I tried again just now after reading your post, and it's
still not accessible from my system. It worked just fine for me a couple
weeks ago, but not recently.

I just read something very interesting about the Mega STe built-in
SCSI at the Atari STe fan-page (http://atari-ste.anvil-soft.com/html/devdocu6.htm) where it says:

? The TT features quite a complex SCSI subsystem but i cannot find any
information of the Mega STE's SCSI subsystem ?

  ! That is simply because the Mega STE does not have a SCSI
subsystem. If your Mega STE is equipped with an internal SCSI

harddisk, it has an internal SCSI hostadapter that is mounted on an
internal ACSI-bus. Hence, the Mega STE sees your harddisk as ACSI, not
as SCSI and can also not directly access the SCSI controller on it.

In other words: this would be perfect for that ACSI ethernet adapter,
wouldn't it?
Then I could use the Link 97 for everything else (hard-drives, CD-ROM
etc.)

Hallvard

Hi,

I made long ago a modification to MAGIC.RAM (version 5.02) to speed it up at
boot time. The same can be done with MAGIC.RAM version 6.2.

My modification skips the floppy detection/boot as it's the big waste of
time when booting and that, this is yet done by TOS before launching Magic.

in MAGIC.RAM at offset $1DBA (6.2) or $1A3C (5.02) you can find (in hexa):

```
        2078 047a 4e90 4a40 6606 2078 04c6 (followed by 4e90 4e75)

        replace with:
        31fc 000x 04a6 0038 0003 04c5 4e75 (followed by 4e90 4e75)
```

"x" stands for the number of physical drives you have, 1 for A: or 2 for both A: and B:.

and you'll gain some precious seconds. Take a chronometer, you'll see!

Guillaume.

Nice work!

If you can work this idea up into some sort of patching program, it would make it available to those who don't want to get involved with sector editing.

I will be glad to host such a utility on my web site.

I don't have an atari original, but I do have an external DSDD drive in case
with PSU. Comes complete with free Mega ST2 with SSDD drive built in :-).
Seriously let me know if its of interest and I'll test it.

Dave.

Such IF is already made for ST, and is called Paskud. As I know it is not available more (except second-hand).

Do people wants still such thing or prefer ACSI port based IF ?

Some arguments: Cartridge IF can load driver from it's ROM chips, so no need to boot from hard disk - and it means that can read DOS disks without loading special driver from floppy.
It can be very fast - faster than ACSI solutions - up to 1.5 MBytes/sec in read and in write (yes). Due to hardware L/H byteswap it will read DOS disks and CD/DVD at same speed as Atari partitions (IDE IF reads CDs slowly).
There is place for some additional short utils in cartridge ROM - may put there some Timeset and other utilities.

Contra argument may be: not works with 'regular' drivers as HDDRIVER, AHDI. It needs own driver and partitioning SW. Or may do partitioning on some PC... (latest is not contra argument in most cases :-)   )

Of course Cartridge IF means that no need to do any mods in ST. Just attach and run.

Not necessarily. Writing a SCSI driver plugin (the SCSI driver documentation is also available in English if I am not mistaken) ensures that

1. It automatically works with HDDRIVER and any other software that profits from SCSI driver support
2. No special partitioning software is required due to 1.

So writing a SCSI driver plugin instead of some other driver is the most flexible solution. The SCSI driver for the Milan's SCSI bus is a good example for the benefits provided by this solution.

Good idea, everything incorporated in one package - plug-and-play on the ST!! :)

Well, I have my driver for standard AHDI IDE IF. It needs just small modifications. In any case, for me it is easier than starting with some plug-in.

Other thing is speed - plugin will certainly work slower than direct solution. Hddriver is pretty fast, no doubt, but access time is not too good with it - it adds whole millisecond to sector access. It may sound as bad joke, but in era of cheap Flash cards access time is really good (under 1ms). Actually access+reading of 1 sector time.

And maybe I want to get some money with launching partitioning SW :-)

No, it will not be slower. Regardless of the media you are reading from or writing to one or two subroutine calls (and even much more) do not result in any measurable loss of speed. The actual I/O is always the limiting factor.
You do not have control anyway over the applications which are reading or writing the data. The time most applications (even if they are well optimized) need to prepare the data to be written is much more important than the question whether the driver writing the data needs one or two subroutine calls.

> too good with it - it adds whole millisecond to sector access. It may

One millisecond is a lot for a CPU, and I doubt any driver will waste this much time. Drivers do not need milliseconds to do their work, unless a hardware protocol forces them to wait.

Yes, if one prefers "power without the spice", then emulators is the
way to go ;)

To me that would reduce the nostalgia quite significantly though.

Regards,

/Joakim

It is result of measurement with 320 times repeated random seek and 200Hz timer. So, it is accurate in range of at least 1% (but I displayed only tenth of 'average' milliseconds).

http://www.ppest.org/atari/astide.php

I did not put there which drivers are used, but you will figure out - another one was AHDI 6.03
Obviously hardware protocol not forced direct HW access to be over 1ms .

I'd have to politely disagree here. I've tried most if not all, of the current crop of emulators, and while they do a good job, they still do not and can not, replace the original hardware completely, IMHO.

The experience is just not the same either. (especially if you're having to run Windows to run some emulator - takes away the spirit of it all completely!) :)

To the original poster, a 1 meg 1040 would probably be the most compatible and run the most ST software across the board. If you can get a STe (enhanced) though, they surely are a lot of fun. :)

>  Obviously hardware protocol not forced direct HW access to be over

I once knew the IDE code used by AHDI quite well, and I cannot remember
AHDI (and would not expect) any other driver to wait for milliseconds if
it does not have to.
As far as HDDRIVER is concerned it waits according to the signals driven
by the drives and/or mandated by the low level protocol specifications.
Except for one exception: There is a special option for drives connected
to the ACSI bus, because with ACSI the drives cannot control the bus
protocol as they do particularly with SCSI. With this option some drives
are considerably slower (compared with AHDI), but other drives do not
work at all. Well, this can be the result of a timing too overly optimistic.
If I have the choice I prefer drivers that comply to the specifications
and thus provide highest compatibility and reliability to drivers that
ignore the specification and may or may not work, risking a loss of data.

A general remark related to IDE: Implementing a SCSI driver plugin means
that third-party software can make use of your IDE hardware out of the
box. ATAPI CD-ROM or CD/DVD-writer software, for instance. And provided
that XHDI is implemented on top of the SCSI driver interface software
like MiNT, which profits from this interface, will also run out of the box.
Implementing existing software interfaces from scratch instead of using
implementations that have been known to work for years bears the risk of
imcompatibilities. And it takes much more time than just implementing
what is actually needed.

Hi!
On 26 Feb 2007 10:53:10 -0800, ppera@ppest.org wrote:

> What software for hard disk partitionining for Atari ST family we
>have except HDDRIVER.APP ?
>I don't think here on SW suplied with diverse interfaces/kits, but on
>some more-less universal program?

For completeness of information, the latest version of Diamond Edge supports partitioning with FAT partitions, but:
. it doesn't support FAT32
. it requires SCSIDRV support for raw I/O, and since the best SCSIDRV support is with HDDRIVER ...

The partitioning support was inherited from earlier versions of Edge, which did their own raw i/o to disk, but I dropped that for a number of reasons.

However, if you have one of the free SCSIDRV implementations, you *could* do partitioning without HDDRIVER.
Roger

You're welcome, Roger.
I still have very much left to learn, but having already created some
new components I believe I'm on my way ;-)
Now if I could only figure out how to actually design those circuits I
need.....

You are right about CD/DVD support. I don't think to support TT or
Falcon (it has no sense at all).
Writing CD on ST(E) is possible, but it is too much for old machine.
DVD is not possible because of low bus speed, low hard disk capacity.
We will see it... There are some things fot testing yet.
I don't think that ST is nowadays suitable for some serious work. It
is nostalgia machine, and many of them is still in good shape, so
people may sometimes turn it on and play something and look how nice
was that First Word...
Flash memory is very cheap now, so why not using it?

Beg to differ, I backup my C: drive on my Mega ST that runs my BBS once a month to a CDRW. Takes about 25 mins. Love it - best backup option I could find.

> DVD is not possible because of low bus speed, low hard disk capacity.

<snip>

But for *reading* DVDs for mega storage capacity, very viable.

> We will see it... There are some things fot testing yet.
> I don't think that ST is nowadays suitable for some serious work.

<snip>

I'll disagree again - my Mega ST "seriously" runs my BBS 24/7. :)

PS If I'm not mistaken, STs are still used by some musicians.

I meant writing DVD. Myself attached DVD to Mega ST and works fine - I watch movies from (not joke).

Musicians - yeah. However, machines are too old to be reliable. I remember couple (Mega) ST what I fixed few times in years, and finally we gave up, and they went to PC.

Of course some machines are still in good condition. I have 4 ST machines, and 2 of them had serious failures in last months - video chip gone and similar.

BBS - I don't know how phone bills are comparable to nowadays low Internet flat rate prices.

Hi Dave!! :-)

Erm, now how long has it taken me to reply...

I've just bought an original ST, pre STF/M. I have a ST314 drive I bought
ages back but it's kind of a bit dead.

That Mega of yours. I'm sure they were never fitted with SSDD?? Might be
wrong.

Aly :-)

What phone bills? I've gotten my BBS, running on Atari hardware and
```

```
software, available by Telnet. See sig.  :)

....
> Except if you admit that MyAES can't be distributed with ARAnyM.

Thats totaly wrong! Look at licence terms. I have decide you not be
able distribute MyAES work team in your distribution this is quite
diffrent, and there is a lot of reasons for this, and the best of them
is regular insults and lies from your parts. Now if you wan't
technical reason there is two reasons, your archive use comercial
software inside and MyAES not support wdialog extension without
Ndialog  (we not plane add this extension) , that is too commercial.

> That's the entire responsibility of the author, that prevents its
> distribution in combination with ARAnyM. That's what is also written
> in the license. The author can choose whether it is diffused or not.
> He always refused it for ARAnyM. I'm sorry, it is just a statement.

Not alway's it's lies, in past you distribute MyAES in your Aranym
Disk, now I not accept you do this, if people wan't use MyAES they can
install it. Now if people said they wan't MyAES already install for
Aranym, I can do this sort of archive this is quite easy!

>
> I can't help it. But the author of MyAES used to accept it, until

Don't get me started ;-)
I run a mailing list for around 200 members still using Notator SL on their trusty old Atari STs. These are both hobby and professional musicians.
MIDI timing is rock solid on an ST, and for MIDI sequencing they're still no. 1 in my book! :-)

So I disagree with the above as well. It all depends what you mean by "serious work".

I'm surprised nobody has suggested a battery-backed realtime clock for the ST.
Why Atari left this out to begin with can only be described as a design flaw.

When I used an STe I bought a clock board which IIRC plugged into one

of the ROM sockets and possibly also soldered a wire or two to the
motherboard somewhere.
I believe Hard & Soft in Germany made them.

With my Mega STe however the clock came built-in, so Atari must have
learnt something along the way ;-)

In conclusion I think a clock-board would be of benefit to just about
every Atari ST owner out there (who likes to set the clock every time
they boot up the machine?).
There have been some DIY projects for this here and there, but not
really a complete and fully documented project.

IIRC, all Mega- models had built-in battery-backed clock ;-)

Actually, I myself do sometimes some 'serious' things on ST - as GAL, EPROM, FLASH programming. Or programming SW for ST. But I have already hard disk. Same is with practically all other serious users - all they have already hard disks and other peripherals. I thinked considering possible market for new interface.
From same reason Seimet's reasoning about some 32-bit compability has not much sense - Falcon and TT have built in hard disk interfaces, so they will not buy it.

Yep, my Mega ST4 certainly does. :)

So Atari got that part right with:

Mega ST

TT030
Mega STe
Falcon

but left out all the others...I can understand the original 520s and 1040s, but everything after the Mega ST started it, should have had it as well. Just my humble opinion.

On my 1040 STf I had an external clock which plugged into the romcartridge
port. It was called "Forget-Me-Clock II" and worked in combination with a
little AUTO folder program. Worked fine, except that the software had
Y2K bug. Which I fixed with another AUTO folder program :-)

Yeah, I know about those cartidge based clocks, but I'm not
particularly fond of things that plug in there as it's a mechanically/
electrically bad solution, meaning that you might end up with a
"forget me not" clock instead ;-)
Every now and then members of my Notator mailing list complain about
the program crashing etc. and in just about all the cases it turns out
that the copy-protection dongle that goes into the cartridge port has
either oxydized or gotten dirt on the contacts, or I believe in some
cases the electrical contact is bad because of bent pins.

Such a solution also means that you're not very likely to put anything else in the cartridge port (unless you want a long chain of devices such as in my case with 4 cartridge devices!).

It's been a while since I had a look inside my STe, but IIRC it was a pretty simple circuit, basically with a single clock chip (by Ricoh?) and perhaps a resistor and capacitor, and of course the battery. Mine came with a battery holder for 2x AA batteries, but I thought that seemed a bit old fashioned and clumsy, so I etched a PCB and soldered in a holder for a 3V clock battery instead (no pun intended).
I think something like that could easily be made by someone into DIY electronics, and probably sold quite a few -at least to those who use their Ataris daily, or want to date-stamp their files correctly.
The only downside for a lot of people is that they need to take their STs apart, and in some cases might even need to unsolder the TOS ROMs if they're not socketed (alternatively solder the clock PCB's socket on top of the TOS ROM chip).
For those who can't do that kind of stuff themselves they could have someone into electronics locally do it for them. Shouldn't be hard.

Perhaps an idea for those who are designing and selling add-on hardware for the ST?

Hallvard

I gather from the guy I bought it off it was a very early one, and that he installed the blitter later. I guess it mighyt have a DSDD drive and he just bought this so he had two. However I also have a couple of "home brew" external units that have have 3.5" & 5" switchable drives, so its not a real loss.

Writing to DVD on ST(e) is already supported by our software. It
requires a Link96/97 host adapter plus a SCSI-to-IDE converter, so it
may not be *practical*, but it is *possible* :-).

Hello,
I have the bug to start messing around with my Atari software again. I don�t have the space at the moment to setup my TT so this leaves me with emulation on my Mac. Years ago I ran MagiCMac 1.2.5 on a Powerbook 165 and life was good. I still have MagiCMac 1.2.5 but that only runs under Mac OSX 7.X and I have OS 9.22 and OSX 10.4.8 running on my G4 Cube. I run OSX 98% of the time on it. I downloaded the OS9 and OSX demos of MagiCMac and have each one running OK on my machine. Stinks that they only run for 15 minutes before terminating but it is at least giving me a feel of how each runs on my machine and MagiC really runs great so far. I remember reading years ago about MagiCMac under OS9 being able to use the Mac�s built in TCP/IP stack and Ethernet card. This allowed Cab, FTP programs E-mail, Chat, or whatever to use the Mac�s high speed Internet connection. Problem is I have not been able to find any documentation or configuration files on how to do this. It may be something very simple and obvious in the MagiCMac setup but since the demos and included documentation are in German I have not been able to figure it out. Does anyone know how to configure MagiCMac to use Mac OS TCP/IP and network card? If I can get it working under the demo version then I would be more inclined to spend the money to get the real deal. When researching how to do this I ran across some statements on the Web

that ARAnyM claims to be able to do this also. I have not tried ARAnyM in many years and I did not recall this feature back then. Is this built in and automatic or is there anything special that needs to be done to get to be able to use your host OS networking under ARAnyM?

I found a monitor on eBay (search computing for RGB) with ....

17" TFT Monitor with DVI + RGB Input
15-pin D-sub RGB Analog connector

Would it be possible to use this with an ST ?

Cheers
Jammer

No. You are confused by the letters 'RGB'. This is a standard VGA
monitor plus a DVI connector.

I've been looking for something like this. Thanks!
But I'm a little confused about the instructions on your web-page.
So I've tried to draw the connections/modifications in the schematic,
which I've uploaded here:
http://img144.imageshack.us/img144/3893/svideo1xk7.gif

You write that all 4 pins of the Luma delay lines should be removed.
Which pins are these on the MC-1377?
Provided that I cut those 4 lines, does the rest look fine in my
drawing?

I've got a Mega STe (with a built-in modulator sending out a PAL
signal), and I would very much like to get an S-video signal, but also
composite video and RGB (via a SCART connector) in addition to hires
mono through a VGA connector.
Will your circuit *remove* composite video from the 13 pin DIN output
when S-video is added, or will it just add S-video in addition to the
above?

Finally, when you imply that RGB is better than S-video etc. are you
referring to a connection such as when a SCART connector is being
used? For example as in my video output board I'm working on:
http://img242.imageshack.us/img242/7507/vga3by5.png

I think it's still the bottom line, that the device, no matter whether
it's a monitor, LCD TV, or whatever, has to be able to sync down to 15khz
horizontal, thats the key, isn't it?

I did not cut any lead on board. Just removed soldering around pins
with vacuum pump. From above of course.
On photo it is visible which pins are desoldered. Desoldering 4 pins
of delay line is necessary because of noise.
It will not fall down has even more pins!

Yes. No composite after mod. It is price of simpleness. But you can
add some multi-line switch and switch between composite and S-video...
(just idea, but not impossible).
>
> Finally, when you imply that RGB is better than S-video etc. are you

I suppose that it is for some of multysync VGA monitor. I didn't use
150 ohm resistors when connected to TV Scart-RGB. But for VGA it may
be good. Or that Scart is on some of new TFT monitors with Tuner,
video in, Scart ? I read tha some Samsung had too much saturation/
contrast without resistors.

RGB is better than S-video because no PAL encoding. Every color has
it's line. Picture is sharper because no chroma carrier (with only
4=2E43MHz).
S-video is better than composite because no interference between
chroma and luma. If removing chroma filter it will be much sharper.
Even align is better when no chroma filter and delay line.
Btw. I dl-ed Eagle. Will make some sch with it...

Or you can say:

If you can connect a VCR to it, then it is capable to display the two
color display modes of the ST.

I see. Yes, that makes sense.

> S-video is better than composite because no interference between

> Even align is better when no chroma filter and delay line.

What alignment?
I read on your page that you had some problems with the sync signal
because the ST's sync is apparently non-standard.
Are these problems that show up only in a connection such as yours
(capturing the ST's video output with a PC video-capture card) or also
when connecting a TV to the S-video output? By the way, those video
clips you made looked great to me. Didn't seem to be any problem as
far as I could see.

> Btw. I dl-ed Eagle. Will make some sch with it...

It's a pretty powerful program. Unfortunately it's also a little
complicated to get started if you've never used any sort of CAD
software before.
I learnt by trial and error, reading different kind of manuals I found
online and lots of patience ;-)

Hello,

Some Falcon/TT/(M)ST(e) running MagiC! 6.20 there ?
I mean : no emulator, and no version of MagiC! else than 6.20...
If so, could you please test Guillaume's soft, and report if you
encounter the same problem as me (ie : nothing displaying, except
a cursor blinking in the middle of the screen) ?

Thanks in advance,

J.-Luc

Align of white (luma) and colors. Disalign is caused by chroma filter's delay - therefore we need luma delay line. But such component are not too precise. Especially not in 20 year old machines. So if delay in both is not same it causes something like bad convergence on TVs. Look Nebulus composite video's counter.

Problems may happen even with B/W picture (from mega ST for instance) which has no PAL encoder.

On most of TVs you will not notice problems, but on TV cards often people can not capture at all. On 100Hz Sony TV picture shaked all time (with composite). Reason is non standard timing of video, and there is no simple solution for that.

By capturing video playback from Atari ST it may happen that you will get interlaced picture, although it plays progessive video with 25 fps (displaying twice every frame). It is because card can not get correct phase of video - so it may happen that on screen you see pic composed of 2 frames, what makes interlace by movement.

Yesterday I added solution against it to playback program - it just shifts displaying by 1/50th second later, so card will get correct phase. All it can be done during playback (and must be so, because you never know will it be good or not). It is too technical, but I can not explain it simpler. On regular TV phase of video is irrelevant - there is no such thing as composing 1 frame from 2 fields. Even TV stations sometimes send movies with wrong phase - it will notice only people who capturing them, not TV watchers.

> I learnt by trial and error, reading different kind of manuals I found
> online and lots of patience ;-)
>

Actually I used little Eagle long time ago in DOS times. But didn't expect that it can be used free...

Trying to find a solution which will give me S-video, composite, RGB (SCART) in addition to VGA (mono mode) and of course support for all Atari monitors via a new 13 pin DIN socket I came across the following page which describes how to build a very simple S-video to composite adapter:
http://www.epanorama.net/circuits/svideo2cvideo.html

But I'm not certain what kind of quality something as simple as that can give, so further down on the same page I read about improvements

to the circuit where there was mention of the AD-725 "RGB to NTSC/PAL
encoder with luma trap port". The datasheet can be downloaded from
here:
http://www.analog.com/en/prod/0,2877,AD725,00.html

... and includes a schematic of a VGA to composite/S-video/RGB
converter. I've extracted that schematic from the datasheet and
uploaded it here:
http://img479.imageshack.us/img479/3550/vgatosvideoschematicnt4.png

Obviously I have no need for the RGB output as that's already
available directly from the 13 pin Atari output, or should I use this
circuit instead?
Is the above circuit something that can be used with the ST?

Hallvard

Not exactly what I meant. Surely plugging-in existing hardware and
developing software for it is easier than building hardware from
scratch and developing against that.

But if you are a hardware whizz it could be easier than buying from PCW ;-)

I get your point but what happens if Philips drop that chip from their
range, same problem. Today I went searching for some info on pci cards
that use the Philips chip but couldn't pin one down. They do make
a development kit for it though in pci and isa forms.

If there are no known pci cards using the same chipset, could one
be built ?

>Oh, and what's a Milan?

They're the people that built TOS computers after Atari ;-)
```

I tried that a long time ago:

```
bash-2.05a# dosfsck h: -avr
dosfsck 2.10 (22 Sep 2003)
dosfsck 2.10, 22 Sep 2003, FAT32, LFN
Logical sector size is zero.
```

It doesn't do anything to fix the partition.

Peter

Hi,

Don't know if it's the solution, but here is a more stable version of SUDOKU.

http://perso.orange.fr/gtello/sudoku.zip

- prints the puzzle (if you have a printer...)
- generates two kinds of puzzles: EASY and MEDIUM one out of two. I'd like to have your opinion: are the EASY ones really easy? Are the MEDIUM ones really MEDIUM?

It works on my TT+TOS, TT+MyAES, TT+MultiTOS, and Aranym+XaAES.

Have fun

Guillaume.

On my ST I have a desk acc that plays video at amazing speed. I think it
is limited to FLI/C/. It came with an animation of a cartoon mouse.

I don't have the ST here unfortunately.

Original Atari software AHDI will work on small old drives.
Also CBHD works with some older drives. I think both are at:-

http://www.nic.funet.fi/pub/atari/diskutil/

However for modern 2gig or larger drives, the only software I have found
that works is HDDRIVER!.

Should work fine, both for composite and S-video outputs. If you do not need
RGB at the same time, you can leave out the AD8073 opamp buffers.

Where are you located? I have a bag of AD725AR (in SMD SO-16 housing) left,
and might give some away if shipping is not too expensive.

cu

```

I downloaded the following file: http://atari4ever.free.fr/hardware/zip/rgb2comp.zip
from Vezz' Atari hardware hack site, in the "video" section (http://atari4ever.free.fr/hardware/video.html) and after unzipping it found a file named "CONV.SCD" which looks like it's UUencoded or something similar, but alas UUdecoding doesn't work.

The readme file says:

```
----------------------------------
conv.scd   -- This is a monochrome degas picture scoded using Moshe
Braner's scoding program. You will need sdecode to decode it to Degas
format.
------------------------------
```

I have "Esscode", but apparently the above is referring to something else as it doesn't work with this file. Any ideas?

Hallvard

 This will work, although I had some oscillations with small
capacitors. Better than 470pF should be 10-100nF. Try and correct...

> But I'm not certain what kind of quality something as simple as that
> can give, so further down on the same page I read about improvements

  That circuit is much newer than MC1377. So, it should be better. And
it can give S-video and composite at same time.
>
> ... and includes a schematic of a VGA to composite/S-video/RGB

     Yes.
  For PCs it is obsolete now - every newer GF card has PAL out.
There is also MC13077 chip which can also have composite and S-video
at same time.

Geez what a bunch of tossers you all are - you don't like someones postings so
you try and get him evicted from the net, why not just use a kill file - you
DONT have to read his posts/threads now do you ?

Why is it the net is getting populated by the biggest bunch of self absorbed
little Hitlers ? You don't like someones posts so you bloody complain or mail
bomb them - grow up you bunch of fucking sad gits !

Richard.

Nope, designing the hardware is relatively easy, and this way you get the same product for everyone. Of course it's not usually as cheap.

> I get your point but what happens if Philips drop that chip from their

In our case it doesn't matter, as Philips have newer chips with different capabilities (like OTG) which are compatible on many levels.

> If there are no known pci cards using the same chipset, could one
> be built ?

The problem with PC PCI cards is that many chips are difficult to identify. The mfrs do this on purpose of course.

> >Oh, and what's a Milan?
>
> They're the people that built TOS computers after Atari ;-)

I was alluding to the fact that not many people had the opportunity to own one, including me.

Hi,

How can one replace Mag!xdesk with another desktop (Thing for instance) in
MagiC ?

Guillaume.

The "#_SHL"-Line in the MAGX.INF (usally in C:\) defines the application,
which is used as desktop.

Gru�,
Karsten

only sdecode program could made it back to degas picture

you could find it here:

```
<http://www.umich.edu/~archive/atari/Misc/scode.arc>
scode.tos and sdecode.tos are on this archive.

> corner of the screen.

I don't know why but it make the follow things:

```
-------------------------------cut-------------------------------
 wind_calc(WC_BORDER, kind = NAME|CLOSER|MOVER, x = 552, y = 361,
           w = 176, h = 320)
>wind_calc=> ok = 1, x = 0, y = 0, w = 18, h = 32
 wind_create(kind = NAME|CLOSER|MOVER, max_x = 0, max_y = 0,
             max_w = 18, max_h = 32)
-------------------------------cut-------------------------------
```

Maybe there is a problem in the binding.

Gerhard

>>wind_calc=> ok = 1, x = 0, y = 0, w = 18, h = 32
```

Okay, so wind_calc doesn't return the correct informations. That's a preciuous information, I'll see what's wrong!

Guillaume.

PS: what tool did you use to get those debugging informations?

yes, anything that would stop having to swap Floppies to save/load
stuff! Mine is a 4mb STf single floppy... When I can be bovered, I do
use a resetable RAM disk, but Cubase 3 and Pro 24 don't like it ...

It looks like it runs fine. Even with MagicPC running with wine under Linux.
Have a look at the screenshot at :
http://rapidshare.com/files/18750373/Bildschirmfoto.png.html

bye
Bernd

    Thanks a lot!
    I think it runs now on most of systems:
    - Mint + MyAES
    - Mint + XaAES
    - MagiC 6.2 + Thing
    - MagiC 5.02 + Thing
    - MagicPC/Wine
    - Mint + MultiTOS
    - Single TOS

    Thanks everyone for helping me. Most of the problems didn't come from
SUDOKU itself but from the FORTH language I'm using. I had to repair and
make stronger the WinDial library I wrote for it long time ago when only
MultiTOS and TOS were available. That's a good thing done.

    So, create and solve your puzzles now!

    Guillaume.

  Well, there is more program which can perform 25fps at fullscreen.
For instance Cyber Paint produces such files with extension SEQ. But
as I saw, those programs work so that they first decompress whole anim
in RAM and then run animation. So, it is very limited in duration,
even with 4MB RAM. It is even possible to play continous simpler
animations directly from disk, with deltaframes (what such programs
use for getting smaller files) - if there is no much change between
frames.
But for displaying movies or some MTV clips, it is not suitable. There
is too much change between frames, and poor ST with 8MHz CPU can not
load from disk, decode and write to video RAM enough fast. So, only
way is to read prepared frames fast from drive directly to video RAM.

Btw. you can check most of software with some Atari ST emulator -
Steem, Hatari.

Thanks a lot everyone.
I uploaded the Sudoku V1.00 on the belgian ftp-server.
Someone suggested that the program could save an IMG image of the puzzle to be printed. A good idea I think.

Don't know who reported that SUDOKU was "eating" the whole RAM available: that was true but I fixed that too.

Guillaume.

Foppy will soon distinct from PCs. Most of people does not use it at
all. Pen drives, Flash cards, hard disk are very cheap now.
Unfortunately, it is not enough. 22 year old design of Atari ST is not
well suited for USB, IDE.
ACSI port was never standard, and is used practically only with SCSI
drives. But such drives are not so common.
IDE is most common, and no doubt, easiest to make such interface. But
Atari ST has not bus expansion port (except Mega ST serie) . It is
serious flaw, and Amiga has much more add on cards, because it has
expansion bus.

People likes mostly ACSI interfaces - normally. they are easiest to
attach. But what I see now? There is started development of diverse
mass storage interfaces for ACSI port, but I don't see that any is
finished or available at moment. As I see, developers want full
compability, and it makes things very hard. They want that HDDRIVER
and it's partition program run flawless with interfaces.
Oon the other side, it looks that USB/ethernal adapter is finished
(for cartridge port). Question is how (fast) drivers will be made for
it.
It's little ironic that there is a lot of interfaces for 8-bit
machines - many CF card, IDE adapter for instance.
Lack of expansion bus looks for me as serious flaw now (although it is
not problem for me to solder in machine).
We will see what near future will bring...

This message is for all you techy types out there wondering about what to design next for the Atari.

Here�s my ideas on what mods/addons could be built for the ST/STE and Falcon. First off, I think they need to be something that makes the computers more usable for the majority of people.

ST/STE - an adapter that will enable you to get low/med/high resoloutions on a PC flat screen (not an LCD tele, they�re too expensive) and a compact flash card (or SD etc) adapter that plugs into the hard disk port. Imagine your ST hooked up to a flat screen and with a 1Gb CF card drive, fantastic !

Falcon � a simple adapter that would plug into the LAN port and allow you to network to a PC setup (I have heard that an Ethermac adapter may do this ???)

There are probably plenty more addons that have been talked about, but I think these would be must haves for anyone with an Atari, and would encourage people to use their real Ataris more often, which is what its all about.

Cheers
Jammer

Great ideas!
I have a compact flash adapter for my Apple IIe and TI 99 4a. For sure that I'm really using them since I got those add-ons.

The adapter for video on ST(E) could come with a PS/2 keyboard and mouse adapter, all in one.

Guillaume.

SD card that plugs into the HD port ACSI - Satandisk?

http://joo.kie.sk/satandisk/
http://ihrisko.org/~mikro/sd_preorder/

LAN 'card' for Falcon and ST - NETUS-bee?

http://hardware.atari.org/netusbee/netus.htm

couldn't find anyone doing the connection to a PC flat screen, would
need some sort of frequency doubler for the low (15khz i think)
frequency the machines produce for low/meduim res. High res is fine
just needs a suitable cable.

A 17" LCD TV costs about �50 more than a similar LCD monitor. I doubt that
it's possible to sell a scan-doubler cheaper than this.

> and a compact flash card (or SD etc) adapter that plugs into
> the hard disk port. Imagine your ST hooked up to a flat screen and with

Google "SatanDisk" :-)

Just an update..  the registrar I use for my domains is having some
serious issues. Check out this post on Slashdot..

http://slashdot.org/articles/07/02/20/0024233.shtml

This includes my Atari domains:
atari-users.net
atariforums.com
atariforge.org
atariforge.net
sparemint.org

also
gemcandy.org and ataricq.org

So, if one of these goes offline.. you know why. I am looking at
registering similar domain URL's ( different extension) on a new
registrar. When I have a backup URL's I'll post here.

Rob

I'm working on it as we speak.

The idea is that you have a printer that's supported by your existing parallel port printer drivers (like NVDI) but you print to a file. Then, you drag this file and drop it on the printer icon on your desktop. The installed printer driver will pick it up, and pipe it to the USB printer. For this to work you will need drivers that support a protocol that is close to the USB printer that you have, like ESCP for an Epson, HPPCL for HP, for example. I only have Epson photo printers, but I'm sure that as soon as I get a working program out, and the bug reports come flying in, more printers will get supported.

I know it's not the most elegant solution, but it's probably the most efficient way to implement a USB printer that will work on all configurations.

Hi,

here is the SUDOKU solver with its GEM interface. It should run on any machine, any resolution and TOS or Multitos systems.

http://perso.orange.fr/gtello/ in the 'download section, in the English column.

There's still a problem with the cursor under Aranym/Xaes. It's not displayed in the current edited box. Hard to find where we are...

Some options: LOAD/SAVE puzzles, TEST (just says Ok or Error without displaying the solution, SOLVE (to get the solution).

Well, that's all... A CREATE option will be available (I hope..)

Guillaume.

Sounds like a compatible solution.
In addition, perhaps printer drivers that print directly to the USB
printer could be implemented later on (or rather, "dummy" printer
drivers that would do the task of draggin/dropping the saved file to
the desktop printer icon).

Where will the USB interface connect to? Will it be an internal
solution, or connect via ACSI/SCSI or the cartridge port?

Looking forward to hearing more about it.

Hallvard, You have been around the atari scene a long time. I'm
surprised that you haven't heard. So for the benefit of the first time
hearers, here are 2 options that exist so far:

For CT60/3 owners the EtherNat provides Networking and USB. For
everyone else with a cartridge port, Lyndon's NetUSBee (http://
hardware.atari.org/news.htm) provides EtherNEC compatible networking
and EtherNAT compatible USB. On Lyndon's website you can see a video
of one of the NetUSBee prototypes running an early alpha of the mouse
driver I have developed.

Been away for a while and haven't had the opportunity to catch up to
see what's actually available and what's "hopefully available
soon" ;-)

Yes, just saw the video today actually.
With my long daisy-chain of cartridge devices (4 so far) I'm a little
hesitant to add any more to it if possible.
And I haven't been able to find out exactly what the USB interfaces
are capable of. For me I really only care about printing as getting a
Centronics interfaced printer is hard these days, and as most Atari
users nowadays also have a PC or a Mac it would be nice to share one
printer between the two computers.

By the way, does the USB interface use a lot of processing power from
the computer? I heard somewhere that the computer's processor itself
does all the brainwork of USB. While this probably is no biggie for a
modern computer with endless memory the situation for the ST is a
little different.

I haven't had a printer for years, but when I did have one I used a
buffered /dev/lp device driver and let NVDI print to u:\dev\lp. You could
do something like this, then it would be completely transparent to the
user. It would only work for MiNT and MagiC though.

USB controllers vary in how much processing they require the host to do. There are OHCI, UHCI, EHCI and then there are chips that the one thats used in the EtherNat and NetUSBee (Philips ISP1160), which is a sort of semi OHCI compatible at register level with some other requirements. Yes, the host chip does need a lot of work if you consider a complete fully featured USB stack. I don't know yet if this will be possible even on a standard unaccelerated Falcon 030, but in the meantime I am writing several monolithic (stand alone) drivers which have small parts of the three required layers in each one (HW driver, USB stack, and Class (device) drivers). The mouse driver has already been tested on an 8mhz 1040STFM and its silky smooth, with no noticeable performance hit (although this is hardly a scientific measurement ;-)).

  I have some ideas how to realize such adapter (already have internal
IDE interface which works with CF cards too).
People wants of course external solution, without soldering in
machine. (Flat screen is attached too, btw. :-))

 Now, question is how big is interest for such interface. In any case,
it will be much faster than Satandisk, which is too slow for any
serious usage.Compact Flash is best for ACSI ports from some reasons,
and costs just little more than SD cards.
  Let interested people post here. Price should be under 40 Euros in
any case.

PP

Looks very impressive, any updates to when freely available, i know
people are waiting for satandisk to appear but if it's a device with
CF reader + addtional IDE channel AND ethernet for an
ST............. :)

i'll have one of them !!!

That's impressive and very useful for many of us.
But would you mind uploading the actual files which you have for designing the schematic? Perhaps you also have a PCB layout file as well. I personally use Eagle, but if you use a non-common format,

perhaps you could export some sort of generic format which can be
imported into most CAD software?

Hallvard

Hi all,

My 2Gb disc is getting quite full. I also have a 20Gb disc in the Milan
all ready partitioned. A few years ago I copied the 2Gb discs partitions
onto the 20Gb disc. I also have some big files on the bigger HDs
partitions.

I now want to copy my main partitions onto the bigger drive. Is there
am easy way of doing this ?

I was thinking of doing a cp -prvu from bash but there may be a better way.

But before I do, there is currently a problem with the first partition
on the 20Gb drive.

When I boot the Milan it often reports a problem. I use 1-15-12 so it
doesn't give much detail. With 1-16 it says:

FATFS[N] vital data illegal
(recsize=0, numcl=-4177919)

I have tried to fix it with a few disc apps but nothing will touch it.

Does anyone know how to fix this or should I just wipe the partition
and try again ?

Peter

Would the X86emu code be of any use to the Milan TOS ? If it has better
80386 emulation then it might start the Radeon.

I am not familiar with X86emu but I see that others are using it to
start Radeon cards:

Yes but maybe his code size is too big for the bootblock.

```

I remember to fix problems with big endian. The VGA BIOS works until the
end (no crashes, the end is a halt code because the caller is 68K).

Regards,

Didier.

That might be used - If I google'd right, x86emu has a BSD-style license.

That leaves only the matter of space[1]: the current X86 emulator in the
Milan bootblock is below 32k of 68k assembler, and there is not much space
left.

Best if you save all relevant files to another disk. It looks that
your 20GB disk becames damaged, unreliable.
After saving all datas you may try to format it again, but if you get
some bad sector reports better forget that drive.
If no other disk, copy files to some other partition on same disk and
try with format.
Again, if bad sectors beeing reported better get another drive. As
temporary solution may be to use that drive without first partition...

Hi Michael!

MS>That leaves only the matter of space[1]: the current X86 emulator in
MS>the Milan bootblock is below 32k of 68k assembler, and there is not
MS>much space left.

Why would that be a problem? Couldn't you put that code somewhere
else in the flash? Or is it impossible to access the flash from
within bootblock code?

With best regards
Ekkehard

Hello Atarists!

ST Magazine issue 139/140 is available. This issue is very late and we are sorry for this. Due to the big delay, we decided to make a 48-page issue (instead of 36).

By the way, issue 141 will be ready very soon (end of February).

All ST Magazine issues (except 132) are available at 16/32 Systems. Don't miss the special issue about the 20th anniversary of the Atari ST.

And for console lovers, ReVival will be available soon at 16/32 Systems because the latest issues are now translated into English (issues 29 to 32). Of course, ReVival also speak about Atari consoles!

Link to 16/32 Systems:
http://www.1632-sales.zenwebhosting.com/acatalog/ST_Magazine.html

Link to ST Magazine web site:
http://stmagazine.org/
- Note our web site includes fresh news about Atari computers -

Thanks for reading :)

ST Magazine team

Since it is not the hard disk driver that reports an error but the operating system this looks very much like a logical error in the FAT. It does not seem to be a physically damaged hard disk driver, otherwise the error message should be different, e.g. an alert box displayed by the hard disk driver.

In case of an error in the FAT most hard disk tools should be able to find it and maybe also to repair it. DISKUS has special functions for checking and reparing FAT (FAT16, not FAT32) file systems, but it is German only. If you know a bit German you can give the demo version a try: http://www.seimet.de/diskus_english.html. But please note that the demo can only check file systems, not repair them.

Actually, I don't use software for design. I do it on paper mostly -

it is creative process, where computer can't help much.

In any case, I will post schematic for simpler version of interface. I can draw it with free Express SCH . Then Express PCB can import schematic and may design PCB. (Link is on page)

Or you know some other, better freeware - which has format more usable in other programs?

I am sure it is just a logical disc error.

I have the Diskus demo but I don't speak enough German to risk using it.
When I try Diamond Edge it won't switch to that disc because it doesn't
recognise the boot sector.

Is there anything I can do with HDdrutil ?

Regards,

Peter

Macromedia ?! Not very useful on the atari.

With all this USB work in the pipeline for ST, Falcon and even the 8-bitters (I believe). I feel that us clone users might be left behind. Hardware-wise these are the easiest machines to USB enable, I could just stick a pci card in. Have ny tests been done with a Milan and a pci USB card ?

No, HDDRUTIL won't help you here. In general, if a boot sector is not recognized you should read the physical hard disk sector the boot sector resides on in order to check and/or repair the contents. With Diamond Edge you can surely do that.

I wonder, though, why MiNT seems to report something on a FAT sector.
Looks as if MiNT can access the boot sector but Diamond Edge cannot?

As far as DISKUS is concerned, since the demo version cannot write data
to the drive you cannot damage anything with it.

It's not that simple - by 'tests' you mean 'development', and by 'easiest' you mean that you can feel free to pop down to PC world and buy a cheapo USB card? Do you recall if this PC hardware hand-me-down strategy worked for Network Cards? Do you know how many USB controller chips there are on the market? And of these, how many standards do they follow? Why do you think that windows has tons of drivers just for USB host chipsets? We cannot rely on everybody to buy the same USB card (which won't exist on the market maybe 6 months later), and have it work with only one driver. It's impossible.

Oh, and what's a Milan?

I disagree :-)
After I started to learn Eagle I've found that it's extremely useful. Not only can you edit your schematic at any time without having to use your eraser or worse yet start drawing your schematic from scratch again on the paper, but you can also create a PCB from the schematic very easily.

Actually, once you're finished designing the schematic in Eagle you can just press the "board" button which presents you with a PCB where you place your components (already connected together thanks to the schematic design section), and when you're happy with it you can have Eagle automatically route the PCB traces where it finds the distance shortest etc. Very impressive! Naturally you can do this manually or combine the autorouting function with manual routing.

And of course you can share those files with anyone else so they don't have to start the whole project from scratch again.

> In any case, I will post schematic for simpler version of interface. I can draw it with free Express SCH . Then Express PCB can import schematic and may design PCB. (Link is on page)

You mean this one? : http://www.expresspcb.com/ExpressPCBHtm/Free_schematic_software.htm

I had a look at that page a while back, but since I'm on a Mac I can't use it. Besides, doesn't that program use a special format which is meant for people to order the PCBs from that same company so you can't save it as a format which others can use to make their own PCBs at home or order from wherever they like?

> Or you know some other, better freeware - which has format more usable in other programs?

I've tried a bunch, but as I've never had any experience with PCB design software in the past I found it very frustrating to figure out these complicated programs.
Besides I learnt that many relatively unknown programs with few users also meant fewer parts for the schematics and PCB design (it takes a while to design your own parts!).

So learning about Eagle, hearing that it's very popular among hobbyists and with large libraries I found the choice easy and decided to invest time in learning it. I'm still a beginner, but at least I understand the basics.

And because of it having so many users it already has huge libraries of parts available and even a couple of newsgroups for support directly from Cadsoft (the company behind it) and is available for Windows, Mac and Linux platforms. The free version allows you to create PCBs up to 100 x 80 mm, which is one of the reasons it's so popular with hobbyists (if you need to make bigger PCBs or have more than 2 layers you need to buy the professional version which is expensive).

You can download the free version from: http://www.cadsoft.de/freeware.htm

I'm curious, what sort of differences are there in the RGB signals that component video sends out from, say, a DVD player, versus what comes out of an ST? I'm not talking about composite or S-Video, I'm talking about the red/green/blue RCA jacks on things like DVD players and such. I'd like to get a crisp picture from the ST over these lines if possible.

Anyone got any ideas?

They are completely different. The 'Component' you are talking about
is not RGB, but Y'PbPr. The output from the ST is RGB and SYNC. Have
you got another connector on your TV that offers RGB input (like SCART
does - but it doesn't exist in the U.S) or composite?

ST has RGB as it is usual by computers. But I saw some DVD players
which have RGB outputs too - probably not case in US.
You may buy some RGB monitor - not VGA. Amiga, C64 monitors are
mostly good.
Other solution is S-video output - it can be made on every ST. Not so
good as RGB, but is cheap:

http://www.ppest.org/atari/stvid/stvid.php

Third solution is moving to Europe :-)

Here's something that confuses me...  Most European LCD televisions with RGB
scart sockets will accept 110v-240v, and will also process NTSC signals.
And.. have a wide variation of UHF/VHF tuning capabilities.

It makes me wonder why they're not being sold in the USA.  It'd be the ideal
solution.

Type "LE19R71BX" into Google.  That's the one I've just bought.

Can't confirm! Fiffi v1.30 hasn't any problems with and FF 2.0.0.1
also not...

Hi folks. Sorry in advance for my lameness.
 I was curious if the CT60/63 was still being produced. I went to the
web site, and it didnt indicate this either way. Also, there seemed
to be varying email addresses, and wasnt 100% sure which one would be
the best to use to try an contact the maker.

Any help would be appreciate.

Thanks,
Chris Ryan

Yes. The bootblock has to bring up the card at least in textmode and switch to VGA mono before starting TOS. There is a (limited) X86 emulator that can emulate the card BIOS, but that may need fixing for newer BIOSses.

Hi again!

The sudoku you solved has 23 numbers in it, but I think the hardest one's only have 17. Here is one with 20 numbers only:
http://de.wikipedia.org/wiki/Bild:Sudoku_9-9-20.gif
Maybe you want to try this.
Anyway, nice to read that you did it in Assembler :-) Cool!

Matthias

It seems that the number of numbers is not directly tied to the level of difficulty. Because, solving your puzzle with 20 numbers was made without any guess: only elimitations with rows, columns, blocs and pairs.
The one I tried before requiered 6 levels of guesses before bieng solved!

Yes in assembler it was the best I think because I use a lot of binary operations to make the eliminations and my puzzle only needs 324 bytes of memory with bit fields. So the cache of 256 bytes gives a real power.

Guillaume.

I did test the site with lots of ftp-clients, wsftpPRO (Windows), gftp
(Linux), Kasablanca (Linux), ncftp (windows and Linux), blazftp (Windows)
and rbrowserlite (Mac OS X). All works fine.
I did tried out CuteFTP today and yes initialy I had the same prob as you
have. However this is just a setup problem. I enabled pasv. mode and
firewall access and now CuteFTP does list the directories.

HTH,
Martin

I know nothing about the Milan, but the TOS404 works on the M5484LITE
Coldfire board so nothing is impossible, if the flash size is 512 KB I
can create a 3rd target.
The TOS boot for example in 1280 x 1024 x 16M (boot and desktop) on a
CompactFlash card. A 2nd life for the Milan, just an idea... Peter you
have a 060 on your Milan ?
The PCI bridge isn't a problem the PLX 9054 is compatible with the PLX
9080, but I need some sources for insert some patchs like serial port,
keyboard and mouse, disks, there are an IKBD on the Milan ? Else it's
impossible without lost time, without hardware to create another target.
Maybe another problem the PCI drivers and TOS patches are GPL.

Regards,

Didier.

Oh sorry not 512, 1MB !

The Milan has 512KB Flash - part of that is used by bootblock and modular drivers (eg. for PCI SCSI cards), but since the TOS is compressed, there is plenty of space left.

>The PCI bridge isn't a problem the PLX 9054 is compatible with the PLX

>Maybe another problem the PCI drivers and TOS patches are GPL.

GPL would definitely be a problem - I doubt that you can legally incorporate GPL code into TOS on any machine, because TOS is not GPL and not GPL-compatible. Distributing patches only moves that problem to the user.

However, even without the licensing issues, it would not be that easy: the Milan uses a heavily modified TOS which integrates code for the Milan hardware, PCI BIOS, hardware emulation etc. - I doubt any patches against a binary TOS 4.04 would apply easily.

However, i do not see why TOS patches should be needed at all: the graphics driver can be loaded from the auto folder (or as a pre-auto flash resident module on the Milan). That only requires basic standard VGA init code in the bootblock - does ATI provide documentation on that part that is usually handled by the X86 BIOS ROM?

cu

Sounds very interesting. Since I love coding in asm I'd love to see the
code. Why don't you include it in the zip? That would be nice :-)

Cheers, Ingo =;->

>

You can insert (open file, of course) them in 'Steem' Emulator and read and write.

If you have problems making Disks with your PC-Floppy, greater than 720K:
Sending the .st file with a Nullmodem Cable (PC-Atari) and writing then with the ATARI to a Disk is also a solution.
But parting the .st file onto 2 or even 1 720K disk, with an archiver program for example, STZIP. So you don't need a serial cable connection and you can transfer over 720K formatted special ATARI Disks. Although, I don't know how much compressable the .st files are, in the worst case you have to use 2 disks to archive a greater than 720K Game/Disk.
Zip can make verbose files, with 720k each or 1440K... Option -v720 or -v1440 for HighDensity or even -v500 should work and would make an archive,
parted into 500K files.

I say this, because I have heard about troubles with PC and making ATARI disks. In this case the ATARI itself is your help. Getting the .st file there, is hopefully well explained by me now :-)
MS-DOS formatted disks 720K should work well on ST!

In 'Steem 3.2' root directory is also some text to read.... DiskIMG program, how to use... etc etc...
I think .st files can be read by any Computer. Atari or PC... Amiga, Apple OS, Linux and so on. Making floppies out of it, is best managed by a ST, of course, and recommendable to do so (to prevent I/O errors, due to floppy-drive differencies, also PC's have known problems between two different PC Floppy drives, other Brand etc.)!!!.

Best Regards,

Daniel Mandic

Sorry for my lameness in advance.

Is the CT60/63 still available (being produced)? I went to the website and there didnt seem to be an obvious way on ordering one. I tried the email addresses. One got bounced back and the other I havnt heard anything from yet. I kinda curious if I am using the proper email address.

If anybody would happen to have the correct contact email address I would greatly appreciate it. Also, if anybody know, how much is the CT60/63? Which one would be the better one to get?

Thanks,
Chris Ryan

Ok! No problem.
I'm working on the interface to make it more human. I'll upload the new version with the source code. I'll tell you when it's done.

Guillaume.

I order CT63 in november 2006. and pay it 300euro. Now I waiting for
rolophe to finish this, as he said, last batch of CT6x cards!
But I think there is a chance to get one CT63 card if somebody gave up
from his CT63 that he order at the end of 2006.

I send you Rodolph email on your email adress ;)

cu

I use also an LZ77 compression for the PCI part (above 0xEA0000), I
think also use space between 0xFC0000 and 0xFF0000 for get free space
for USB drivers.

With sources of specific hardware, it's easy, else without sources and hardware for test it, it's just impossible. I have worked on M5484LITE board patches, on month before get the card, and 2 months for get a TOS working with the Radeon.

> However, i do not see why TOS patches should be needed at all: the graphics driver can be loaded from the auto folder (or as a pre-auto flash resident module on the Milan). That only requires basic standard VGA init code in the bootblock - does ATI provide documentation on that part that is usually handled by the X86 BIOS ROM?

I don't know, actually the X86EMU used works fine for start the VGA BIOS (91KB), but I have tried INT 10 without success (black screen), it's not important for me because the init of the card is finished and the radeon driver works fine (256 / 65K / 16M), the driver start before the Setscreen 1st call. The VDI rebuild in assembly language in ROM is also faster than fVDI because direct calls are used for replace generic fVDI calls, something than 10 times faster on blitting and text functions.
And the BIOS part is not inside the FVDI.SYS drivers, so it's impossible to use new Setscreen modes, and other functions added like VIDIX (actually fulscreen with the scaler for Aniplayer with a YUV or RVB source), or TV port on the Radeon AIW (this lastest part isn't finished). Sure it's always possible to work on a TSR program started before fVDI.

Regards,

Didier.

I can, being around at the time. I bought an STE because I wanted to write MIDI programs. At the time I bought it it cost around the same price as a PC midi card. �200 or say $/?400 It was an affordable computerer. And on adding a second floppy I could write decent programs using the free Sozobon compiler which worked well. Later when I could afford it I added a 40 megabyte hard drive. I then used this to program. I wrote and adpated games for my kids. I wrote a program to get the Sysex data from my Yamaha organ, edit iot and write it back. All in All a very nice affordable machine but already starting to look dated next to PCs.

On the other hand I think perhaps the STE was the machine that finished Atari off. It could still only do a 64 color display. It had no expansion capabilites. SCSI adaptors still cost a small fortune. No where to go up at a reasonable price.

Then look at the Falcon, which should have been the next step up. From looking through old adds I can see the cost was �1,300 / $ 2,600. At the time this was prohibitvely expensive for any one other than the proffessional musician. Yes it could do Hard Disk recording but only a small fraction of the public wanted that. And at the lower end STs were starting to look very sad against PCs with VGA displays....

Nope not suprised it was their swan song.

>
> Tim

Dave.

P.S. and then there was my favourite gripe. The Atari Developer Program. It cost more to join that than the cost of the Atari. Talk about cash cow...

Hello,

I'm working on my SUDOKU solver and I'm using a custom "form_do" to use a
dialog box into a window.
With normal TOS, it works perfectly.

Under freemint+Myaes I just can't fill any FTEXT. Cursor goes from one field
to another (TAB or arrows) but I can't write any digit into the boxes.

Guillaume.

Wow! What model was that? I bought the first one I could find available in
my area, for $799 base model. Added a small internal HD and RAM, had a
total of around $1000 in it...

Thanks.

You can make usage of freeMiNT+XaAES from which latest snapshot is there

<http://storage.atari-source.com/atari/mirrors/cvs_builds/>

find help either on this unofficial forum

<http://www.atariforums.com/list.php?26>

or on the freeMiNT/XaAES official mailing list

<http://sparemint.atariforge.net/mailinglist/>

If you use ARAnyM, freeMiNT+XaAES is already installed in

<http://eureka.atari.org/xa-my-aes.zip>

Mind that MyAES can't be distributed with ARAnyM according to its
explicit license <http://myaes.lutece.net/LICENCE>

I hope it helps,

Regards,

Hi,

Sure, I will send you a .FLM Video with Sound that I captured
awhile back.

I have it Zipped and ready to go on my VAIO Laptop, but
my Son is using it at the moment.
Will get it to you ASAP.

BTW, unzipped its around 9 Megs.

If you need it to be smaller then let me know.

Thanks,
Barry

I am looking into getting an Atari ST. I grew up and was in high
school/college during those years and have a desire for a lot of the
older computers. I'm actually getting a Apple II currently and am
looking at a Amiga 500. With Atari being so big back then I want an
Atari as well. Should I look at the 520 or the 1040 or is there
another model? Since I only used Commodore back then I know little
about Atari.
As well, my main concern is the monitor. What type of monitor does
the ST use? I have all LCD vga/dvi monitors now. I prefer to be able
to share monitors so would it output to these?
What are the best sources for ST software/games?

    No, that's ok with 9 megas.
    I wait for your FLM.
```

hello guillame,well whats new?
i too have been fooling around with this type of thing , but under
normol tos.i dont use the Xaes of sparemint ,sorry..........
my only suggestion is make sure that the length of your default string
"ptext"is specified in the "ted info" and that the template
"ptemplt"and valid "pvalid" strings are the same length too..as your
text string.

second thought is maybe drawn to wrong vdi handle?

i really don't know for certain but hope this helps.

what i been doing is similating a backspacepress before cursor is
drawn so field is cleared and ready for input once drawn..this keeps
the cursor to the leftmost of the area instead of right .
so are you able to move your cursor to the left and the right of your
field

instead of up and down?

also when your object gets drawn include a larger number for the
"levels to be presented"

ok
charles

Go for the Mega 4STE.
The video output on the Atari's was non standard.
As for printers...start with one of the Epson dot matrix printers. You
will not need any drivers.

I would say the best st to get is a regural 1040 st. This is the most compatable of them all. I have 1 1040, 2 520's, and 1040STes, and thanks to a ebay jerk a free Mega STE. The mega has some compatablity problems with some games, but not much.

Let me see if I understand all this...

Didier, your Radeon code is in a modified TOS ?
The Milan uses a bootblock routine to get into VGA mode and then starts
the ATIDRV.PRG from the AUTO folder to provide the full driver.

The current Milan bootblock doesn't start the Radeon in VGA mode.
What documentation is there about booting the Radeon ? Is it very
different to booting the Rage ?

Other thoughts

Future version of FreeMint may not rely on TOS to boot.
Could EmuTOS be patched to work on the Milan to avoid licensing issues ?

Anyone wamt to borrow a Radeon card ?

Regards,

Peter

Ronald,

 I only found sterling prices. I guess we had the old thing where US prices
were cheaper. The price was for a 14meg model with HDD included. But how
much was the base ST(e) in the US at that time $250 dollars? Three times the
price for the Falcon! I cannot deny its three times the machine, but
considering the original STs targeted young folks for games play it was out
of their budget....

Dave

Get Any STFM/STe. Try to get a 1mb machine.

If you get the Amiga 500, and if you get it with a 1083/1084 monitor,
you can get another cable and share it with the ST.

That not what I read. Maybe the French and English texts read
differently, but the English part says that you CAN distribute it with
ARAnyM, just not COMMERCIAL emulators like MagiCMac. From the LICENCE
text:

CONDITION OF USE OF MYAES

MyAeS is free for personnal use, You can install it on your computer freely, MyAeS can be distribute only if product is totaly non commercial(for example AFROS disk for Aranym at Aranym web site) . In all other cases (magazines, commercial emulator like MagicMac etc..), can't be distribute without agree from the authors.

Yes but it's possible tu use the VDI part (radeon.sys) with fvdi.

> The Milan uses a bootblock routine to get into VGA mode and then starts
> the ATIDRV.PRG from the AUTO folder to provide the full driver.

Actually with X86EMU I run the VGABIOS of the Radeon. I have tried without succes to set a monochrome screen with INT 10, but it's not important on the CT60 because the radeon driver works before the boot screen, the XBIOS Setscreen has new modes until 1600 x 1200 x 16M (with virtual screen or not).

> The current Milan bootblock doesn't start the Radeon in VGA mode.
> What documentation is there about booting the Radeon ? Is it very
> different to booting the Rage ?

You need to run the VGA bios with a good X86 emulator. Latest VGA BIOS
has 80386 code.

> Other thoughts
>
> Future version of FreeMint may not rely on TOS to boot.

Humm, not by me... For you I have just my solution (a 3rd target), but I
need sources for specific Milan hardware.
Emutos is a sort of alpha TOS, on the Coldfire board I use his BDOS part
and for exmple it's impossible to rename a folder. For me Emutos is too
light for run Falcon and Milan machines, it's just a tool for Aranym.

> Anyone wamt to borrow a Radeon card ?

Regards,

Didier.

> text:
> ...

Well. You have no clue why MyAES is not included, either on

<http://ebmodel3.atari.org/Pack_3D/> or in
<http://eureka.atari.org/MacAranym.zip> or in
<http://eureka.atari.org/xa-my-aes.zip>

that are 3 well known ARAnyM configurations where it is not included.

Except if you admit that MyAES can't be distributed with ARAnyM. That's the entire responsibility of the author, that prevents its distribution in combination with ARAnyM. That's what is also written in the license. The author can choose whether it is diffused or not. He always refused it for ARAnyM. I'm sorry, it is just a statement.

I can't help it. But the author of MyAES used to accept it, until he decided to promote the ColdFire machine. I was at this period involved in MyAES developments and its debugging. The author denied me the benefice from my work, and rejected me.

The configurations that I'm speaking about are not commercial. It should be allowed. But the author have a precise idea of what type of work he want to promote. I had to pay the price of this peculiar way to license MyAES. One must be aware.

XaAES is free and no such tricks in the terms of the GPL license. That's why I'm advising XaAES, and to benefit from the community around its developments. XaAES is a great thing, indeed.

I don't want people to loose their energy pure vainly.

Regards,

The new user reg process is bad these days. It's enough trouble as it is
to get people to use BBS's at all now.

Thanks,
Mark

As far as I can remember, and someone please correct me if I'm wrong, but
I believe the base model STe at that time was $399.00 in my area.

I'd have to agree though, for non-dedicated Atari fans, it was probably a
bit on the steep side... :(

Well, at DarkForce, we've been averaging over 100 calls a month, (sysop
calls are excluded in that count, although my regular user account isn't)
but then, I'm giving away prizes as incentive for callers to visit us. :)

I was having a problem with users abusing the bbs file section, and after I
had a hard drive error. I just added this so I know who is calling.

If you're in Europe, the output couldn't be more standard. 15.75Khz is what the RGB SCART/EUROCONNECTOR on the back of televisions uses. 31.5Khz is basic VGA.

Things are brilliant are the moment with the new LCD televisions coming out, since they accept both SCART and VGA inputs. It's as if they're made for the ST.

Unfortunately there is no SCART standard in the USA.

Hi.

You can find almost anything you are looking for.
Images, video, mp3 music, the real news from around the world... it's all inside waiting for you.
Take a look, I know you'll love it as much as I do.
They give you access to some of the best groups others may not carry.
With some of the fastest connections around it's no wonder people love it and keep coming back.
Take a look at all the great features below and imagine! You'll LOVE it.
One thing I love about them, they don't keep log files of the news I read or files I download.
Great prices and support await you as you travel into the beautiful world of premium nntp access.

Posting allowed!
Convenient thumbnail indexes
Streaming audio and video
Very long retention
Blazing fast downloads

Ok the address is http://www.newsdude.net hope to see you there

A really nice and clean Mega ST2 with keyboard in very good working
condition. Comes with mouse and packed in original atari box.
Your zip code gets you shipping charges. USA sales only and then only
in continental US.
payment by money order.
i am asking 100.00 OBO.

I made first tests with playback from DVD/CD. With IDE interface - it has good transfer speed, may be up to 1400KB/sec
Works fine, no any stop, slowdown - tested with NEC 2510 and Pioneer 116 DVD players, and RW DVD & CDRW..

But not with standard drivers, because of required byte swapping.
More on site: http://www.ppest.org/atari/movpst.php

Compression: I don't see a way to achieve some useful compression with clips like those on site. Any better compression would need too much CPU time dor decompress. Gain could be only 10-20%.
For simpler matherial, with less complex scenes RLL may be choice. Or some kind of delta frames - for case where there is little change between scenes. But concept gives not much space - because of used double framebuffer displaying we need to take changes not between present and previous frame, but 2 frames back, what spoiles possible gain...

Hey guys,

Looking for a Mega STe case, or perhaps a TT case if it can be modified to accomodate a Mega STe. I didn't look into that.

Obviously not looking to pay very much, but let me know what you want and we'll talk.

The case doesn't have to be very clean at all, just looking to get rid of my 100 pound tower that currently houses my mega ste and replace it with something compact and plastic.

Thanks,
Mark

I made some experiments with video-audio playback on Atari ST(e) machines. It is possible to get smooth playback with 25 fps and full low res 320x200. :

Yes, I know about. Your program is much more complex and is
certainly many work in it.
But it is simple not for machine like ST or STe. I achieved 1.3 fps on
STE at 320x200, and in B/W, what is more slideshow than movie
playback.

Only reading raw bitmaps at 25 fps occupies about 80-90% of machine's
capability. For playing back compressed videos at 320x240 for instance
100MHz CPU may be not enough fast - depending from used codec.

Other thing is memory usage - my player uses not any buffering, so it
can play practically any length on machine with 512KB, without any
stoppings.
I just think about making DVD with some movie in LAV format. There
should fit about 90 minutes of uncompressed video with audio. But it
will require direct sector access instead slow file access to DVD.

Yes, you're right with the low speed with MP_STE when decoding AVI/MOV.
But I also have the FLM format from Lexicor that I extended to add sound.

It is compressed but the decompression is very fast because the images are stored in the video format 320x200x4 planes and that the decompression is done directly in the video ram.

Your idea of a DVD in LAV format for STE is good.

But I would like to try to make a FLM from one of your videos and see

two things:
- does the compression give the opportunity to store more than 90 minutes onto your DVD
- does the uncompression allow the 25 fps?

Guillaume.

Doc,
 I seem to rember it was a little fiddley to set up. I used HDDRIVER7.9,
V0.70 of the anodyne driver (found the problem with ARP), and the latest
version of Sting. I have not tried later versions of HDDRIVER. A couple of
things to note:-

1) I could not get this to work when booting HDDRIVER from a floppy. It had
to be installed on the gard drive.
2) I could not get it to work with any other SCSI software, but possiby
because of (1) above.
3) you need to manually configure IP mask, gateway etc....

If you are still having trouble I'll post detailed config info...

Dave.

I would have thought that if you could get the MAC to act as a PPP or SLIP
server you could use Sting and TCP/IP to transer files.

Come to think of it, my Mac doesn't even have serial ports. It has a
built-in modem, but the connector for that is just for the phone
line.
Looks like I either need a networking card of some sort, or abandon
the idea and rely on floppy disks and/or CD-/DVD-Rs for transferring
files between the computers.

Does anyone know if a ROM dump of the FaST BASIC cartridge is available to
download anywhere?

Been googling for ages now, and no luck.

Thanks

Well, I had similar thoughts about compression. Tried very short
clip in Cyberpaint - it's SEQ format which is fast. But it compressed
very little, probably because it was random dithered. That format is
of course not for longer animations, and as I saw it first depacks,
then plays.
Maybe some RLL based algorithm can be enough fast, at price of lower
compression. Usage of move.l (a0),(a1)+ is mandatory :-) .
Some anims were very good RAR-able, so RLL should compress them at
least to some 40-50% of length.
I will see it, and you may write me e-mail (link on site), if need
some help about fileformat (what is very simple at moment, with SIGN
and framecount only).
Has your FLM format individual palette for each frame? I ask it
because looked to Aegis Animator's format (forgot extension), but
there wrote that it has only 1 palette for whole anim.

Thank you Marc. I enjoy reading these. :-)

You don't by any chance have any of the old ST World books do you. They're
the ones I had from about '85/86.

Well use IRC, join #atariscne on Ircnet and you have Atari chat 24h/day,
7days a week :)

I can't wait for issue 4. That's the one that opened me to the world
of ST. I bought the magazine because I desperately needed a blank disk
for college. After spending my lesson not doing my work, but reading
the magazine (especially the section about the new STe) I knew I had
to get one.

Xref: g2news2.google.com comp.sys.atari.st:5169

As many of you already know, a stubborn sysadmin of the Belgian
ftp-server ftp://chapelie.rma.ac.be closed down the server. Saka tried
to convince the new sysadmin to restart the server but alas he refused
to do so. This means the chapelie is a dead end.

But now there is a new Belgian ftp-server. Saka has set up his own
server and has kindly given me the permission to use his server to
maintain an Atari dedicated ftp-server. As the sysadmin of the Chapelie
refused to give Saka a back-up of the former ftp-server I had to
rebuild things from scratch. As it is, at this moment the new server
doesn't have all the archives that were on the Chap yet, but I'm

working on it.

You can find the new server at this address:
ftp://kurobox.serveftp.net:3021

Be aware though, due restrictions of the ISP which hosts the server one must use port 3021. By default a ftp-client such as gftp (Linux), aftp (Atari) or wsftp (Windows) uses port 21 but this can easily be changed.

If one use a browser just use the address as mentioned above.

Anonymous users can only upload things in the incoming dir. Please place a short description in plain ascii of every new upload you do. This way it's for me much easier to find out where the archives must be placed.

For complaints and remarks about software send a mail to:
nightowl /AT/ scarlet /DOT/ be

For problems and remarks about the server send a mail to:
saka /AT/ village /DOT/ uunet /DOT/ be

TTFN,
Martin

Hi J.-Luc!

I have got a key in several days from Herrn Schaffner.

My dear, I do not open E-mails for 14 days.... or reading Usenet can
also vary from minutes to days. Yes, days :)

Kind Regards,

Daniel Mandic

Hello,

I wrote a Sudoku solver. You can find it at

http://perso.orange.fr/gtello/sudoku.zip

it comes with ST and TT versions. The interface is as ugly as possible but
the solver seems to be efficient. I tested it with very hard puzzles and the
```

solution comes really quickly (0,01 second on my TT and 0,06 seconde on my Mega STE).

Interface in french but a SUDOKU.TXT includes a short english explanation.

Have fun!

Guillaume.

1994 IIRC. Atari did flog of alot of older bits and pieces too tho.
IIARC even STFM's were being sold at the time of their demise.

Mark

No, but there is known trouble with DD-Floppies and Windows XP. There are some patches around, but they did not work. Who cares...

DOS (MS-DOS) and my trusty 'TEAC' 3.5"HD IBM-PC Floppy made always good efforts to me. ST Disks, AMIGA Disks, Synthesizer
(Sampler) DD Disks etc.

Best Regards,

Daniel Mandic

Hi Chuck B!

I think you can also copy your needed files to a DD or HD (when your ST
is outfitted with a HD-Drive) Floppy and copy them afterwards to your
ST Harddisk, or start them directly from the MS-DOS5 formatted Disk.

Some Games come with other format and a plain 720K Disk would be too
small to carry all data. So STDisk, or similar.
Normally a PC Floppy can write up to 1MB or 2MB, for HD variants. 4MB
with ED, etc. Unformatted...

924KB ATARI diskettes for example... STDisk..PC (with real DOS) No
problem!

Best Regards,

Daniel Mandic

Hey Guillaume,

MPLAYER supports VideoMaster FLM videos with sound.
But the last version I tried there was a bug on the sound.

There were 2 VideoMaster Carts, One just for the Falcon and one for
the ST/STE/Falcon.

Not sure if this bug was fixed but here is some info that may help.

For VideoMaster Falcon videos with sound. The sample Rate is Fixed at
12.292kHz 16Bit Stereo. According to the VMF Manual.

The Earlier VideoMaser cartridge for the ST/STE/Falcon didn't have a
fixed
frequency! It started out at 1KHZ and went up to 16KHZ in steps of 1
KHZ.
I can't find anything in the manual about the samples being mono or
Stereo.

Or 16Bit or 8Bit.
I think they are 8Bit Stereo, but do not know for sure as I have no docs
on this.

Anyone know for sure?

Reason I mention this is that I remember getting static when playing a
Video and
Sound FLM file recorded from the VideoMaster Falcon Cart IIRC.

Maybe you can do a update to Mplayer to play all the VideoMaster Sound
files
correctly if you haven't done so already.

I still can't beleive they ended on the Falcon 030, they were just
getting going when they released them, Awesome computer :)

Agreed! Oh what I would give, if they could have lasted just that little
bit longer and gotten the next Falcon model out the door. The one with an
'040 processor, internal slots, CDROM etc,...

Imagine what the ever innovative Atari community could have done with that!

:)

FamilyNet International Newsgate

Atariscne is still out there? Nice!

Well there are two other chats. One happens on Sunday at 10 am CST (Euro Chat), and another on Tuesday at 8 pm CST at telnet://www.atarinews.net

When logging in, follow these steps... bbs, bbs (enter name & password), enter, t for talk, c for chat, enter a name, and then you're in!

The other chat is another Atari chat also going on 24/7. The way I know to get there is a telnet interface, since I get there with the Atari 800 I have.
telnet://irc.atarichat.net

On this, type "atari" at the login, don't worry about a password, enter a name, and you are takien directly to the IRC chat. They meet specifically at 8 pm on Thursday (CST) but you can go there about any time and find someone.

It is truly a good tie to be an Atari user. ;)

Doc Clu

FamilyNet International Newsgate

> naw, just the last model :-)

~~I would like to count the clones kinda in the line too. Like the Milan
040/060.

And to me, the CT060 is a whole new level of the Atari ST realm. There are
Falcons, and then there are Falcon 060's. :)

It's funny afterwards reading those lines: they gave us the CD drive when the world simply wouldn't want it... and more. And when we wanted it, they were too late getting it out time and time again. I said it before and I say it again: Atari died because of their own stoopid logistics.

Louis

    Is it possible for you to send me the file? How large is it?
    Sure, I can make an update to correct the bug.

    Guillaume.

Hi!

Just out of curiosity: How do you implement the solver? I know that one can map the problem to an ILP problem. Do you do this or do you just perform all the things that a human does by hand iteratively?

Matthias

    I don't know what ILP problem is, sorry, I'm not english... and never
made comiter studies.
```

The solver has two levels:

- the first one is close to the human behaviour: eliminating wrong cases by row, column or bloc, and finding pairs to reduce the possible cases.
- if this fails, the solver makes a "guess" on one unsolved position and tries to solve this new puzzle: if the puzzle appears to be impossible, then the guess was wrong and this eliminates a possibility.

This is done recursively and works very well. I solved a puzzle named "the hardest sudoku in the world"... Don't know if one should believe it, but it's true that my solver had to make several levels of guesses before solving it.

Guillaume.

Seeing that Didier is working on an ATI Radeon driver for the CT-PCI project I went and bought one to try it in the Milan.

http://perso.orange.fr/didierm/ct60/ctpci-e.htm

Sadly it doesn't boot. Presumably the code that bootstraps the card doesn't work. The Milan seems to boot, based on the disc activity that I can see.

Is it the bootblock code that starts the gfx card ?

Peter

You can just simulate the mouse through the joystick port if you don't
need the keyboard simulation.  Otherwise, for the keyboard simulation
on the Atari ST, it connects to the 8-pin connector where the keyboard
goes on the 1040ST.  Joystick port is the DB9 connector.  There are no
drivers required so the joystick/mouse simulation works with all
applications.

See http://www.krishnasoft.com/sps.htm for more information.  Thanks
for your question.

Writing a solver apparently is much more fun than do the solving.
:-)

I remember Rubiks cube.
I only bought one when I discovered that they could easily
be taken apart and reassembled.

I never got the patience to actually solve one.

Hi Frank,

FPS>I think it is phantastic that he is still supporting the ATARI and we
FPS>can install current hardware into a computer that is more than 10
FPS>years old.
10 years? This year I'm going to celebrate my ST's 20th anniversary I
bought with Blitter TOS (1.2) in September '87...

No question that the machine still does work... :-))

Und TTsch�

I've just received these Atari Games from an Atari Dealers Warehouse! I've made some adjustments. Some facts were wrong. For instance, Lords of Conflict is Lords of Conquest. Starflight is Starlight and Summer Games is for the 8 bit, not ST. And Ultima II by Sierra is sold.Titles listed below for 8 Bit & ST & available!E-Mail Atari@aracnet.com or call (503)256-9974!

Prices below are for one copy each.

8 bit titles

atari logo; atari, complete in thick silver box $20
decision in the desert; micropose $20
kennedy approach; micropose $20
napolean in russia; datasoft $20
summer games; epyx $20

st titles

auto duel; origin $50
axe of rage; epyx $20
data manager st; time works $20
design ideas; time works $20
down hill challenge; broderbund $20
fleet sreet publishing v.2.0; michtron $20
the fools errand; miles/electronic arts $20
frostbyte; starsoft $20
golden path; firebird $20
gridiron!; bethesda softworks $20
lords of conquest; electronic arts $20
manhunter 2-san francisco; sierra $30
midway battles; tdc $20
no excuses; arcana $20
olympus; olympian software $20
operation: clean streets; broderbund $20
people places & things; time works $20
phantasm; exocet $20
santa paravia and fiumaccio; starsoft $20
the sorcerer of claymorgue castle; keypunch $20
space quest-chapter I-the sarien encounter; sierra $30
starlight; tdi $20
stock market "the game"; starsoft $20
symbols & slogans; time works $20
tank attack; artworx $20
targhan; silmarils $20
zynaps; hewson $20

Atari Video Club will be holding thier meeting at the Westchester
Public Library in Westchester,IL on 3-18-07 at 2:30pm.
the meeting will be two hours long.
the first hour of the meeting will be a meet and greet,where
I will introduce myself and get to know you.
we will also be discussing the following:

Club matters: future meeting dates, newsletter ideas,meeting ideas

ideas for future club outings: amusement park,flea markets,amusement places

trade show or swap meet ideas VGS or smaller show

The second half of the meeting will be used for trading and possible
demoing some items.
(please Do not bring stuff for selling,since it's at a library and I
told them no money will be collected I don't to get in trouble)
on the subject of bring stuff to demo please let me know first this
way I can set you up(space is limited)
We should be out of there by 4:30pm
the location of the library is:
10700 Canterbury Street, Westchester, Illinois 60154

I should be there around 2pm to set up and unlike the first time I did
this
I will greet you at the door of the library and direct you.
(incase I get off work at 1:45pm I'll bether around 2:15pm)
here is the url to library :http://www.westchesterpl.org/index.htm
E-mail me if you plan on coming.

Dan Iacovelli

Just a quick note to let you all know that I'm selling my DaynaPORT SCSI
/ Link-T Adapter. I've got it on EBay if anyone is interested (Item
number: 330086334039). Using the Anodyne drivers this adapter will give
you the ability to network (using ethernet) your TT, Falcon, ST or Mega.

Thanks,

Bob

Hi James!

> I know this has been a touchy subject in the past but as no one is
> answering emails to get paswords for this archive, what can i do to
> get into the archive?

Robert Schaffner has taken it all offline and will give no longer support for it. Not sure anymore why it happened, I think it was because someone asked for the key or even the archive (to bypass the password) in a newsgroup or something. Robert didn't like this and (now my very personal opinion) behaved like a little child about it and took it all offline.

So there you go, I'd say no chance to get it, unless you find someone who has DOITF030 on the harddisc and is willing to send it to you. If that's ok with you that is up to you.

Cheers, Ingo =;->

I found it on http://ftp.funet.fi/pub/atari/falcon/doc/, and the
archives there don't seem to need any passwords. At least I could
extract the DOITF030.LZH fine using winrar on windows xp.

This looks like a really outdated version to me. Look at the date. As
far as I know, Mr. Schaffner always updated the archives right up to the
point when they went offline.

But maybe this archive already is what the OP was looking for, even
though it is that old. And God knows about the legal status of that one.

My guess is that this is an authorized version of the archive because if
it was not, the author most likely would have had this one removed from
the server.

But as I was saying, that's just me guessing.

Cheers, Ingo =;->

Yes it's a very very old one IIRC. Even the one I have is a couple of
years old now (7.3.0).

Coda.

I can't blame Robert he acted this way. Robert has put lots of free time
to get DOITF030 as updated as possible. As far as I know Robert didn't ask
money for the archive. All he wanted was people sended him a kind
mail to ask the key. But it seems this was even too much trouble so ...
If I was in his place I would have done the same.

TTFN,
Martin

Hi Martin!

> If I was in his place I would have done the same.

I don't know if you would...
Have you followed this topic back then? How it happened? What exactly happened? My mail was far too simple to describe the actual circumstances.

Unfortunately I haven't seen the offending thread in this forum back then, because the thread got entirely deleted. However, it should be possible to fairly well reconstruct what had happened from another thread in which the shutdown of the forum was announced and users wanted to know why:

Some Falcon user did in fact try to obtain a key from the doit author but didn't get it for reasons that I can only speculate about (commercial use of his Falcons).
Obviously he then tried to contact the author directly, but with no success. That's when he chose to ask in the forum.

Now I don't know if he got a key there or solutions how to get around it, but it seems like he didn't (at least I guess this from one sentence the forum master wrote: "...no punishable act has been committed in the forum..."). Some other user then suggested that the doit site "may be deficient or may no longer be active and just be another dead corpse in the big wide www".

At that point the doit author himself must have written something about his site not being dead. Unfortunately he must have done this in quite an inacceptable and rude manner.

At the same time the doit author also wrote to the forum master directly, threatening with some kind of law suit and wanting the IP addresses of one/some users.

So the entire offending thread got deleted and the forum master also wanted to shut down the whole forum. He could not understand, why this situation could not have been rectified between the two involved persons, especially when you consider that he got contacted very promptly and with a threat, but no such contact has been tried with the "offending" user.

Soon after that, all the Atari related stuff of the doit author disappeared from the net.

Ok, I think this is a rather complete account of what had happened back then. So it wasn't quite as simple as just "asking for a password in a public forum". It was a bit more complex than that.

By no means did I want to encourage to ask for passwords or cracks or justify such behaviour! Of course I do respect the work of anyone, particularly spare time projects. But if a situation like the above does happen, it is also a matter of how to deal with it...

Hopefully it's a bit clearer now why I wrote what I wrote.

If you happen to speak German you can read the whole discussion thread here:
http://f6.parsimony.net/forum6332/
But the forum is now finally closed (due to other reasons), so you will only find a zipped archive there.

Cheers, Ingo =;->

Ok, well i can give him lots of kisses and any loving he needs but quite frankly i'm sure other people have cracked the archive with freely available zip crackers and kept quiet. Just seems a shame that the DOIT website is now geared towards Macs. Why not charge a few dollars/pounds/euros via paypal for access to the archive, i'd pay!

Is he Sinclap in disguise (remember him!)

Please note that this is a friendly request so i don't want to see any legal threats or solicitor letters through the post... :)

Any (nice) suggestions?

FamilyNet International Newsgate

So you had this working. Please let me know exactly what software you used to get it going.

I have managed to get one JUST like it to work to the point that it can send packets (ping) successfully. No luck getting it to work with Cab 2.7.

Doc Clu

To be honest, no. Way back, I think somewhere in 2000, I did ask for the key for doitf030 v 6.8 and got it right away.

>
> Some Falcon user did in fact try to obtain a key from the doit author but didn't get it for reasons that I can only speculate about (commercial use of his Falcons).
> Obviously he then tried to contact the author directly, but with no success. That's when he chose to ask in the forum.

......

.....

...

>
> Ok, I think this is a rather complete account of what had happened back then. So it wasn't quite as simple as just "asking for a password in a public forum". It was a bit more complex than that.

Ok thanks for clarifying the situation. It was my believe it was just a matter of asking a key.

>
> By no means did I want to encourage to ask for passwords or cracks or justify such behaviour! Of course I do respect the work of anyone, particularly spare time projects. But if a situation like the above does happen, it is also a matter of how to deal with it...

Of course

> If you happen to speak German you can read the whole discussion thread here: http://f6.parsimony.net/forum6332/ But the forum is now finally closed (due to other reasons), so you will only find a zipped archive there.

I can read German enough to get a picture.

TTFN,

Martin

Hi Martin!

> To be honest, no. Way back, I think somewhere in 2000, I did ask for the
> key for doitf030 v 6.8 and got it right away.

I also got mine right away. But some people don't and also don't seem to get a reason as of why. Then I do not find it too surprising that they ask about it in a forum...

> I can read German enough to get a picture.

Ok, just a hint to save you lots of time:
Create a new folder, let's call it "Forum". In it, copy x.zip and unzip. Then create a folder "Forum/messages" and unzip the other 2 zip files in it. And don't do this on a windows machine. It's about 15000 single files! Even on fast machines it's going to be horribly slow.

Then open index.htm and the thread is right on the first page almost on the bottom.

Enjoy ;)

Cheers, Ingo =;->

I wouldn't know. If the password is long enough, cracking will be tedious.

> Why not charge a few dollars/pounds/euros via paypal for access
> to the archive, i'd pay!

I have no idea! But quite an interesting read that I found today:

Hello,

I recently bought a Matrix VME card on ebay.
It has "Matrix M128" and "Monograph" written on it.
Unfortunately, it came unboxed, with no manual, and 4 disks that
are labelled as follows :
1- MatScreen Farb-Treiber V1.0 (06.07.90) f�r C32 und C110/128
2- MatGraph M128 SystemDiskette V1.3 Datum: 1.08.92
3- MatGraph MatScreen Systemdiskette V2.0 28.03.91
4- MatGraph MatScreen Systemdiskette V2.1 datum: 04.06.91
Browsing the net, I could find a site which explains how to install
a TC1208DR (what's this?), but as I'm not sure whether my card is
compatible or not, I'm asking here for help - hoping someone will
be able to drive me through this :-/

Regards,

J.-Luc

I got the key for 2 versions of DOIT long ago.
As far as I remember, Mr. Schaffner used an automated process that used
informations the user was to give.
AFAIR again, the way things were explained wasn't that obvious for who
didn't read them thoroughly - or, say it's the way I felt this, and I
remember I thought something like (in french, of course!) :
"Oh! God! one must be very careful when giving the info! One single little
typo, and bye-bye the key!"

Greg,

It's been several years since I had the DaynaPort hooked up to my TT. I
now use an EtherNEC card that I purchased directly from Lyndon Amsdon
about 2 1/2 years ago. All my STING settings are now set up for that
interface although I remember not having to change much (except the
drivers) when I switched over. The only software I'm aware of that
works with the DaynaPort are the drivers from Anodyne Software and STING.

Sorry I can't be of more help.

Bob

I had one of those, but sold it years ago. IIRC this card won't work with
a VGA-monitor, you need a monitor that can handle ECL signals. I didn't
have one so I couldn't test this card. Pretty useless on a TT though,
considering the TT's high resolution mono-mode.

Greetings everyone!

Here are the lucky and the proud winner(s) of the January prize(s) at The

DarkForce! BBS:

January 2007
1. ST Magazine - Teklord wins the free 3 mag. subscription

2. Mega STe motherboard- Guitarman61 wins it!

Congratulations to our winner(s)!

Also, here is Februarys prize:

February 2007
1. ST Magazine - some lucky Atari caller will win a free 3 magazine subscription.

2. We just had the SuperBowl here in the US, so lets play football!
   AFL Football that is! The winner of AFL Football this month will
   pocket a $25.00 cash prize. (please read the docs fully, you must
   play to win).

Congratulations to our winners, and good luck to this months callers!

 :)

Funny, after all those years I don't think I can shut this site
down....
But Jo Even is right, this card is for ECL monitors. The TC1208 is for
VGA ones and produces max 624x832 in 24 bit resolution if I recollect
right (it's been quite a while since I last fired up my TT).

Falcon memory upgrades do not fit into any 1040!
If it is an STE, you can use standard memory of its time and those are
still available on Ebay.
If it is an STF or STFM you run out of luck. You will need soldering and
some hacking of the MMU connections to fit an upgrade to 4MB.
A single RAM chip of 4MB wouldn't help either, you would need to build
an entire access logic to make the ST able to access it.

HTH,
Matthias

Hello,

Well, so that means I bought a totally useless card :-(
I thank you all for your help.

Regards,

J.-Luc

Thanks Lonny - but that's the page I was speaking about ;-)
Now, I know :
1- this card only works with ECL monitors,
2- should I own such a monitor, this card would be useless on my TT since
   it has better native hi-res mode than the card can offer,
3- I've been had - and... ouch! it hurts! :-(

Regards,

J.-Luc

Hi all,

The series of interviews with people that have been playing a major part in the work with FreeMiNT and its components continues. This time the spotlight is put on the XaAES maintainer Odd Skancke, also known as "Ozk".

Please visit the XaAES website to read the full interview:

http://xaaes.atariforge.net

I seem to remember from past discussions that the LAN port of the Mega
STe is indeed compatible with Appletalk networks. Is it suitable for
use with modern Macs somehow?

I don't really care about getting the MegaSTe online, but I would be
delighted if I could be able to transfer files between it and my
Powerbook G4 so I can eliminate floppy disks, CD-Rs etc.
Can this be done without any additional (expensive and elaborate)
hardware?

Hallvard

A sensible name convention for modern operating systems
would be the names of palaces:

Louvres
Fontainebleau
Versailles
...
Hermitage

The order reflects the increasing need for royal households
through history.
They also all accomodate only 1 king.

Hi,

The software "Eureka 2.12" is updated on its WEB page. It is a
"2D Graph Describer and 3D Modeller". You will fetch it from :

<http://eureka.atari.org/eurka702.zip>
That is the Complete Common Edition
<http://eureka.atari.org/eurka020.zip>
Is the Complete 68020 Edition
<http://eureka.atari.org/eurkafpu.zip>
Is the Limited FPU Edition
<http://eureka.atari.org/eurklite.zip>
Is the Lite Edition, working on early ST with 720kb floppy
<http://eureka.atari.org/lib_dgem.zip>
Are Dynamic Libraries Extensions for Eureka
<http://eureka.atari.org/tiny045.zip>
Is the OpenGL Extension (requires previous package)

This publication corresponds to 20th anniversary of its
starting developments, that began at first months of 1987.

I wish you big fun with this new STuff !

Best ATARIans regards,

-- Fran=E7ois LE COAT

Limit of 120GB was a little bit annoying but 2TB should be fine for
quite some time... :D

any way how you manage to fill even e.g. 120GB harddisc on Atari? All
games and programs for Atari ST and F030 will took only 10% of that
space; do you have 100GB of MP3? :) just joking :)

Working with the VidiST12, I rewrote the driver to capture videos in 16 grey levels. But, as the capture is really time-consuming, I can't perform a "direct to disk", so I need a lot of RAM to store the images.

With 64Mb, close to 3'30" in 320x240x16 and 14'00" in 160x120x16. It's not a lot...

With one TB-RAM... a whole film?

The other limitation is that I capture the sound of the video with a Mega STE (serial link with the TT for synchro) and it only has 4Mb. But there, sure, I could write a direct to disk capture program.

Guillaume.

No. Maximum is 16MB on 68000 and 4GB on 68030 and better CPUs.

But the main question is why not? W2k server is eg via PAE extension
also able to handle more than 4 GB-RAM...

Now you know a second one from Germany. :-)

I once had a 160GB IDE drive for my falcon which I had to give back due to the fact that at that time HDDriver couldn't manage such big hard disks but I do not blame Uwe for that just the other way round :-) I think it is phantastic that he is still supporting the ATARI and we can install current hardware into a computer that is more than 10 years old.

Regards,

Frank

> space; do you have 100GB of MP3? :) just joking :)

Not only that. :-)

I once converted all my CDs into MP3 (and used my Falcon for that) and
now consider to store the content of these CDs as .wav-files on the
falcon so I don't get any quality loss (except the fact that the DA
converters in the falcon are not the best ones).

I agree 100% :-). Also, although it was only a test, I've had a 160GB
hard drive successfully installed on my TT (with a SCSI-IDE converter).
But I only used one 12 GB partition on it to test multi-DVD support in
my software. I *don't* recommend FAT32 for partitions that big, it's
way too slow (as Uwe says in the HDDRIVER manual).

It is specific to intel/amd CPUs. Yep, you could add some hardware
extension, maybe bank switching like on XL/XE, but it will not work well
in multitasking environment.

This years JagFest UK will be held at the Medway Manor Hotel, Rochester,
Kent, England on the 30th June & 1st July
For the full weekend experiance arrival and setting up will start late
afternoon and evening the day before (29th June) as usual.

Come and see Jaguars, VCSs, STs, TTs Falcons, Hades, Milans and more
including an appeareance by one of only two working Jaguar Virtaul Reality
headsets.

Keep an eye on http://www.jagfest.org/uk/JFK2007/index.shtml for updates on
who and what will be in attendence.

Stephen Moss

I take it that Nick has confirmed the venue then? The main site
suggests it isn't yet.

When I tested the latest version of HDDRIVER I created a FAT32 partition
with a size of 380 GB. Partitioning took so long that I thought
something was wrong with HDDRIVER. But there was no problem with the
driver, it simply took several minutes to create the FAT32 partition.
Eventually writing actual data to the partition (with MagiC) was no
problem as far as speed was concerned.

Uwe,
I think I missed the bit about how to get the upgrade. Can you re-post?

After paying the upgrade fee registered users get the new version by e-mail. Please have a look at the upgrade information on http://www.seimet.de/hddriverprices_english.html.

Hi;

Can somebody point to a FONT-protocol client program that actually uses font colour and effects (bold, italic...) data obtained from the system-wide fontselector? It seems that the few FONT-protocl clients that I have only use font identification and size.

Thanx in advance;

cu;

Hi,

Where are the following sites disappeared ?

<http://atariarea.histeria.pl/>
<http://www.gemcandy.org/>
<http://atari.transaction.free.fr/>
<http://www.atari-forum.com/>
<ftp://chapelie.rma.ac.be/atari/>
<http://baldrick.gemcandy.org/mpcstik.htm>
<http://atari.transaction.free.fr/interactive/>

It was linked from <http://eureka.atari.org/atari.html>
Any clue is welcome.

Best regards,

Gemcandy is down due to issues with the registrar. They STILL haven't
fixed Sparemint.org either, waiting since the end of December.

You could always try another Atari Forum.. www.atariforums.com

I'm trying to show to Rodolphe or whoever what interest there is should someone be interested in making a CT60 (or whatever) processor upgrade for the TT030.

And that brings the list up to about 15 so far. Need to check the other areas I posted this to and add them to the AtariAge list.

Keep posting your interest here and I'll keep checking in & adding it to the list.

Thanks all,

Ok, Checked all locations & I've added all the responses before this one to the master list on AtariAge. We are up to about 23 so far. Please keep listing the interest here.

I've mentioned this list on here, AtariAge, Atari.org, Jaguar Sector II, and the ST Fidonet. Please, if you know of other areas, mention it there, and post any interest HERE and I will relay. Thanks!

stguild-bbs.dyndns.org => 72.196.129.149 seems like it's down. Maybe
the dns needs updating?

Yes, the venue is now confirmed. I said I would announce here and at AA and hoped someone else would do the JagFest forums, if your refereing to the link above I am sure it will be updated in due course, and as more information comes in. I beleive that Gaztee done the posted image, as he is in Canada at the moment he is probably unable to update it right now. Apparently the owners have done a lot of work improving the accomodation and so it the rooms are going to be about �5 more per person per night than before.

Stephen

Great to hear that they did some work on that dump. One of us will
still have to put up with Nick's snoring though ;-) I'm sure that's
worth another fiver... :p

Chapelie is down due to the uncooperativeness of the present Sysadmin,
according to Martin's reply to my similar question of a month ago.

Hopefully, when this person's 6-month tenure is up, something might change.

Hello,

I'm looking for a possibility of plugging several cartrigdes at once.
With a manual switch it would be ok. With a programmable one, sure, it would
be better!

Guillaume.

I know that an IDE channel by default can only have two devices
connected to it but can the falcon have 2 ide drives internally with
just a 2.5 ide cable with three connections?

Or as usual there is much more to it.

I know this is possible in the amiga but I have a spare 2.5 inch ide
drive with a cable ready to connect???

What exactly does *three* connections mean? Fact is that you can connect two IDE/ATAPI drives to the Falcon, as long as you ensure that the cable is not too long. And, of course, one drive must be jumpered as master, the other as slave.

```

As Uwe says, it's quite straightforward, just use a short cable and don't forget to configure one drive as master & one as slave. The main issue is probably finding space within a standard Falcon's case. Of course if you've recased it this would presumably not be an issue.

Roger

Modern 2.5 inch drives are quite slim compared to the 65 meg disks the
Falcon came with. I would reckon it would not be too hard to modify the
cradle to take 2 drives.

I've got 2 IDE devices on mine - one is an 80 gig Maxtor hard drive, and
the other is a Lite-On DVD burner... :)

Hi all

Coda schrieb:
> stguild-bbs.dyndns.org => 72.196.129.149 seems like it's down. Maybe
```

> the dns needs updating?

```
<=== Cut here ===>
[ragnar@odin ~]$ telnet stguild-bbs.dydns.org
Trying 66.116.125.49...
telnet: connect to address 66.116.125.49: Connection refused
telnet: Unable to connect to remote host: Connection refused
<=== And cut here too ===>
```

For me, it does not look like a dns problem. I think a firewall is blocking incomming traffic.

Bye
Bernd

```

Thanks all, I will try it when I next have the courage to rip open my Falcon again.

The only problem it seems was getting hold of a 2.5 Inch IDE lead that enabled 2 hard drives to be connected at once, hence why i said "3 connectors". Standard 2.5 inch Laptop IDE cables are plentiful but only for one device. I had to get the cable from an Amiga firm.........argh :)

cheers

Hi Michael!

Do you mean a Fast-RAM card for the 060-CPU, or a Fast-RAM for the CT060 and a FAST-RAM card for the original TT030 Atari?

I would like to play around with 'X-Audio for accelerated Atari's'.
It's a Sample Editor program.

My 2/4MB TT is nice, but 4MB is not much for sample-editing.
Well, I could exchange the 4x1MB to 4x4MB, for a total of 16MB
Fast-RAM, but as far I saw now, is the RAM Card I have, not the fastest
and I remember good the times of my AMIGA, where 15MB/sec or 20MB/sec
Fast-RAM speed, made exactly that difference you felt, when using the
machine. Approximately a quarter faster then.

I think the 32MHz 030 can make good use of X-Audio, greater/faster apps
I do not need.
I have as well a 1GHz P3 which makes the greater tasks,
e.g. TIFF pictures (<200MB), Multitasking NT for Internet Computing etc.
So, no need for a 060 :)

For my first instance app on the ATARI, a ST 8/16MHz with Blitter would
fit as well.
But the feeling in Cubase 3.x, with a TT and NVDI on, is absolutely
PRO, IMHO. (CUE and REWIND for example)
MIDI Timing seems also to be similar to a ST (backslowing.... PC is
stumbling forward), but I have to check it one time, with a std.
1040STf.

Kind Regards,

Daniel Mandic

Do you want to start XaAES from the console instead? Don't get the question, really. There is an option for this in EasyMiNT afaik.

regards

I think EPSS works on the STE/MSTE/TT. It plays 8-bit samples and installs as a MIDI interface in Cubase iirc.

... or buy something for 50eur on ebay and get half-decent results.

Daniel, the CT60 has its own FastRAM. The memory bandwidth is insane
(100Mhz bus, 100Mhz CPU). Once you get used to that speed, you'll never
want to go back to the 030. Trust me.

Generally, the CT60 is very compatible, even with badly written stuff
such as Cubase.

I don't really care how it is solved. The point is that one must login
before use the desktop.

Yes. This setup allows me total flexibility, as to how I want my Falcon to bootup. I don't have to open the case, I don't have to reach around behind the machine to switch anything, etc,...

> P.S.: What's about the MIDI compatibility, going with CT060 and TT!?

I'm afraid I'm not a big MIDI user so someone else with more expertise will have to answer this question. It's my general understanding though, that MIDI software gets along with the CT60 very well.

That's OK - that's the UNIX-way of invisibility...

Well, I guess one could alter the startup stuff in MINT.CNF, but I've
had it like that since I installed easymint.
However, since XaAES loads kernel modules it needs root access, which
means you'll have to use something like Sudo to start it (works for me)

And as a result nobody can find the dev subdomain :-P It's ok though, I
haven't had any time recently to work on it.

Thanks,
Mark

Sudo is a console application, I don't know if it's included in a
typical easymint distribution, but it should be.

I enabled the 'login' option in easymint during installation. Don't
know how to change that later on, probably trivial for someone who
knows how, but I don't, sorry.

Somebody help me, please!. I'm installing MiNT by hand (I want to know
how my system works, what to change if anything is wrong).
Is there a detailed MiNT documentation similar to the ones that
available for different Linux distributions? What is the closest Linux
distribution to MiNT?

Hi Daniel,

> Do you mean a Fast-RAM card for the 060-CPU, or a Fast-RAM for the
> CT060 and a FAST-RAM card for the original TT030 Atari?

We had first to check our spare parts and look, how much motherboards are
ok. But maybe we have not enough  Fast-RAM for the original TT030.

Maybe we have also not enough daughterboards with 68030 CPU. So if
someone will build a 68060 daughterboard, a Fast-RAM card for the 060
card is also a good idea. If someone build a 060 card and i decide to buy one, i
think i would also like to by a Fast-RAM because i am afraid i have no spare
Fast-RAM, but enough free motherboards for the 060 card. So i would like
to use some of the incomplete TTs for such a upgrade.

Best regards,
Michael Bernstein

Hi Michael!

Obviously I have spent too much time with AMIGA Turbocards, because I am totally confused now :-)

You mean the CT060 can run on the TT Motherboard, without changing/removing the TT FAST-RAM Card?
But, can a CT060 run with its own Memory (TT FAST-RAM Card not plugged in, on the TT Board), just a Sidecar on the CT060 Board with RAM, SDRAM...?

AMIGA could do so (using old RAM with higher CPU's), but with restrictions to MHz (~8MHz) speed, and 16bit (24bit addressing) wide, of course.
Well, the TT Fast-RAM is at least 16MHz and 32bit, but with a CT060 inside, it would stay at 16MHz, so far I understand.

By the way, even the 32bit AMIGA's (3000, 4000), had their own 32bit RAM on various Turbocards. The std. onboard RAM was usable as well, slower though, but addressable and already 32bit wide (A2000 was 16bit wide, my favourite AMIGA). Even 16bit Cards (Zorro-II Cards), e.g. Memory Cards, are addressed rightly.
Then (when having such an exotic environment), every RAM gets an Priority. Fastest RAM (local RAM on the Turbocard) the lowest (-5, or so for the Sideboard-RAM, 0 for the onboard 32bit RAM, +5 for the 16bit RAM on various Z2 cards and +10 priority for the Chip-RAM :-) etc etc.)

Can you point me please to a web-site eventually, where the CT060 and other TT specific questions are clearing up a bit for me?

Best Regards,

Daniel Mandic

Imagine this

Images, video, mp3 music, the real news from around the world... it's all inside waiting for you.
You can find almost anything you are looking for.
They offer some of the best premium newsgroup access anywhere.
They give you access to some of the best groups others may not carry.
One thing I love about them, they don't keep log files of the news I read or files I download.
With some of the fastest connections around it's no wonder people love it and keep coming back.
Great prices and support await you as you travel into the beautiful world of premium nntp access.
Take a look, I know you'll love it as much as I do.
Take a look at all the great features below and imagine! You'll LOVE it.

Blazing fast downloads
Very long retention
Convenient thumbnail indexes
800 GIGS of new multimedia content each day
2,000,000 new posts each day
Posting allowed!

Just go to newsdude.net - they're amazing.

Hi Daniel,

> Obviously I have spent too much time with AMIGA Turbocards, because I
> am totally confused now :-)
```

Or i have some confusing ideas. I have np knowledge about the CT0060 and i am working as a software engineer but not as a hardware engineer.

> You mean the CT060 can run on the TT Motherboard, without
> changing/removing the TT FAST-RAM Card?

I expect, that a CT060 for a TT will also run without changing/removing the TT FAST-RAM Card. Any CPU card put in the socket for the daughterr board shouldbe able to access all parts on the mainboard. So i see no reason why not access TT FAST-RAM. As far as i remember, the mainboard is made for 16 MHz and the daughterboard with th 030 CPU acts like a 32 MHz hardware accelerator similar to some 16 MHz cards for old STs,

> But, can a CT060 run with its own Memory (TT FAST-RAM Card not plugged
> in, on the TT Board), just a Sidecar on the CT060 Board with RAM,
> SDRAM...?

Has the CT060 a socket for fast RAM? Because i have no Falcon, i did not took some closer look to the CT060.

> Can you point me please to a web-site eventually, where the CT060 and
> other TT specific questions are clearing up a bit for me?

I have no links to informations about CT060 or TT. Maybe someone else have some useful hints.

Best Regards
Michael Bernstein

Hi David,

> I might be up for one of these, depending on cost...

One of the TTs with 030 CPU if we can set up enough? I try to remember your interest if we have some assemled. One of the problems is ny friend which has most of the spare parts, but less time than ideas what to do with his free time. There are Atari, german MausNet, Citroen, ... We have the parts a few years, but nothing happend from him. After problems with set up a PAK (Atari hardware guru Michael Ruge give up), i took a closer look at this parts. He has promised he has next month a little bit time left to start with some boards.

Best regards
Michael Bernstein

How about http://www.czuba-tech.com/ -> the CT60 creator's web site. From there, I believe there are other links to CT60-related web sites, in addition to lots of info on the site itself.

Here's the info as best I can remember:

68060 anywhere from 50 to ~100MHz, depending on revision of CPU you can get.

Variable clock rate by either swapping out clock chip or using CTCM module.

Also, yes, the CT60 has its own fast-RAM slot. It takes 100/133MHz SDRAM.

25MHz bus accelerator (for Falcon - no idea about TT, and only on CT60, not CT63).

Replaces Atari power supply, power and reset switches, power and HD lights, etc. with PC-compatible versions.

TOS 4.04 and CT60 BIOS in updatable FlashRAM, which gets copied into SDRAM at bootup for maximum speed.

A new card slot for addons (i.e. SuperVidel graphics card, EtherNAT networking and USB card, etc.)

Can be turned off by connecting a switch for 100% backwards compatibility.

I think that's about it. Anyway, I'm not sure how much of this would be usable on a TT, should R. Czuba make a TT version or adapter for the existing one. But it is a very nice addition for my Falcon! I can't imagine going back! The only thing that would make it better would be a SuperVidel graphics card and EtherNAT networking/USB card!

Hope that helps!

In the current CT60 design, the TT-ram would conflict with the FASTram on the CT60 since it's mapped to the same location. Also, wouldn't the TT-ram be quite pointless anyway, since it's so much slower? Also, TOS can't distinguish between "fast" FASTram (on the CT60) and "slow" FASTram (TT-ram), which would complicate things further. Perhaps there could be a point having a small amount of TT-ram for SCSI (not sure, but afaik the SCSI interface in the TT can use TT-ram, unlike the other peripherals?), but certantly not for software applications?

Hi PeP!

I understand. It increases compatibility on software, which actually runs on TT030 and its 32bit environment.

> TT-ram be quite pointless anyway, since it's so much slower? Also, TOS
> can't distinguish between "fast" FASTram (on the CT60) and "slow"

Hmmm, I remember timing problems with an A4000 Turbocard. Sideboard with 40MHz RAM speed for a 040/40, had timing incompatibilities with the onboard (25MHz) IDE-Controller.
When disabling the fast FAST RAM and running
assynchron 40 to 25MHz onboard AMIGA 32bit-RAM, every thing ran o.k.

I hope this case will be developed as good as possible and I am going to buy/invest into a CT060 for the TT030. OR!, a SCSI (Fast-SCSI-II) Host on the CT060, like on my last 'Blizzard 2060' Turbocard (the 100% solution for reliable SCSI operation, IMHO). IDE would be O.K as well and maybe the better choice, due to unavailability of HD's, normal HD's ;-). Not 15000UPM and such. Too expensive etc. (Compact Flash!? etc etc.)

I remember good the A2000 060 Card I have had. It was more compatible than other 040 cards and some worsened designed 030 Turbocards. Only beaten by the mighty Commodore 'A2630', for the A2000 series. The 'A2630' could be turned off an on, just holding "left Shift", or so..... which was seldom the case ;-), I think.

Some testing with MIDI Stuff and CT060, I would appreciate to hear
about....

Hi Michael!

The Link to Czuba Tech opened up my thoughts. Very good work, what I can see in the first sights. 060 BUS Slot... and decent :) Fast-RAM Speed.

By the way, do you own a CT60, or do you also looking to order one, one for the TT?

Best Regards,

Daniel Mandic

Nope.

> Should one examine whether 'execute' rights exist?)

That is exactly what other desktops do. In Thing you can disable
this in case you don't need it (it takes some time to introspect all
files in larger folders).

Even cooler feature would be to run the unix utility called 'file' to
get either MIME type or the textual file type description and be
able to map apps based on some regular expression. But that
is probably not a feature to the minimal desktop Teradesk
currently is.

Best Regards

STanda

There is a new version of HDDRIVER available, with the most prominent
change the support of IDE drives with a capacity of up to 2048 GByte
(LBA-48). (Up to now only 128 GByte were supported.) For SCSI drives
there is no change, i.e. drives up to 8192 GByte are supported.

A list of changes in the latest version 8.2 and a new demo version is
available on http://www.seimet.de/hddriver_english.html.

> about 25 that would be willing to buy this upgrade. And so he turned
> his attention to the Falcon.

Are you sure Rodolphe asked for such a list? Can you tell where did you
read this information, please? (maybe on newsgroups?)

Here is what I found on fr.comp.sys.atari, and it concerned the CTLink,
not a CT060 for TT :

=====

The CTlink project was started a long time ago now...
After several months thinking I will finish the design (stills only the
CPLD
to code and the PCB routing around this CPLD), I realized three thru
things

:
1 - The power of MSTE, TT & standard F030 is too low to allow to really
use
Ethernet 100Mbits... Even 10Mbits and USB (12Mbits) will dramatically
decrease the performance of these machines.
2 - Pre-orders are only 16 cards for MSTE, 25 for TT and 61 for F030. For
the first 41, a second card is needed to adapt to VME. 41 is not enough
to
get a good price. And 61 on falcon is not terrible.
3 - I do not find motivation to finish this design (and win a bit money
is
not one).
4 - I need more time for some other projects I consider more important
and
really more motivating (CTPCI & new motherboard).

So, I decided to cancel the CTLink project.
The schematics and notes will be put into a ZIP file and everybody will
be
able to download.
There is no copyrights on this and if one of you want to finish I will be
happy for atari communauty.

=====

Stephane

>

Most of the time when I'm running MiNT unix-like stuff on my ext2 partition, I'm doing this in a TOSWIN2 window, from a bash shell.

If I really want to run it by clicking on an icon in Teradesk, I just make a copy or symbolic link.
For example I have a copy of shutdown (from the sparemint "oldstuff" rpm package) renamed to shutdown.tos that I use to shutdown my MiNT system in ARAnym. This is still the shutdown method that works best for me. But that's another subject.

I see, with IDE drives, you stopped at maximum XHDI can handle (32
bits). Have you considered extending XHDI with new functions to fully
support 48 bit addressing? (that would give us max of 131 072 000 GB :))

Ask me this question again as soon as Atari users want to add drives
larger than 2048 GB to their Atari :-).

>These files are not displayed in teradesk.

This is on purpose, such files are supposed to be invisible in the unix world. However, you can set 'show hidden' in Set mask... dialog and then those files should be visible.

> - It seems to me, that it doesn't follow the links (special type of
>files in MiNT), but I'm not sure it is Teradesk

To what situation are you referring? When 'opening' objects, TeraDesk is supposed to always follow the links. However, in file operations like copy, move, delete... the option to follow the links is set in the copy-confirmation dialog, and is in effect only for the operation currently being executed. A similar option exists when a dialog is opened in order to place a desktop icon.

There is no need for formatting any drive in order to use it for the
Atari. Partitioning is always sufficient. One only has to format a drive
if it has bad sectors.

Nowadays isn't really bad having more than 4 MB. 16 MB is fine. But 32 MB is definitively better. I've 4 MB ST-RAM and 64 MB TT-RAM. Maybe there are some Atari-freaks somewhere out there that really need more but do we really need 1 TB-RAM? I don't think so.

Currently it's really hard to find a new IDE-HD with less than 40 GB and I can imagine that someday it'll be impossible to find one with less than 120 GB but I only know 1 (german) user that really buy a bigger IDE-HD for his Atari.

Hi Adam,

AK>There already are 1TB disks, I think we'll se 4TB this year. I'm
AK>thinking about buing one :-)
my first harddisk was a Megafile 30, my current one is an IBM DCAS
with 4 GB, and I'm pretty sure I will never need a larger drive as
long as working with my TT.

I really do laugh when looking ad the ads for Windows Vista,
especially when regarding the hardware requirements...

So long,

Und TTsch�

This showed to be easy to implement (i.e. to determine whether a file is
executable from 'execute' access rights; actual file headers are not
investigated), at a cost in program size of less than 100 bytes. Any file
with execute rights that does not match anything in 'program types' will
be assumed to be a .TTP executable. If everything proves to work correctly,
the next release of TeraDesk will have this feature. It will not be
switchable, though; making it optional would increase program size and
reduce speed disproportionately to the importance of the issue.

>Even cooler feature would be to run the unix utility called 'file' to
>get either MIME type or the textual file type description and be
>able to map apps based on some regular expression. But that
>is probably not a feature to the minimal desktop Teradesk
>currently is.

While far from being able to handle elaborate regular expressions,
TeraDesk has certain capabilities for specifying name masks (beyond the
simple "*" jokers), that I believe few ever use- or even know of :)
I suppose that some improvement can be made there as well, without
too much trouble.

Aly,

I waited for almost a full year after paying to get my ct63 :)

Which makes me either patient or stupid :) (or both ;)

P.S. I hope I get one of those last PeSTs :)

Hi all,

As the Founder of CPS Electronics I have closed the biz as of 2007. As such
I am selling stuff on Ebay under
http://stores.ebay.co.uk/exxos-surplus-electronics
I keep listing items so check back. Theres a load of stuff not listen yet.
Drop me a line if you like.

As one of the developers for PeST all information is no longer online via
cps-electronics website. Remaining PeST's are currently being sold on Ebay.
I have setup a website http://pest.atari.org/ Which will list sales
distributors and info(when I get around to updating it).

I have setup a new website www.future-technologies.co.uk though at this time
it is unknown what will be placed there. Currently you can view a about me
page at
http://www.future-technologies.co.uk/video/

Other files of interest are slowly being ported over to stos.atari.st
website. Documents such as my 1.44 controller will all vanish of my pipex
account at the end of this month. Currently I do not know where past
projects will be uploaded to. I will imagine such items will be placed on
the new PeST site in the future. I will try and retain as much info and
pages as possible

Thats all for now, happey new year to you all!

Chris

Hi Derryck,

DC>There's a difference between Connect speed, which is dependent on line
DC>quality, and modem to computer transfer speed BTW.
that's it.

And IIRC the transfer speed should be about twice the connect speed,
because of the modem's buffer. And a fast modem waiting for a slow
computer (my TT, too) means waisting time (and therefore, money).

There is a small hardware modification to speed up the ST's (1040,
e.g.) serial port to 38.400 bps (no fallback, problems with fax
possible).

Bye,

Peter

Hello everyone,

I just put up three auctions on ebay which might be of interest to some of you. The auctions are for a minty Mega STE with 4mb of ram and a 40mb harddrive, a copy of Noator v3.1 (with 3.21 disks) complete with a Unitor 2 midi expander, and a beautiful 1040STFM.

All of these items are shipping from Ottawa, Ontario, Canada. I have sold a few other pieces of Atari gear over the last year, and they all went without a hitch. Here are the auctions...

Atari Mega STE 4:
http://cgi.ebay.ca/ws/eBayISAPI.dll?
ViewItem&ih=011&sspagename=STRK%3AMESE%3AIT&viewitem=&item=320071959132&rd=1&rd=1

Notator v3.1 (with v3.2 disks) complete with a Unitor 2 midi expander:
http://cgi.ebay.ca/ws/eBayISAPI.dll?
ViewItem&ih=011&sspagename=STRK%3AMESE%3AIT&viewitem=&item=320071969455&rd=1&rd=1

Atari 1040STFM:
http://cgi.ebay.ca/ws/eBayISAPI.dll?
ViewItem&ih=011&sspagename=STRK%3AMESE%3AIT&viewitem=&item=320071963016&rd=1&rd=1

Thanks for your time!

- Peter

So the TT030 has a home? :)

If not, write me at drclu@swbell.net and maybe we can work something out.

Doc Clu
(Currently trying to get a TT030 up and running for Jaguar development... my goal for this year.)

FamilyNet International Newsgate

Hi all, I'm trying to get a Daynaport on the ethernet as detailed at...

http://www.anodynesoftware.com/ethernet/main.htm

Ok, how EXACTLY doies this work?

I've tinkered with HD Driver 7.6 to 8.1 and only 8.1 even sees it out there on the SCSI bus. Mind you 8.1 is only a demo, and for only $35 I can upgrade to this edition. Not bad.

But what exactly would I accomplish if I did upgrade? There isn't anything that the demo can even hint of doing with the Daynaport.

Do you just format your system with HD Driver 8+... and then hope the STINg drivers they have on the Androdyne site will pick up the Daynaport from there?

Can STing handle PPP, PPPoe, or DHCP connections?

I know there are people on the ethernet using these Daynaports, so please chime in!

>

You need a SCSI adaptor that does SCSI passthru. Link97 or 98 or TT or
Falcon built in.
You need to configure sting to load the Anodyne driver.

> I've tinkered with HD Driver 7.6 to 8.1 and only 8.1 even sees it out
there on
> the SCSI bus. Mind you 8.1 is only a demo, and for only $35 I can upgrade
to
> this edition. Not bad.
>

If you have the 0.71 drivers any version of HD Driver should be O.K.

> But what exactly would I accomplish if I did upgrade? There isn't anything
that
> the demo can even hint of doing with the Daynaport.

Are you trying to boot from a floppy. If so this I have had trouble with
this.

>
> Do you just format your system with HD Driver 8+... and then hope the
STINg
> drivers they have on the Androdyne site will pick up the Daynaport from
there?
>

You should not need to format. Just install the driver. My drivers were
partioned with the Atari utilities
You then need to set up the sting stuff. I seem to recall some of the
entries are case sensitive.
I also seem to recall some settings need to be set via the sting CPX.

> Can STing handle PPP, PPPoe, or DHCP connections?
>

Sting can do PPP over serial. Other wise it only does plain ethernet with
static IP address. Most home routers can cater for this.

> I know there are people on the ethernet using these Daynaports, so please
chime
> in!
>

Yes, but it is a but fiddley to get going, especially if you have not used
Sting before.
I know http://www.dwade.freeserve.co.uk/atari/main.html is about EtherNec
but some of the notes on STING might be helpfull...

Atari PC-1 Computer System. This is Atari's first attempt at the IBM clone market. The IBM clone is in an Atari Mega ST case with a 5 1/4" 360K floppy drive instead of the standard 3 1/2" ST drive. It has an 4.77/8.0 mhz CPU with 512K RAM. Has dip switched Video Adapter for MDA/CGA/EGA graphics. CPU comes with an Atari IBM keyboard, Atari labeled MS/DOS, Atari labeled GEM Operating system, and manuals that are photocopied. Serial Number is #0007 so besides being very rare it's one of the First! Also included is an Atari PCM124 mono MDA/CGA/EGA monitor in the box with paperwork. For both computer and monitor $250.00

Pictures of the unit are on the site listed below.

Classic Computer and Video Game items for Sale/Trade

Hi,

anyone knows how to connect a TT to a PC/Win98 and then to share the
Internet connection I have on the PC ?

(PC and TT are located in the same room and I have a null-modem cable).

Guillaume.

You can set *. mask in Set program types... to stand for TOS-type programs,
if that is what you want.

If you only have to manage few files without extensions, you can also
set each particular filename (complete name), instead of more general
masks with wildcards in Set program types...

Even if you do not assign the filename or filetype as a program type,
you can still run the file as a program by selecting Run in the dialog
that opens when trying to open unassigned file(type)s.

Do you know I can't remember if Win98 supports dial in networking. It
certainly does not support connection sharing. You need something like
Wingate.... If you have broadband get a router and ethernet for the TT.
Either an EtherNec or a Falleron/Anodyne SCSI/Ethernet adaptor....

If you can get broadband...

You could look for a Reibl or PAM VME ethernet card. I have a PAM card
in my TT and it works pretty well with MiNT (I ran my web/mail/ftp
server off it for quite a while).

A better option would be to wait for the NetUSBee cartridge which is
coming out soon (see http://hardware.atari.org). This is backwards
compatible with the EtherNec hardware and as such already has working
drivers for TOS and MiNT (I don't know about MagiC, as I don't have it
and so haven't tried it).

Thanks for all the help. So far I have managed to get the system to load
noticing that the Daynaport is out there at startup, and I am able to ping the

router and it successfully sends the packets, though pinging doesn't seem to work for any other locations. Kinda at a stand still at the moment.

Part of me wonders why I can't ping outside of the router.

Another part wonders if I have STing correctly configured for CAB.

Someday I'll try Highwire when I feel ready to pony up for NVDI 4 and Speedo GDOS. :)

Interesting!   I like the simplicity of it, now what is the projected price?
:)

Thanks. I have a lot of files without extension since I installed MiNT with ext2 partition full of 'unix' stuff. I tried the "*." mask but it didn't work. Maybe I did something wrong. I'll try it again and let you know the result. Selecting the program type in a dialog every time is very boring (0th click: click on the program, 1st clcik: I want to run it, 2nd click: It is a TOS type of application, 3rd click: OK =3D 4 clicks)

Yeah, it's a fantastic little device, and works on anything with a cart
port. You could write Lyndon an email and ask him for ballpark prices
and availability date.

Whats in your route.tab. I can't remember what should be in it for a
Dynaport, something like:-

```
192.168.1.0         255.255.255.0           EtherNet        0.0.0.0
0.0.0.0                 0.0.0.0                     EtherNet
192.168.1.64
```

The Ethernet possibly needs to be something else...

> Another part wonders if I have STing correctly configured for CAB.
>

I don't think there is anytrhing special for CAB....

Hi,
Happy New Year!!!

The UKretro.co.uk January sale starts today and runs until the 31st of
January 2007.

For the duration, Everything in our store is reduced by 20%

Simply add the items you want to your basket and on enter the word
'sale'
in the discount code box on the shipping address page of the checkout.
20% will automatically be discounted from your order.

Best Wishes,
Mike

www.UKretro.co.uk

The Daynaport SCSI/Link (& I think the Fallaron) needs arbitration,
which AFAIK the Mega's adapter doesn't provide :-(. To run the
SCSI/Link off an ACSI port, you need a Link96/97 to provide arbitration,
and something else on the same port to provide termination power to
power the Link96/97 ... not very useful unless you just happen to have
the hardware ...

The following URL will give you some more info:

Hi,

> Do you know I can't remember if Win98 supports dial in networking.

If you use MiNT-Net, you hav e full pppd and can let the PC dial in.

>ethernet for the TT.

This is the best solution and works fine.

Regards
Michael

FamilyNet International Newsgate

What was it, a year or so ago Rodolphe, the creator of the CT60 (the 68060 upgrade board for the Falcon) asked for a list of interested people in getting a 68060 upgrade for the TT030. He asked for 50 users, and got about 25 that would be willing to buy this upgrade.   And so he turned his attention to the Falcon.

I'm a big fan of the TT030 and would love to show that if nothing else, there are 50 TT030 users out there that would love to see this too.

Please, if interested, sign up and tell other friends that have TT030 Atari computers about this list. Know that IF we could convince Rodolphe to make this upgrade that it would take some time to develop, so you have plenty of time to save up for the upgrade if you needed to. :)

Thanks for your time, and spread the word! Let's show that TT030 users are still alive and well out there.

The list...

That is not true (Win98SE), see there:
http://www.annoyances.org/exec/show/ics_98

However, I seem to recall reading that Windows insists on having 192.168.0.1
as IP on the network to make Internet connection sharing work.

Hi Greg!

You can count me in :), but I would rather like to see a fast FAST-RAM
extension (as well...), for 16/32/64 MB or max. 256MB SDRAM (when
possible),
or SIMM Sockets if not other possible.

The speed with the std. TT is good for me.
I guess I will have some troubles when using a 68060. E.g. MIDI Timing,
Cubase, X-Audio (Sample Editor) and other various MIDI Utils, or?

Best Regards,

Daniel Mandic

Hello,

Is there a software out for atari st (something like ACE for falcon) to use the st as an midi expander ?

Regards,
Ingo rose

Daniel, if it is Rodolphe that does one, you can count on high quality
results. He set the CT60 for the Falcon up so that with a flip of a couple
of switches on the front panel of my recased Falcon, (with a reboot) I can
restore it to completely original Falcon 030 mode.

Best single thing that ever happened to my Falcon. :)

I think that in such configuration the "*." indeed will not work- it will be valid only for those names that terminate with a dot ("*." works in single-TOS on FAT filesystem, though).

Maybe something could be done by using the any-character-but... mask, but I am not sure. I will have to think about it (any suggestions for a solution? Is it possible, and wise, in ext2 filesystem to distinguish a program at all by its name only? Should one examine whether 'execute' rights exist?)

I agree.

How about specifying each particular filename in the Program types dialog.
How many is 'a lot of files without extension'?

How about the "*" mask? It covers everything under Linux. Or is that too
general for this situation?

Umm, you just use switches and I ran wires to the front of my case. You
use the jumpers on the CT60 that allow you to disable CT60 mode, as well
as disabling the motherboard mods, reset, etc...

I've got a total of 4 switches on the front of my Wizztronics Rack case:

Power on/off (rocker)
CT60 enable/disable (toggle)
Motherboard mod enable/disable (toggle)
Reset (pushbutton)

A FAST-RAM extension is a good idea and will be a good adendum to a 060 boad. A friend and i have plenty of spare parts for TTs. We hope, not all dead. But very few FAST-RAM cards. With a 060 daugther board and a FAST-RAM card we can awake some more.

Best Regards,
Michael Bernstein

"*" will then try to run everything as if it was a TOS program. Even
text files, etc. Not a good solution.

I tried it again and it doesn't work with EXT2.

>

Unfortunately I'm not a Linux guru, but execute right raises one more
problem: currently you can start MiNT/XaAes/Teradesk without loggin in.

>
> >Selecting the program type in a dialog every time is

In a Linux-like enviroment almost no executable has extension

>
> cu;

Two more thing I recognized:
 - There are files which has no name, only extension (".something").
These files are not displayed in teradesk.
 - It seems to me, that it doesn't follow the links (special type of

files in MiNT), but I'm not sure it is Teradesk

Thanks,
Jozsi

If you do have a Linux machine with net access, you might use that as a
gateway: install a nullmodem cable between the Linux machine and the ST, and
run a PPP or SLIP server on the Linux box, combined with IP routing or NAT.
You won't get ethernet speed that way, but the required hardware is cheap
and you need no new software.

cu

I can't locate the original thread but there was a request for a photo of the 68060 upgrade in my Milan.

http://www.flickr.com/photos/31023463@N00/346500674/in/photostream/

Not sure how useful it is.

To be more precise, I have one PC up and going at the moment, a dual-boot setup with Mandriva 2007 Linux and Windows 98SE. I use Linux for almost all of my Internet activity. I only use Windows for those few programs that I like to use that don't have Linux counterparts.

I could do as you suggest, but I'm more inclined toward getting the STE back on the Internet on its own. If I'm going to be feeding it from the PC, it just seems like I might as well just use the PC in the first place.

You probably can - however, *I* don't know how to, and at the time I needed this, I was running Windows 98, which did not quite have the required routing capabilities.

I my case, I needed to provide both direct UUCP and PPP to the ST - the solution was a small (<50 lines IIRC) shell script on the Unix box that listened on the serial port and provided minimal AT-command emulation. Upon receiving a ATDT command, it would look at the "dialed" number and fork the right server program - the ST would not even notice that there was no modem connected anymore.

On Windows, I would have had to write a C program to achieve this.

I must learn to be more exact. You can use Windows/2000 and XP Pro as dial in servers, should you happen to have a Windows box to hand rather than a Linux box. However you may have issues getting performance out of the ST Com ports. I am not familiar with the Mega STE but you might be OK if it has an has an Apple type serial port (are these called LAN) as these will run faster.

However I am pretty sure the EtherNat is way faster and can go into a router no bother.   ....

Nope, not a good choice of OS at all...

You would for UUCP, but I think for general networking , i.e. TCP/IP you
would be OK. And in this case its all the OP wanted....

I had a MegaST 4 connected with a 33k modem, I don't see why a 56 would'nt work. It should be faster :-) The only thing to take in consideration is that to achieve maximum speed, you'll need Hsmodem to speed the serial ports up.

Cheers,
Jef

> HS modem is that software?

Yes. High Speed modem. An AUTO folder program that replaces the serial routines from TOS. Without it, you're stuck at 19k or somesuch. You will find it at any Atari FTP server. I think it comes with a new serial configuration CPX so you would also need Xcontrol. But I may be mistaken. It's been years.

Cheers,
Jef

FamilyNet International Newsgate

Just a brief run down, what are the keyboard solutions for the Atari TT/Mega STe when it comes to adapting other "PC" keyboards to work with it?

Not a big fan of Atari keyboards and mine is only partially working with it anyway.

Thanks!

I don't know if the software archive contains English docs. If it
doesn't, you can get them from the Misc page onmy web site.

I liked the original A1000 keyboard, especially the recessed
keyboard "well".

Can't say I cared too much for the A1200 or A2000's keyboards
though... :(

Unless things have changed, he won't be able to get higher speeds without changing some things:

1. Faster CPU
2. Hardware mod to the serial port
3. and HSModem

I'd be happy if I'm wrong about this though! :)

Mm. You're probably right. I must have been mixing up with the TT030.
Sorry about that.

Boy! 19200 bps. Was it _that_ slow?

NP, and the Mega STe and TT030 do have the higher speeds. Much higher,
especially the TT.

> Boy! 19200 bps. Was it _that_ slow?

Yep, sure was, although it seemed like warp 9 back in those days. :)

Finally the recasing of my Falcon is completed (actually the floppy
drive still need to be connected) I can offer my free time for testing.
What I currently have:
CT60@95Mhz (with CTClock)
HDDriver 8.13
Spin
NVDI (latest release)
N.Aes/N.Thing (latest releases)
XaAes/Teradesk (latest releases)
Spin! / Metados
MiNT 1-16-3
15GB HDD (2x1GB partitions, the rest is one EXT2 partition)
LG Dual layer DVD writer

Zip drive (100MB, SCSI)
HP 12/24 SCSI DAT (not installed currently)
Jaguar TeamTap (1 piece)
Jaguar controllers (4 pcs)

On request additional software can be installed like BlowUP, etc...
I can test both VGA and RGB output easily.
(EtherNAT / CTPCI have already been ordered)

If required I can test applications on the following computers also:
1040STf
MegaST 4
MegaSTE
TT030
Falcon030 (stock)

I use to have a 56k connected to my Mega STE4 with HS modem(and then a TT030). I usually got 48k speed with them on my old isp.

If you have high speed (DSL/Cable) on a pc at home now, you might want to wait and get an Ethernet adapter.

Hi Ronald!

The A500 and A500plus integrated Keyboard is also exceptional, IMHO.

Kind regards,

Daniel Mandic

Haven't found many carts for the ST except...

Spectre GCR (Mac Emulator)
VT100 Terminal elmulation cart
Various clock and calendar carts

Well not many. The carts only held 128K and while that would be awesome in the Atari 8 bit world, that wouldn't hold ST Star Raiders. Trust me, I would like to make a ST Star Raiders cart. But the Atari ST cart port is a GREAT way to get information into the ST very quickly. So in summary, bad as a game cart medium, good for a transfer pathway.

Hi all,

Just a quick message to warn people about the guy "selling" IDE interfaces at paskud.pl: I sent him the money 3 months ago (in october), I had to wake him up 2 or 3 times during that, all I had as excuse was "I'm very busy, Atari is my hobby, don't have time to test, etc ...". Well, all I can say is that I got the International Bank Account Number real fast ... but nothing in exchange ! You've been warned.

Plus, I asked for a refund via paypal but so far nothing, zilch, nada, rien.

Several people complained here about excessive prices for Atari upgrades. I think they need to consider the quality of the product and the ability of the maker to deliver the goods (you know who they are).

199 Polish is roughly $67 US (It's about a 3 to 1 ratio). Add
shipping, and you are probably talking about $75 - 80.

There's a difference between Connect speed, which is dependent on line
quality, and modem to computer transfer speed BTW.

To get the best results the OP will need the port speed doubler mod and
the hsmodem driver - IIRC that will give him at best 28800 or
thereabouts.

I'm not trying to put him down technically speaking, the guy's certainly very
good. What I can't seem to understand is:
 1) If you don't have the product, then why ask for the money ? From the web
page, I assumed the cards were "in stock" and he never said otherwise, from
the emails I got from him.

2) If he wasn't sure about the availability or robustness of the cards, why not send a quick message about it ?

If what you're saying is true, maybe I've been overreacting a bit. But still, I wasn't used to this ...

You are NOT being unreasonable.

Technical achievement or not, if you've paid for it you should have it.
Kind of ruins the buying experience too when you're looking forward to
something and are excited about it.

Last few 1.44 kits and PeST adapter for sale + Few other bits and bobs
listed, proceeds goto future developments.

http://stores.ebay.co.uk/exxos-surplus-electronics

Keep checking as listed items do change.

www.cps-electronics.co.uk is now closed and no longer trading. All remaining sales are being slowly listed on EBay.

BTW, I am changing ISP this month, I will no longer have access to this group. If anyone knows of any free newsgroup servers then please let me know.

Cheers,
Chris

I still have a TT with tower case, other Atari hardware like syquest and floppy external drive, together with a dozen of Mac LCs, Quadra 800 Performa and so on.

I am in Italy, so I think nobody would come here this old stuff, but I already found some italian retrocomputerist that will come take all way, btw I write here in case there is anybody really interested in anything before it's too late.

Long life to ST and TT ^__^

Just got an STE to upgrade my FM.
What games use stereo sound to allow me to test it?

Thanks

I have a meagile 30 if you want it Make me a offer. I just a day ago cleaned
it up, and cleared out all the dust in it. Reformated with HD DRIVER 8 and
it works great.

Hi Atarians,

The latest version of Mup - the powerful Music Notation software from
Arkkra Systems (http://www.arkkra.com) - is now available as SpareMiNT
RPM package. You can download it from here:

http://www.home.zonnet.nl/m.tarenskeen/download/mint/mup-5.3-1.m68kmint.rpm

Have fun !

Very easy? That is not what I hear (unless you are very good with a soldering iron)

I know for me to remove a socket involves cutting off each leg and just unsoldering the pins out. I am not very good and soldering but this does the trick...

Steve mentioned two ways to fix this problem - the second one doesn't
even need you to take the motherboard out of the case??

i once found a document on the web listing the contents of all the
medway boys, pompey pirates, d-bug, ... menu disks for the st. it was
called "megaliST" or something like that. I somehow must have erased it

(arrrrrgh) and CAN'T FIND IT on the web anymore. does anyone have a
similar list or knows where to get one???

hi jimmie,

J>where can i get one for my st?
ask your local atari dealer... (end of joke)

No, for what purpose do you need that disk? For 18 years, I've never
been feeling the need of that disk although I got one with my 1040
STFM in the summer of '88.

J>this is the one with the desktop accessories?
No.

Do you really want to write programs in ST Basic or play with the
turtle???

Please tell us what you are looking for and you will be helped if possible.

Und TTsch�
ps

Yeah that mouse poop is pretty bad stuff.

I recommend white wine vinegar on a cloth. That should get rid of the smell.

Personally I would be VERY careful of downloading it from anywhere other than Microsoft at http://www.microsoft.com/windows/windowsmedia/default.mspx

You never know what you are getting from other sites.

The Anodyne Software web site has been updated, as follows:

ExtenDOS 4 version 4.05 is now available. It fixes problems in CD.BOS, CDaudio and ExtInfo, and increases compatibility with some drives with buggy firmware. A patch to update previous versions to version 4.05 is available from the web page at:
     http://www.anodynesoftware.com/e4/updates.htm

A note has been added concerning a minor problem with CDwriter; see the CD Writer Suite web page at:
     http://www.anodynesoftware.com/cdws4/support.htm

If you are in the habit of accessing the alternate web site rather than the main one, please note that the alternate has been moved to:
     http://www.magma.ca/~anodyne

Roger Burrows

Unlike the crappy ATARI ST, the AMIGA was able to create
really sexy sprites, e.g. a girl looked like a girl on the AMIGA
while it looked like a blocky something on the ST.

So which is the sexiest, most erotic game for the AMIGA???

Note to anyone who wants to reply to this: please remove
alt.recipes.babies from the list of groups, because that's where the
troll keeps track of the replies.

Hi;

What would be the politically correct way to treat the sizes of directory objects that can be retrieved in some filesystems? Should thay be displayed and counted/summed or should they be ignored?

I am not referring to the summary sizes of items -in- a directory, but to the sizes of the objects with the directory attributes and information themselves.

Original Atari desktop ignores them but some desktops and iirc some file-selectors display them. What would be 'proper' ? (I am more inclined to ignoring them, as I do not see that they are useful information).

cu;

Djordje Vukovic <vdjole@EUnet.yu> schrieb :

> What would be 'proper' ?

I think jinnee does it right: let the user choose, if he wants to see the sizes or not. Sometimes I need the foldersizes e.g. for burning CDs. But on big partitions with lots of files it takes much time to add the sizes of a directory and its children.

Gru�,
Karsten

Hi,

Will there be an Atari meeting in Dordrecht (NL) in 2007 ?
Are you reading this Jos ?

I just received a Mega STE. The 1.44 Floppy drive is not working. I have been searching for one. And I understand that its a Epson Smd-340. I have searched for this on ebay and came up with a large list. But I am not sure if any of then will work beause they all have differnt numbers after the 340. Anyone know where I can get one or if you look on ebay will any of those work. Also it needs a keyboard. Anyone know where I can get one?

I think Djordje means if teradesk should show the size of directory entries itself -- i.e. not the content of directory but how much space it takes on filesystem (i.e. 4 KB) if you create new directory. Maybe

I'm wrong :) But in this case I choose ignoring them...

Wow, Dordrecht. I never thought I would see that name in an Atari group. One of our satellite offices is there at the company that I have worked at, and i have been there a few times.

I know this is off topic, but I couldn't not respond...

Geoff

I don't think Jos is still reading Atari newsgroups.

You'd better ask this in the Dutch Atari mailing list.
atari-nederland@yahoogroups.com
Jos post there from time to time.

Doei,

Martin

Sorry for delaying this message, but currently auction is about to end
regarding this simulator of Atari joystick and mouse:

http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&rd=1&item=320064614051&ssPageName=STRK:MESE:IT&ih=011

I'll post details soon regarding this item as I am having trouble with
staying logged in...

I see on a few Modula-2 related sites that TDI Modula-2/ST is available for download. However, the URLs provided are no longer active. Doea anyone know of a valid source? For those helpful types, I know about Megamax Modula-2, and have it, thanks :)

David,

I see some visits to my site from CAB and Highwire.  Would those be from
you?  I'm wondering if the site displayed ok.  I've tried to keep my sites
straight HTML over the years, specifically to allow all browsers equal
access, however, I recently started using a CMS called Joomla, and I don't
know how well it will display in Atari browsers.

Terry

Terry,

Yes I did try, and neither Highwire nor CAB had any luck. Highwire
reported 'header timeout' and CAB just kept waiting.

David

Ugh... that's too bad. I'm going to need to work around that. I don't
have much that is Atari related on the site at the moment, however, the
site should be accessible by everyone, just on general principles.

The development version of HighWire displays the site just fine. So this
is being fixed to everybody's satisfaction :-)

Cheers,
JFL

David,

Only obvious difference seems to be with stik/mintnet

au    Australia     mozilla 4.0 (compatible; atari highwire/0.3.1 stik2)
2006-12-28 03:04:23
be    Belgium  mozilla 4.0 (compatible; atari highwire/0.3.1 mintnet)
2006-12-27 09:52:29

I think that's it, then. I just tried with HighWire 0.3.0 (MiNTnet), and
although the display seems a tad less conformant than 0.3.1, it's OK.

Cheers,
Jef

On the off chance that Dan reads this and thinks that it's his fault,
I should point out that I'm running MagicNet, not STik2.

Well, technically, if someone is at fault, it is me, since it's my site.

OK. I thought Magicnet was MiNTnet-compatible. I must have been
mistaken, then.

Cheers,
JF

In general it is, or was, but MiNTnet has moved on a bit. mintnet.ovl
works with Magicnet, but I use other things that need GlueStik

Hallo Jean-Fran�ois!

JFL>OK. I thought Magicnet was MiNTnet-compatible.

It is, but not fully and may be a little outdated. MiNTNet-versions of
commandline tools like CVS and WGET do work, but the Cab or highwire MiNT-Net
```

overlays don't. For Cab, there's a recompiled Overlay available.

I'm in the long slow process of cleaning out my basement. So far I only have gone through a small portion of the items but enough to start posting it for sale / trade. I put a Web Site together and started posting items to it. I do have a large selection of hardware available but not much is on the site at the moment. I'm hoping in the next 30-60 days to start really get things rolling on the site. The URL to the site is listed below.

Classic Computer and Video Game items for Sale/Trade
http://fmhcentral.freeservers.com

Greetings,

Looking for the following Atari Items...

Atari STe-Falcon RGB type monitor cables.

Used Original Software....
CD Recorder by SoundPool.
Apex Media versions between 2.00 and 2.41.
Digital Home Studio with or without Data CD.
CUBASE CD.
Squash It!
SEURAT.
Hollywood Hustler (game).
DogFight (game by MicroProse).
PhotoShow Pro Falcon.
Guitar Dreams by SoundPool.
4T/FX and D2D Edit (for the Atari Falcon) This is a
early D2D program and I really need a copy of this one!

Hardware.....
Atari Falcon DSP Audio Hardware such as FAD/JAM PRO
and etc.
Non working Atari Falcon computers and related hardware.
ScreenEYE Digitiser for Atari Falcon.
Expose Digitiser for Atari Falcon.
Replay 16 Cartridge and Software.

Also, Looking for all types of hardware upgrades for all
Atari STE, MegaST, Mega STE and Falcon 030 Computers.

Respond in e-mail only please. I will answer any replies, but
sometimes it takes a few days.
Located in USA but Overseas items are welcome!

Will Buy, Trade, or take for free and pay postage.

E-mail detail of item(s) to me at....

phantomm@bellsouth.net

Thanks,
Phantom

Years ago, there was some work on a
version of OASIS above 1.35 that included Web
support.

I have some old e-mails from Oasis 2.11 or something
like that.

Anyone know if any part of this Oasis did work?

I used Oasis 1.35 for along time for News and E-mail.
And still like it.

Haven't been able to get through to ftp://chapelie.rma.ac.be for some time now, certainly since before Christmas.

Is the server down?

Even before Christmas.

>
> Is the server down?

Unfortunately yes and it does seems like it will be so in the near future.

You see, the sysadmins of the RMA are students and every 6 monts or so there is a new sysadmin. In the past they were all very co-operative but the new one is some kind of a stupid guy and isn't that co-operative.

Some time ago the servers of the RMA were attacked by spam (sic. sysadmin). As a result of that he closed down every server, included the ftp-server. He promised when the spam problem was solved he would take a look at the ftp-server again. But since then we (Saka and I) haven't heard from him a single word.

As Saka and I are not affiliated to the RMA there is nothing we can do then write mails to that guy and hope some day he will see the light.

Anyway, I wish all the Atarians a Happy New Year

Oasis 2.x was just a piece of junk. I was one of the few registrated users. There was no way I could make a connection to my ISP. The first few weeks the authors were helping me but soon after that they disappeared.

The newsreader itself was pretty good though.

>
> I used Oasis 1.35 for along time for News and E-mail.

I've used it a long time myself and I did like it. I found it better then Newsie.

Now I using Okami but unfortunately I can't use Okami to post messages as Newswatch can't cope with User authentication of my ISP.

To post I use Troll which does it's job but that's that. It's not that powerfull of Okami.

With Cat I've the same prob as with Newswatch. I can't connect to my ISP.
And yes it's rather hard to set up.
I've tried Cat out a few times (with another ISP) but IMHO it can't
replace Okami yet.

Hey you making any more of these? I take it the PC keyboard and mouse are driven through the ST parallel port and then you load a driver?

FamilyNet International Newsgate

Can anyone recall if people have gotten a Amiga 2000/3000 keyboard to work on the Mega STe or TT030?

I really like the Amiga keyboard, and if I could get it to work on a TT.. that would be berries. :)

Hi!

I have a Cherry Keyboard, going with my A2000 :)

Best Regards,

Daniel Mandic

Hi Martin,

That's a real shame.

Thanks for your and Saka's efforts in trying to get it back up again.
Maybe in a few month's time there will be another sysadmin and it'll
get sorted out.

Version 3.87 of TeraDesk open-source desktop for the 16-bit and 32-bit
lines of Atari computers is available at:

http://solair.eunet.yu/~vdjole/teradesk.htm

This release brings several small enhancements, a number of bug fixes
and an improved hypertext manual.

See the history file for more information.

Have fun.

Well, nothing like December and that Christmas cheer, eh? Here is the list of our winners for this month:

1. 3 month subscription to ST Magazine - Callaghan!

2. Mega STe motherboard - Doc Clu!

3. Guderian (8bit game) - Jelle!

Next months prizes include the following:

1. 3 month subscription to ST Magazine

2. (another) Mega STe motherboard!

Congratulations to our winners, and good luck to all those who call this month! :)

PS I'd better explain Doc Clu's winning strategy - he was the only one who registed more than once for his prize - in fact, he registered multiple times. The program I use to pick winners randomly picks from a list - a caller is obviously going to have better chances the more their name appears on that list. So the more you call and register.... :D

aaahhhhhhhh!!!! so thats how i have a better chance at winning ,,,,
i'm thrilled , my name is callaghan and i have won a three
month subscription!!!!!! yahoo!!!!

i didn't really register multiple times for the simple
sake of not defeating the odds of a fair draw , but
now knowing the tactics ,
i will have to play and register more often...

thanks
callaghan

ps. how do i get my prize????

Simply come by my house and pick it up...   <lol!>

Just kidding, I have an arrangement with Nick at 16/32 Systems. I forward the payment and winners address (you do have the correct address in your use parameters, right?), then he will mail it directly to you.

Congrats! :D

PS If you're still in the hunt for a Mega STe motherboard, don't forget about *this* months prizes - it includes another one!

FamilyNet International Newsgate

Well, it is all about BBS participation. Get on once a day, check the messages, post something, and register for a prize that day. Repeat the cycle the next day.

You get more chances of winning, and the BBS gets a active message base. :)

You have that working on your ST? How did you get that to work? Are the Amiga keyboard only PS/2 keyboards?

As several typing and formatting errors were found in the hypertext manual after the release of this version, files at the home page of TeraDesk have been updated and now contain the corrected manual.

There were no changes to the program itself.

Sorry for the inconvenience.

No, I meant my AMIGA is outfitted with a 'Cherry' Brand Keyboard, my
favourite Keyboards also going with PC.

AMIGA Keyboard is DIN-Norm, AFAIK. Like the older Keyboardconnector of
IBM-PC, before PS/2-Norm.
My TT is with the standard TT-Keyboard, not my favourite type (gum),
but fully cleaned and in proper working order.

I use more my PC Keyboard as you can see :-)....

I think an IBM-PC Keyboard is the easier way for the TT. I heard about
PS/2 to TT adapter, Mouse and Keyboard.

Best Regards,

Daniel Mandic

I just started receiving broadband Internet service through a deal just too good to pass up, but it also means that I've canceled my dialup account. I've been using my Mega STE to access Usenet from time to time, but now that won't be possible unless I can hook up with an Ethernet connection. I've been using versions of Sting and Newsie that I installed years ago, with TOS 2.06 and ICD hard drive software. The STE's internal HD is long gone, but I have two Syquest 200MB removable drives instead. I'd really rather not get involved in installing different HD software, if possible. But, if it's necessary I would at least consider the idea.

In truth, there's nothing Internet-involved that I can do with the STE that I can't do as well or better with my Linux or Windows PCs, but I hate the idea of turning the old girl completely out to pasture just yet. What's available these days to get me back on the Internet with my STE?

Hi TJ,

There's also the 'free' dialup providers to consider. All you pay for is the telephone call.

Another thing that might be an option, your broadband account may come with a free dialup service.

Also, my host provider which has my website provides free IPv6 dialup to it's customers.

Alison

My new provider is a small fixed wireless one-man company, providing
broadband to a rural area where availability has heretofore been spotty.
He doesn't provide dial-up, or newsgroups, as yet. Looking on Google,
there doesn't look like there's many free dial-up providers left but
NetZero. They say I would need to download software, and I don't think
they support Atari, either 8 or 16 bit. Or am I wrong there?

There are a few options. I have a couple of EtherNecs one I built myself, and one Lyndon built. These were being sold by "Fuji_Man" on ebay recently. Try sending him a message via e-bay to see if he has any in stock. You can use those with Sting and Newsie. If you want to make your own all the info is here:-

http://home.arcor.de/thomas.redelberger/prj/atari/etherne/index.htm

Pictures of mine are here :-

http://www.dwade.freeserve.co.uk/atari/main.html

If you have an ASCI port there is also info on using that there.

If you have a separate SCSI adaptor you could try a Dynaport or Falleron. I am not sure if these will work with the Mega STE SCSI adaptor. You would need HD Driver for those.

Lastly if you want to wait a little Lyndon is producing a combined USB and Ethernet interface. Info here :-

http://hardware.atari.org/netusbee/netus.htm

check out the news links for up to date info

Bonsoir :)

Download on my homepage or directly in http://rajah.atari.org/files/
-> dgem10b.zip (1.8 MB) or
-> dfix10b.zip (150 KB) if you already have the 1.0 version

- bugfixes:

  - crash if poison cloud on monster
  - objects thrown and spell casts disappeared in the stairs
  - dying character disappeared also in the stairs
  - redraw problem on characters positions in the party (after loading a saved game)
  - bad text display (memory problem after loading a saved game or another new game)
  - walking did not cost stamina as expected
  - memory corruption after cleaning jobs ('boot of speed' on first character)
- more convenient mouse handling for characters positions changes

Merci � Jean-Luc CECCOLI :)

Sorry for the inconvenience. Hope it will satisfy you.

Voil� !

I'm buying out an Atari warehouse that's been locked up for over a decade! Games & more listed below for ST & 8 Bit!Reserving orders UpFront for Any-Customer! If this lot goes well, I'll buy more Atari lots! Titles listed below I'll get 1, 2 or 3 of. Saving Atari Games from oblivion by PrePaying your order. All are NEW in BOX! If you dont buy Today, I cant save you any Money!E-Mail BenSells@Atari.org or call (503)256-9974!1st come, 1st serve!

Midway Battles and Ultima II are already spoken for.

Prices below are for one copy each.

8 bit titles

decision in the desert; micropose $20
kennedy approach; micropose $20
logo; atari, complete in thick silver box $20
napolean in russia; datasoft $20

st titles

arcanan; no excuses $20
auto duel; origin $50
axe of rage; epyx $20
data manager; time works $20
design idea; time works $20
down hill challenge; broderbund $20
fleet sreet publishing; michtron $20
fools errand; miles $20
frostbyte; microvalue $20
goldenpath; firebird $20
gridiron glory; bethesda $20
lords of conflict; electronic arts $20
manhunter 2; sierra $30
midway battles; tdc $20
olympus; olympus $20
operation clean streets; broderbund $20
people places things; time works $20
phantasm; exocet $20
santa paravia; starsoft $20
sorcerer of claymorgue castle; keypunch $20
space quest; sierra $30
starflight; tpi $20
stock market game; tdc $20
summer games; epyx $20
symbols and slogans; time works $20
tank attack by; artworx $20
targhan; silamarlis $20
ultima II; sierra $60
zynaps; hewson $20

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

For those who do not frequent Atari Age I have announced the technology development (not production) of a new Bankswitching analogue controller for the Jaguar based on a converted PlayStation controller, as the STE and Falcon have compatible enhanced joystick ports I though some of the folks here may also find it of interest. You can find the topic at http://www.atariage.com/forums/index.php?showtopic=98138 or go directly to the webpage at http://sgmelectrosoft.co.uk/hardware/gamepad.htm for more information and a draft technical reference.

I don't know what disks you've seen, but "back in the day" when I used a
ICD Link with Quantum and Seagate disks (50-200Mb disks) with my STs I got
little more than 105-110Mb/s.

This must be a typo. With my first Seagate drive (Megafile 30, RLL) and a standard ST the transfer rate was roughly 450 KB/s. With SCSI drives by Quantum etc. the ST is capable of transferring about 1300 KB/s, the TT about 1800 KB/s.

My dear, I guess that speed is not even available in the internal registers of the MC68000 :)

The TT could handle such speed, somehwere in the 1st level cache.

Otherwise it's more the speed of an U160 or U320 controller, reading out of the HDD-Cache ;-)

Best regards,

Daniel Mandic

Bonjour

Deditor is the dungeon editor for DGEM.
Works on every Atari since 640*400*16c and a modern OS (MagiC advised)

Download on my homepage or directly at http://rajah.atari.org/files/
- dedi100.zip (150 KB)

Snapshot at http://rajah.atari.org/images/snapshots/deditor_snap.png

DGEM 1.0 is finished and it will be released probably tomorrow or
sunday. Please give me time to build an example of a dungeon.
The purpose of DEditor is for you to create and propose new adventures.

As a reminder, DGEM is a dungeon Master clone, running under GEM
environement, with lastest Ataris OS or enhanced emulators.
Better have enough RAM (TTRAM managed) and a modern OS such as MagiC.

You can already download:
- ddoc100_fr.zip (23 KB, french guides)
- ddev100.zip (450 KB, GFA sources)

Snapshot http://rajah.atari.org/images/snapshots/dgem_snap.png

The game uses the old graphics, so you'd better have one of the original
disks of Dungeon Master or Chaos Strikes Back.

Please wait for the next release...

Bonjour :)

The Dungeon Master clone for GEM (latest machines or enhanced emulators for Ataris) is now complete.

Download on my homepage or directly at http://rajah.atari.org/files/
-> dgem100.zip (1.8 KB, 8MB unzipped)

News:
- missiles: thrown objects, spells casting, etherical effects
- last remaining spells
- Chaos' death
- wall items: amalgam, exit, dagger thrower, fireball or venom generators
- trigger for alcoves: activates something if put/remove precise object.
- some bugfixes

Apologizes for the 'thin' labyrinth, but I had no inspiration. Please feel free to edit it, geek it, build your own adventure and propose it to others.

The program is now yours. Hope you'll enjoy.

I suppose I have forgotten some bugs, so there will be some fixes from time to time. If you have suggestions, they are welcomed, but please wait a little time and give me a little period of rest.

Voil�!

--SNIP--

>In the thread reference was made to a ZIP drive being used. Can a
>standard parallel 100Mb Zip be connected to a STf??

As I understand it, no. The Atari parallel interface lacks some of
the connections and facilities for reading signals from the device
to the computer that a full parallel port should have. Only the
SCSI version of the ZIP-drive works on Ataris, via a Link or
similar ACSI>SCSI adaptor.

Regards, /Peter/

You're understanding of this stuff is obviously a lot better than mine.
I'm just a db and software monkey.

> A photo of it would be nice to get the brain working.

I've just pulled this Milan part to take a photo with my newly borrowed digicam. I've don't have a CF card reader so it will take a few days to be able to send you the image. There isn't a lot to see (to my eyes) and it has a heatsink and fan attached. The fan isn't needed.

>The whole idea behind buying the Milan board was the 060 upgrade. I hate
>bugging Uwe, or Michael for that matter as this is a product that is

>isn't an issue. I know the Falcon has similar issues with some
>aftermarket cases and power supplies, and a cap has to be added to the
>reset switch, especially with an Afterburner fitted.

The PSU I fitted was older and grottier than the one in the Milan tower but it worked with the 060.

>I rang out the pins for the mouse using the Super I/O schematics and

The driver is flashed onto the bootblock and is specific to the serial number but you've probably figured that out all ready.

>First and foremost is getting the Milan to boot the 060. I have a
>feeling that learning that curve will aid in getting the Afterburner

>really lost as to modifying the Milan set up. Michael said earlier
>that it looks all current, so don't think that is an issue at this
>point.

At boot it should bleep and flash the keyboard leds (like it does with the 040). I think it will do that even with the 040 TOS/bootblock.

>Sorry for being long winded. No one else to talk to about it :)

Mine is more reliable with Mint (1-15-12) than it is with TOS and is more compatible. This is with both 040 and 060.

I was never able to get the scsi card to work with clock speeds above 25/50MHz but that is the least of your worries at the moment but it might be worth dropping back to 25MHz for the time being.

If I can help with anything just ask, I'm more than happy to pass on what little I know.

Peter

While we are on the subject of Milan accelerating, are there any other ways of getting more speed out of one ?

I have the 060 and ATI graphics card but things ahve moved on since the Milan was designed and I wondered if there are any new tricks that could be applied.

I think Ingo once mentioned adding adding DMA support. Can the bus be accelerated ?

Hi Peter!

X>Only the SCSI version of the ZIP-drive works on Ataris, via a Link or
X>similar ACSI>SCSI adaptor.

IDE(ATAPI) ZIP-drives will work also, either natively on IDE ports (e.g. on the Falcon or Milan) or via SCSI2IDE bridge adaptor on an SCSI bus.

mit freundlichem Gru� aus Ahornberg
Ekkehard

Unfortunately, Windows XP doesn't seem to let you choose tracks and sectors except for the standard 720 k format. That is kind of why I was wondering if there was a utility either on the Atari to format MS-DOS compatible floppies with extra sectors and tracks (as soon as you add extra sectors or tracks with F-Copy Pro on the ST side, the PC doesn't like to read the disks anymore) , or maybe there is some other command to format extra tracks under the MS-DOS prompt, but so far if I change sectors or tracks by even one extra in the XP DOS Prompt, the PC seems unable to format a floppy disk. :P Too bad since most of the games worth playing on my real STe require me to be able to format the floppy ahead of time with extra tracks, so that I can use DCOPY on my PC to write the actual ST disk. I really wish I still had my Falcon, that always worked beautifully for formatting in anyconfiguration of tracks I wanted and still be able to read on my PC! (in FCOPY pro the MSDOS compatible box wouldnt grey out on my Falcon when i added tracks past 79, but on the STe there is only an MSDOS compatible option when I use standard 720 formatting)

yes it does.

click on START
click on RUN
type in "CMD" - press enter
type in "format /?"

someone else even asked the same question a few weeks ago and I even uploaded a batch file example. I have been using XP for a few years now formating all kinda of floppy formats.

www.cps-electronics.co.uk/temp/a-720k.zip

if it won't let you format higher sector counts then your chances are your floppy drive does not support them. I am amazed by how naff floppy drives are today, anything over total generic format and they refuse to work. get yourself a sony MPF series drive and be sure it will work correctly.

I've got a 1040 ST that I was using with MAstertracks Pro. The disc drive
developed problems and I replaced it with a Chinon or TI drive. I have

lately been trying to save my midi files and I am finding on discs with
more than one song the songs are gone! There are song listings but they
won't open up.

I suspect that I am the victim of the floppy drive problem where it will
write to disc when you don't want it to?
Is there a way to reclaim these files?

thanks,

-doug

To ask a silly question, is the disk full ? I've had music programs appear
to save files when the disk is full but it only writes the name of the file
to floppy, of course it can;t write any data as the disk is full... might be
worth a quick check before taking your ST apart.

Chris

This is probably the problem. ST drives used to have a disk change line.
Later ones don't. I think you need to press "Escape" to tell the ST to
re-read the directory, or to force a write. I think there used to be an auto
folder utility to solve this...

Deutsche Version unten. (German version below.)

I have an Atari SM 124 black and white monitor (220V) which I don't need anymore. It works fine; you just need to supply a standard PC power cable. If anyone would like it, it's yours for the cost of postage from 23717 (Germany). Inside Germany, that's 6.90 Euro. It can also be picked up from the town of Sagau (near Eutin); obviously then there would be no postage cost either. If interested, please email sm124 at ryandesign dot com quickly; my aunt doesn't want it taking up space anymore and will throw it away soon otherwise.

Ich habe einen Atari SM 124 schwarzwei� Bildschirm (220V) zu verschenken; ich brauche ihn nicht mehr. Er funktioniert einwandfrei; Sie ben�tigen nur ein normales PC Stromkabel. Sie k�nnen den Bildschirm haben wenn Sie die Portokosten von 23717 (Deutschland) bezahlen; innerhalb Deutschland w�re das 6.90 Euro. Sie k�nnen den Bildschirm gerne auch im Dorf Sagau (in der N�he von Eutin) abholen; dann entfallen nat�rlich auch die Versandkosten. Wer sich interessiert sollte schnellstm�glich eine E-Mail an sm124 at ryandesign punkt com schicken; der Bildschirm nimmt meiner Tante Platz weg und sie wird ihn sonnst wegwerfen.

-Ryan

Hi Chris!

But does XP then read the non-standard floppy? Becasuse I can't get
my son's PC to read 82-track 10 sector floppies formatted on the
Falcon, for instance. Or is there a command-line trick for this as
well?

Regards, /Peter/

> Regards, /Peter/
>

If you have to format floppies on the PC if you want to read them on the
Falcon. It won't work the other way unless you write a MSDOS boot sector to
the floppy. persoanlly I never got that feature to work.

XP is a bit naff on floppy access,there is a program which will write floppy
images (MSA) back onto a floppy to read on the Atari, though the PC will not
read it as its a Atari disk. If you want to read a disc on both machines,
then you will have to format it on the PC. If you are wanting to transfer
files from Falcon to PC, just use normal 1.44 floppies formated on the PC...
not exactly sure what you are trying to do....

Chris

atari holiday sale, buy three, get one free.

offer good till january 1st, 2007.
buy any three titles off of any of our new in the box list of games
for your atari(any atari machine listed, mix or match machines), and
receive a new in the box game from the list below, free. there will be
no substitutions, only what is listed on the free list.

atari 400/800/xl/xe new disk games that qualify for the free game
offer,
arcade II,
adventure pak,

conflict in vietnam,
crusade in europe,
decision in the desert,
dig dug,
f-15 strike eagle,
greatest hits one,
gateway to apshia,
jumpman jr.,
pitstop,
pole position,
space games,
strategy simulations,
superman,
summer games,
silent service.

atari 400/800/xl/xe new cartridge game list that qualify for the free game offer.
necromancer,
pacman(cart only),
super breakout,
tennis,
alphabet zoo,
delta drawing,
space journey.

or receive a new in the box cx-80 atari trackball for the atari models, 2600,7800, 400/800/xl/xe computers/st/tt/falcon 030 computers.

some quantities may be limited. prices subject to change without notice. no substitutions for the free game allowed, only what is listed.
you must by three titles on the same order to qualify for the free game offer.
you can qualify for more than one free offer by doubling, or tripling, etc. your order.
we take paypal, or all major credit cards.
otherwise please visit our website at,
www.atarisales.com click on the ordering information page for more payment options.

thanks,
lance
www.atarisales.com

we also have these in stock right now,

we have a small quantity of the game tapper in stock on a xe super cart board in the ribbed sided cart case.
price, $29.95.
we still have these, only in smaller quantities now,
we only have a few now of these titles left in stock in a xe super cart

shell
with the ribbed side case. they are $29.95 a piece. first come, first
served.
bruce lee,
commando,
hard hat mack,
mean 18 golf,
midi maze,
vanguard.

we have a very limited quantity now of these titles in a xe super cart
shell
with the handle on the back. they are $29.95 a piece. first come, first

served.
bruce lee,
commando,
deflector,
mean 18 golf,
midi maze,
tower toppler

we take paypal, all major credit cards, or please visit our web site

Question 1: Will DJem run on a Falcon/CT60?
Question 2: Where can one now obtain a copy of Dungeon Master?

Thank you and keep up the great work!! :)

Bonjour

> Question 1: Will DJem run on a Falcon/CT60?

Yes.
And it uses TTRAM.

> Question 2: Where can one now obtain a copy of Dungeon Master?

That's your problem ;)
But the game is installed and runs without a copy of DM. It's for legal aspect.

> Thank you and keep up the great work!! :)

Thanks :)

Rajah

Friday, December 15th 2006,

This new release is the result of six months of irregular but always intense work. The audio editor for Atari Falcon becomes more and more stable and reliable with this 2.091 beta version. Many bugs of general use have been fixed.

Studio Son 2.091b is available in the wonderful french language:
http://doyeuxyvan.free.fr/studioson/std2091b/STD2091F.ZIP

BUT Studio Son is back in English !
http://doyeuxyvan.free.fr/studioson/std2091b/STD2091E.ZIP

You can, of course, find the classic 68030 and 68030+68882 versions in these archives.

I have performed a lot of hard tests to check the quality of my algorithms. I have written a lot of different DSP and C programs to obtain correct results. But, it is still a beta version, so be careful with your samples !

This version has been tested with an original Falcon 030 with a 68882 coprocessor. The CT60 card is not officially supported.

Bugs fixed:

- Crashs when filtering under Magic fixed.
- For a resample process under Magic, internal file management fixed.
- Significative noise reduction of plopping sounds as long as you use Studio Son.
- Management improved of AIFF files compatible with Cubase Audio. These files are now saved with a physical size rounded to 1024 bytes multiples. Useful to prevent crackling noise when you import your AIFF files with

Cubase Audio.

- Buggy "Scrub" function rewritten. No crash occurs.
- Reverse stereo bug for a "Scrub" fixed but still in beta test mode.
- Buggy "Cross Fade" function improved. Autocorrection for wrong parameters. The UNDO is also correct.
- Cut, Copy, Paste, Insert and others have their UNDO bugs fixed.
- Bug of the current working folder fixed. (After an Insert for example)
- DSP effect after a Resample and Filtering is now restored with no problem.
- Overall settings saving are now re-enabled ! Up to date, you MUST keep the STUDIO.SYS folder.
- Rewritten "New Sound File" function. You can now create a file with the fileselector, choose a frequency, ...
- Rewritten "Apply Effect" function. Sample gap subtly fixed. Due to the DSP real time application of this function, it is obvious that it remains a very small gap into your final sample. This gap is usually filled by zero values as it has been thought for this rewritten function.
- Markers management bugs fixed. (Delete, saving and loading procedures)
- There was play error with "Preview Cut" function. It's now okay.
- Block selection with SHIFT+TAB to the next marker has been debugged.
- Sample time length is now updated after any UNDO.
- Little bug fixed during a play actived by the space bar with an exported sample from Studio Son.
- Many another minor bugs.

New features and bugs fixed:
(since 2.09b version)

- Resampling function added (Linear Interpolation).
- Resampling function includes a filter and linear interpolation code in only one DSP program.
- You can resample from 2 Khz to192 Khz.
- WAV files opening issue fixed.
- Huge undo bug fixed.
- Huge bug of the volume of mono samples filtered fixed.
- FIR filters (Low Pass, High Pass, Band Pass and Band Reject) up to 2048 coeefficients.
- Resample process can be followed by a LowPass filter up to 1024 coefficients.
- DSP Filter algorithm improved. The speed of the treatment have been increased. Now you can enjoy a good optimization of the filtering process.
- The end of the sample is now truly filtered.
- Vu meter clipping problems fixed.
- The cursor running is now correct when sample frequency is not the same as the system frequency.
- Desktop background pattern modified to improve the work in monochrome.
- Redraw bug of the desktop in monochrome corrected.
- Several dialog boxes fields bugs fixed in monochrome.
- Crashs at very high zoom levels fixed.
- You can now really select all the sample with the mouse.
- You can now really place the cursor at the end of the sample with the

mouse.
- Wrong size of the blocks at the end of the sample corrected.
- You can now create a block with a "one sample" size when you make a long click on a part of the sample.
- New alert boxes for the Filtering and Resampling function.
- New internal undo for the Resampling function.

New function "Resample..." allows you to change the frequency of your samples with a linear interpolation and an optional Low Pass filter.
The "Filtering..." function enables you to carry out FIR filters (Low Pass, High Pass, Band Pass and Band Reject).
This is performed by the DSP 56001 and with Direct to Disk process.

Known bugs:

- Several internal DSP effects can sometimes result in a reverse stereo mode, take care of this.
- No sound when playing very high frequency samples.
- Slowly WAV files opening.
- Selected block after a resampling task is not deleted.
- Sample duration and time counter are wrong when the system frequency doesn't match with the sample frequency.
- You can hear some noise when playing WAV files at fast speeds.
- Unable to reduce physically the size of a sample when you cut blocks.
- Make an undo after the "Replace" function have no effect.
- A lot of useful alert boxes need to be added.
- In the time counter, the value 99 is followed by 10.
- Several little bugs into the sample window.
- The icon of the function "Generate Low Frequencies" differs with the colour of the resolution.
- Little bugs of sample drawing.
- Random error messages when filter steepness is very low.
- It might remain some english translation errors.

If you are using Studio Son on a single TOS, I strongly recommend the launch of ARROWFIX.PRG in the AUTO folder:
http://doyeuxyvan.free.fr/studioson/std2091b/arrfix15/

If you are using NVDI, just run ARROWFIX.PRG after this.
Otherwise, GEM must be copied in RAM with the program GEMRAM.PRG before running ARROWFIX.PRG:
http://doyeuxyvan.free.fr/studioson/std2091b/GEMRAM16/

If you have troubles to run Studio Son under Magic, you can use the patch DSPSLOW1.PRG by Centek included into the package or you can find it here:
http://doyeuxyvan.free.fr/studioson/std2091b/DSPSLOW1.PRG
Don't run DSPSLOW1.PRG if you launch Studio Son under TOS otherwise you might have display or DSP locked issues.

You can also use the nice DSPXBIOS patch by Didier Mequignon:
http://perso.wanadoo.fr/didierm/files/dspxbios.zip
http://doyeuxyvan.free.fr/studioson/std2091b/dspxbios.zip

If you use an external clock, run FDI_INIT.PRG into the AUTO folder:
http://doyeuxyvan.free.fr/studioson/std2091b/FDI_INIT.PRG

FPATCH2.PRG is now included in the package.

You can also download self-extracting STZIP unpacker:
http://doyeuxyvan.free.fr/stzip26/STZIP26.TOS

Have fun !

Yvan Doyeux

And Happy 80th Birthday Granny !

Hi,

You may be interested in the following 0.9.4beta2 ARAnyM version=20
<http://aranym.org/>. Very latest devels have been taken into account.

- The Pack_3D at <http://ebmodel3.atari.org/Pack_3D/> that runs on 3=20
OS/platforms including Windows, Linux and MacOSX.

It contains ARAnyM 0.9.4beta2 version accelerated with OpenGL VDI=20
display and

EmuTOS dated from 2006/02/20
FreeMiNT+XaAES from 2006/09/23
TERADESK 3.86
EB MODEL3 3.62a (only available in this pack)
EB_DUMP 0.9.7
BOXKITE 2.32e
EUREKA 2.12 beta from 2006/09/09 (only available in this pack)
QED 5.0.5
POV 3.1g
ZVIEW beta 7
ZTASK 1.0
MESA_GL 0.93 (derived from Mesa3D 2.6)
CAB 1.5
HIGHWIRE 0.3.0
HYP_VIEW 0.35.2e
TWOINONE 1.51
INTERFACE 2.30
TWILIGHT 2.08
COPS 1.07
TOSWIN 2.6
PAULANG 0.2b

ready to start with.

- The minimum pack <http://eureka.atari.org/MacAranym.zip> that is built =

for MacOSX, Universal Binary (x86&PPC).

Enjoy :)

> GREAT turnout last week - hope to see everyone again tonight!

For those of you with whom I had such a great time chatting Wednesday (or was it Tuesday?) afternoon / evening, know ye that I DID TRY to get in for the Thursday chat last night, but wasn't able to. My Opera-web-browser's "chat" facility -- which turns out to be an IRC client -- sat in "Connecting..." for about two hours and NEVER DID actually connect. Dang. Any speculation on whether the problem is at MY end or the OTHER?

This won't stop me from continuing to try, but whatever's going on MIGHT continue stopping me from SUCCEEDING. :-(

C.

It may seem a silly question, but what should the Step Rate be
set to for the internal 1.44 disk drive in the Atari Falcon?

(I believe it's 6, but not sure.)

Also, would this be the same on all internal and external 1.44
Atari disk drives such as in the Mega STE?

And does any copy protection make use of the Step Rate
in the protection?

Apex Media has some weird copy protection on the disks
before they are registered and am curious if anyone knows
how to back it up?
Reason is I had one set of disks get damaged during setup.
And I think it may be due to the wrong Step Rate set, as
the drive went nuts with the installation disk.
Seems fine on other original disks.

I'd hate to mess up this other original Apex, by using the
wrong backup system. The Apex Manual warns of
damage to the disks if trying to back them up.
But I don't see how.... As long as they are not
written to.

I have another original Apex set, that I'd like to backup, before setting up just in case.

Any ideas?

Not sure but:
every 3"1/2 disk drive has a step rate of 3ms.
old external 5"1/4 disk drive ahd a 6ms step rate. (useful for PC emulation with old software)

Guillaume.

Step rate is just the wait time between the head moving from one track
to another. Its meant to give the head time to settle before
reading/writing. The step rate is set by a byte in the bootsector. The

legal values for this I believe are 2,3,6 and maybe 12ms. I think 6 and 12 are used on 5.25" drives. Good 3.5" drives can be set to 2ms no problem. On not so good drives, or drives that are nearly 20 years old! - if the step rate is set too small, then you risk not being able to read that disk properly again. You could use a sector editor to change the step rate to a higher value (I recommend only 3ms - and dont do this on a disk with a bootable bootsector!) and then try reading it again.

Step rate has nothing to do with copy protection. If you backed up the disks with a sector copier (like FCOPY) then apart from the information thats in the sector gaps, the disks will be identical, including the step rate. If you tried copying the disks with GEM or dragging the files across to disk B... well you know that would be daft ;-)

If your original media got damaged then maybe either your floppy drive is dodgy, or the apex is doing something strange because of the Mega STe hardware. Don't forget - a lot of ST games failed on the new STe computers when they came out, one of the reasons was hardware (like the shifter) differences, but many also because the copy protections failed.

I seem to remember with Apex you had to register the program on the disk and then you could back it up as normal, I seem to remember trying to back it up before I registered and it damaged the disk as has happened with yours..

>

The things I do on a ST only need about 20 Mb.

If I want to do more, I use a modern computer.

Henk Robbers wrote:

> The things I do on a ST only need about 20 Mb.

The things YOU do, but others have other needs.

Anyway, it was said that supporting more than 1 GB would cause problems for the ST because it was non-standard and fiddly drivers were needed. For more than 15 years external Link-compatible adapters have been working perfectly and the ST does not see these adapters as non-standard, as claimed. The ST does not see these adapters at all, only the driver software does. As far as the drivers are concerned every major driver supports the Link, which means that there are at least 4 established drivers. Looking at the major drivers AHDI is the only one not supporting the Link.

There may be reasons not to support more than 1 GB, but the ST's hardware or the drivers have never been a problem.

Hi,

The <http://eureka.atari.org/MacAranym.zip> configuration was updated.
ARAnyM means "ATARI Running on Any Machine" <http://aranym.org/> is
the Virtual Machine that also runs hosted by MacOSX.

ARAnyM is GNU/GPL. The package built by myself is ready to launch.

The version is "Universal Binary". The performances are the same on
PPC and Intel machines.

MacAranym was updated with a 0.9.4beta2 and a recent and 040 optimized
version of the fVDI graphic driver. Redraws will be faster.

Enjoy it :)

Best ATARIan regards,

Hello,

> Is SCSI arbitration turned on in HDriver software? Just a thought.

Yep, it is turned on.

Roger Burrows, the author of the ExtenDOS, told me :

| > When they are all connected in a chain, the computer always crash
at start-up.
| > I've tried a lot of combinations in my auto folder, but everything
fails. Is
| > this normal ?
|
| I don't know if this is 'normal', but unless spin uses the scsidrv
interface,
| it's not surprising. The Daynaport driver needs to talk to the SCSI
bus from a
| timer interrupt and if there is other i/o going on, this will
undoubtedly cause
| a crash of some kind. "

He's a really good guy :). always helpfull.

I want to know if somebody uses the same set-up as me, with succes ?

Regards,

Mark

I think things are a bit more complicated. I am not sure anymore if
SPIN! uses the XHDI interface to access devices, but I think so.
Provided that SPIN! exclusively uses XHDI calls and provided HDDRIVER 8
is used there should be no potential for a crash. HDDRIVER 8 (but not 7)
routes all XHDI calls through the SCSIDRV layer, which effectively means
that XHDI and SCSIDRV calls should not collide.

That sounds like good advice for the Dallas DS12887 chip, but I think most
stock Falcons (at least those from Atari) came with the ST MK48T87B RTC
chip, for which the DS12887 is a pin-compatible replacement.  As another
poster has said, it is fairly easy to pop the plastic top off of the
MK48T87B
and solder in a new battery, as suggested below; there's a photo on Didier
Mequignon's CT60 page showing that done on a CT60 mobo (different board,
same problem and same chip) here:

http://perso.orange.fr/didierm/ct60/index-e.htm

Hi Rustynutt,

First, you won't need to solder anything to add a mouse. There is a connector
on the board but it will need a short adapter since it is a set of inline
pines just above the pci slots at the edge of the board. I dont have the
Milan manual to hand.

I had lots of problems getting the 68060 to boot and it was all caused by
the original PSU, it didn't ramp-up the voltage fast enough to cause it
to boot. I had to try another psu.

My Milan behave oddly without a floppy connected.

Regards,

Peter Slegg

Sure. Here are the updated specs on my system

Atari 1040STE Running BBS Express ST
1 4 Gig Had drive.
1 Yamaha CD Burner
